Dear Sphera team,

Chemical management software sits in a regulated space where a missing field or a misunderstood compliance rule is not a UX inconvenience, it is a customer risk. I have spent 13 years as a Product Owner and Product Manager in environments where that pressure was constant: healthcare workflows at CLINET Platforms, labour-market data for German federal policymakers, defence AI for the FCAS programme, and insurance B2B SaaS at EMIL Group. In each case my core job was the same as the one Sphera is describing, translate what Regulatory, Professional Services, and end users actually need into requirements Engineering can act on.

The Sphera posting specifically calls out product re-architecture and modernisation. At the Federal Employment Agency I led a full migration from a bare-metal system to containers while simultaneously running a large ETL migration and a UI relaunch, three threads that touched every team, all running in the same period. At Rohde & Schwarz I shifted the platform strategy from UI-led to developer-code-first after workflow instrumentation showed the UI approach was generating zero adoption. Both cases required keeping stakeholders with very different incentives aligned on a single backlog priority while the architecture underneath them changed.

On the requirements side: I write user stories and acceptance criteria as working contracts, not summaries. At CLINET Platforms I cut a backlog to the top 10% of features against agreed success measures, and user acceptance rose more than fivefold. At Scheidt & Bachmann I moved research outputs into production across a fully SAFe setup with agile release trains and PI planning. I am comfortable in both fast-moving Scrum teams and larger scaled-agile environments.

I have also been building with AI tools for the past two years, Claude Code, GitHub Copilot, Cursor, and others, to accelerate research, analysis, and documentation. For a role that lists AI tooling as a nice-to-have, I can bring that into requirements drafting and edge-case generation from day one.

I would be glad to walk through any of these projects in more detail.

Best regards, *Philipp Hilbert*
