Dear Birdie HR team,

I am applying for the Product Manager role. I have 13 years of product ownership across insurance, public-sector analytics, healthcare, payments, and defence AI, regulated environments where incomplete information is the norm and clear specifications are the difference between a team that ships and one that stalls.

The data and analytics side of this role is where I spend a lot of my time. At the Federal Employment Agency I owned a national labour-market analytics platform: I introduced Dagster and dbt to make quarterly data imports run without hand-holding, and I integrated test automation into the Jenkins pipeline to free QA hours every week. At Rohde & Schwarz I instrumented two competing UI workflows to settle a design argument, the data showed that the visually polished option recorded exactly zero clicks, which redirected the entire platform strategy and increased pipeline runs by 200%. I bring that same instinct to A/B test design and funnel analysis.

On the technical side, I can read API documentation and request/response structures, reason about backend configuration and how it shapes frontend behaviour, and spot integration risks before they reach a developer. At CLINET Platforms I owned the CGM interface into hospital information systems, which required working through complex integration specifications and coordinating with external technical partners. I have shipped production work across REST APIs, PostgreSQL, Docker, Kubernetes, and CI/CD pipelines, which means I can write specifications that developers can act on without coming back for clarification.

The insurance domain is one I know from multiple angles: at EMIL Group I ran an 18-person delivery organisation building a B2B SaaS platform for insurers, reinsurers, brokers, and underwriters, and at AOK ITSCare I owned a B2B procurement webshop for three insurance organisations and roughly 20,000 employees. That background means I understand how platform configurations in insurance products propagate into user-facing behaviour.

I am available at short notice and happy to discuss the role in more detail.

Best regards, *Philipp Hilbert*
