

Philipp Hilbert. *Resource Planning Product Owner who ships.*

Positioning, B2B SaaS product operator with a decade of translating complex operational workflows into scalable software – now bringing that rigour to workforce and resource planning.

§ WHY UNIT4

Unit4's focus on people-centric ERP sits at the intersection of two things I care about: software that removes operational friction from daily work, and product that serves real workflow complexity rather than simplified abstractions. The Resource Planning domain specifically – allocating, scheduling, and optimizing a workforce across project-centric organisations – maps directly to the kind of structured workflow decomposition I have done across defence, public sector analytics, and InsurTech. The job description's emphasis on translating business needs into measurable product outcomes, not just feature lists, signals a team that thinks about impact before backlog items. *That is precisely the kind of product environment where systematic discovery and delivery discipline compound.*

§ HONEST FRAMING

My experience in ERP and formal Resource Planning tooling is limited to adjacent domains – workforce allocation logic I have reasoned about from the customer and operations side, not from inside a dedicated RM or PSA product. Where I am strong is in translating operationally dense, multi-stakeholder workflows into structured software requirements – the underlying mechanic is the same whether the domain is labour market analytics, clinical patient flows, or project-based workforce allocation.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, stakeholder communication
 - **GitHub Copilot**, in-repo development support and review
 - **GPT**, research synthesis and structured requirements review
 - **Cursor / VSCode**, LLM-assisted code exploration and feature walkthroughs
 - **Lovable**, rapid front-end prototyping for concept validation
 - **Framer**, design-heavy mockups and interactive wireframes
 - **Gamma.app**, internal product decks and stakeholder presentations
 - **n8n**, agentic workflow automation and integration prototyping
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Ionic, CGM API integration, low-code insurance platforms.

§ HOW I WOULD WORK AT UNIT4

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow customer success calls and read existing backlog items to build a ground-level map of how organisations currently describe resource allocation pain – what the tickets say versus what stakeholders actually mean.

WEEK 2

Align on priorities.

Run a structured prioritisation session with engineering and UX leads to surface hidden assumptions in the current roadmap and flag the highest-ambiguity items before the next sprint cycle begins.

Ship, close loops.

Take ownership of a well-scoped backlog slice end-to-end – refine user stories to acceptance criteria, support engineering through delivery, and confirm measurable impact with the customer success team post-release.

I COVER LETTER

Dear Unit4 hiring team,

Resource planning problems are hard not because the logic is complex in isolation, but because the people, priorities, and constraints involved are always moving. I have spent the better part of a decade untangling exactly this kind of operational messiness – across a multinational defence programme, a public sector labour market analytics platform, and a B2B InsurTech product serving primary insurers, reinsurers, and brokers simultaneously. Each of those environments required translating dense, multi-stakeholder workflow logic into dev-ready requirements that teams could actually deliver against. That translation work is the core of what I do well.

At Rohde & Schwarz, I was the sole Product Manager on a government-contracted AI and data management platform for the FCAS programme, responsible for full-cycle delivery across a cross-functional team of architect, data scientists, and frontend and backend engineers. I introduced GitOps practices that cut deployment times from several days to under forty minutes, and I independently unblocked an infrastructure-level issue in OpenShift that the project lead had been escalating to engineers for over a year – delivered in one week. The pattern there was not heroics; it was systems thinking applied to a delivery bottleneck, which is what product work actually demands at the engineering seam.

At Emil Group, I inherited a 17-person scrum team in near-collapse – client trust broken, sprint discipline gone, senior engineers leaving. I split the team into smaller focused units, re-introduced velocity tracking, structured refinement, and ownership concepts, and ran weekly product workshops to rebuild transparency with the client. We went from near-total senior attrition to a single departure over the subsequent months. The Claims Center module I designed and delivered in that period went from concept to production rollout during one of the most turbulent periods the team had faced. Delivery stability is not accidental; it is a product discipline.

The Resource Planning domain at Unit4 is one I approach with genuine curiosity and honesty about the learning curve. I have not owned a dedicated workforce scheduling or PSA product before. What I do bring is a decade of decomposing operationally complex, multi-stakeholder processes – labour market forecasting at the federal level, clinical patient flow at the hospital level, policy issuance and underwriting at the insurer level – and turning them into software

that users actually adopt. Resource allocation logic is, at its core, a constraint-satisfaction problem with a human layer on top. I have been living in that space under different domain labels for years.

Unit4's stated purpose – improving how people work by focusing on what truly matters – is not marketing language I can dismiss. It describes a real product philosophy, and it is one I recognise from the kinds of product decisions I have valued in my own work: fewer features with sharper impact over more features with diffuse coverage. I would like to contribute that thinking to the Resource Planning domain and help Unit4's mid-market customers spend less time managing their workforce tools and more time on the work that actually matters to them.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience converting complex operational workflows into scalable, delivery-ready software. Background covers AI data platforms, public sector analytics, B2B InsurTech, mobile healthcare, and founder-level company building. Fluent in Agile delivery, cross-functional stakeholder alignment, and AI-native product execution. Comfortable in ambiguity, high-pressure delivery contexts, and environments where requirements are still being discovered. Brings structured discovery discipline and hands-on technical fluency to every engagement.

§ CORE STRENGTHS

- Translating complex multi-stakeholder workflows into dev-ready requirements
- Backlog management, sprint discipline, and delivery velocity recovery
- Cross-functional alignment across engineering, UX, QA, and customer success
- End-to-end feature delivery: user stories through acceptance criteria to GitOps rollout
- AI-native product execution and rapid prototyping
- Stakeholder communication and workshop facilitation in regulated environments
- Data-driven product thinking and KPI-oriented prioritisation
- Technical fluency across modern cloud and SaaS delivery stacks
- Founder-level pragmatism and high-agency execution under ambiguity

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Led end-to-end delivery of an AI and data management platform for the FCAS European defence programme, managing a cross-functional team of architect, data scientists, and backend and frontend engineers
- Delivered autonomous feature sets from user stories through acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Independently unblocked an infrastructure-level issue in OpenShift that had been escalating for over a year – delivered in one week
- Built data provenance and audit trail capabilities enabling SafeAI and ExplainableAI-compliant ML training and evaluation
- Managed multinational stakeholders and ensured data transformation, transparency, and auditability across delivery cycles

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features on the Arbeitsmarktmontitor analytics platform including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Designed interactive dashboards and community features serving regional labour market stakeholders
- Introduced Dagster for automated ETL and indicator generation, standardised CI/CD with full test integration
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout on a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters

- Split a bloated 17-person Scrum team into focused delivery units, reintroduced velocity tracking and structured refinement, and reduced senior developer attrition from near-total to a single departure
- Regained client trust through structured communication and weekly product workshops in a prototype-stage environment
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first pilot app for hospitals across iOS and Android covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
 - Integrated CGM interface into hospital information system workflows and managed external legacy API dependencies transparently with stakeholders
 - Led a small team under tight deadlines with strict prioritisation of highest-leverage features
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype; later acquired and operated by Sparkasse

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; setup time under two minutes with no technical knowledge required by end user
- Served as deputy IT security officer; produced a public English-language product presentation (YouTube) demonstrating business-level communication

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO & Head of HR / CFO & Project Lead

- Full establishment of digital tooling, financial and investment planning, HR, ERP introduction, and investor relations for a nanotechnology vertical farming startup

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policy configuration
