Dear Forbes Advisor team,

Forbes Advisor is building insurance propositions it owns end-to-end, and you need a product manager who can hold the commercial model, the partner relationships and the customer funnel in one view at the same time. That is the kind of role I have been doing for 13 years.

At EMIL Group I owned the Claims Center from concept to production on a B2B SaaS platform serving insurers, reinsurers, brokers and underwriters. When I joined, an 18-person delivery organisation was losing its senior engineers and its client trust. I restructured it into three lean teams, stopped the attrition, and cut time-to-market for a new insurance product from months to under a week. Earlier, at AOK ITSCare, I migrated a legacy procurement system to Shopware for three AOK public health insurers and around 20,000 employees, a product still running in production.

The posting specifically asks for someone comfortable with partner APIs and integrations, and that has been a recurring part of my work. At CLINET Platforms I owned the CGM (CompuGroup Medical) hospital information system integration that took a digital anamnesis from 30 minutes to 5. At Rohde & Schwarz I drove a GitOps pipeline that cut rollout time from days to 30 minutes across multinational teams. I am used to sitting between Engineering and a third-party partner and keeping both sides moving.

On the funnel and data side: I instrument what I build. At Rohde & Schwarz I ran two competing workflows in parallel and used the click data to kill the wrong one. At construct8 I track conversion in SQL across a WhatsApp and Telegram funnel with LLM agents handling the day-to-day. The Forbes Advisor role asks for someone who will own tracking, drive experimentation, and close the loop post-launch, that is how I work on every product.

I am based in Berlin, work remotely, and can start within four weeks. I would be glad to talk through how I would approach the proposition you are building.

Best regards, *Philipp Hilbert*
