Dear Reiz Tech team,

I am applying for the Product Owner role at Reiz Tech. I have 13 years of product ownership in regulated B2B environments, including insurance, healthcare, public-sector data platforms, and fintech. The focus on lending and financial services in your posting lines up well with that background.

At EMIL Group I owned a B2B SaaS platform serving insurers, reinsurers, brokers, and underwriters. That meant working daily with clients who had real compliance constraints, explaining prioritisation decisions to senior stakeholders without always having complete information, and keeping a delivery organisation aligned when the roadmap had to change. When I joined, the team was losing engineers and client trust at the same time. I restructured it, rebuilt the trust, and shipped the Claims Center from concept to production. The time to launch a new insurance product went from months to under a week.

The part of your requirements I want to address directly: turning customer conversations into product decisions. At CLINET Platforms I inherited a backlog that a five-person team could not deliver. I ran discovery sessions with hospital staff, cut the roadmap to the top 10% of features against agreed success measures, and user acceptance rose more than fivefold. At Bundesagentur für Arbeit I used workflow analysis to redirect platform strategy entirely, which increased pipeline runs by 200%. In both cases the decision came from talking to users and measuring what happened next.

You mention that experience in financial services and data privacy awareness are advantages. My fintech background includes co-founding Kvitt Payment Solutions, a mobile P2P payments product that was acquired and operated by Sparkasse inside the girocard ecosystem. I have worked with GDPR constraints across every role and held a Deputy IT Security Officer title at the Federal Employment Agency, where data handling for national labour-market analytics carried real regulatory weight.

I work well in agile teams, I give feedback as directly as I want to receive it, and I am open to learning how your specific team operates. I would welcome a conversation about the role.

Best regards, *Philipp Hilbert*
