Dear 4MK Solutions team,

I am applying for the Senior Product Owner role. I have 13 years of product ownership in regulated industries, insurance, public-sector analytics, healthcare, defence, and payments, and the work you describe maps closely to how I have operated across all of them.

The role asks for someone who can gather functional requirements from clients, write user stories, manage the product backlog, and keep the development team focused sprint by sprint. At CLINET Platforms I inherited a backlog a five-person team could not deliver. I cut it to the top 10% of items against agreed success measures and user acceptance rose more than fivefold. At EMIL Group, an 18-person delivery organisation was losing client trust; I restructured it into three lean teams with their own leads and shipped the Claims Center from concept to production in the same period. In both cases the work was exactly what this posting describes: align with stakeholders, write and rank the backlog, run Scrum ceremonies, accept or reject work against clear criteria.

Your requirement for experience with analytics projects also fits directly. At Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt to remove manual steps from quarterly imports, and saved nearly 75% of the time per data update. At Rohde & Schwarz I managed the AI and data platform for the FCAS European programme, increasing pipeline runs by 200% by redirecting strategy based on user workflow analysis. Both roles required me to hold the technical and the business conversation at the same time, exactly the liaison function this role describes.

I write and speak English at C2 level and have worked in international, distributed teams throughout my career. I am comfortable reporting to executives and to technical leads in the same day.

I would be glad to walk you through any of these projects in more detail.

Best regards, *Philipp Hilbert*
