

Philipp Hilbert. *Product Owner, supply-side healthcare marketplace.*

Positioning, ten years of product ownership across regulated software platforms, now focused on digital tools that improve how healthcare professionals work.

§ WHY DOCTARI

The supply side of a marketplace is the hardest side to get right: the professionals using your app carry real cognitive load between shifts and have zero tolerance for friction. The job description calls for someone who can own the doctari App end-to-end, drive data-driven discovery, and integrate AI into both the product and the delivery process — that is the exact combination I have been building toward across regulated B2B platforms for the past decade. What draws me specifically is the sentence "make a real difference in the daily lives of healthcare professionals": that is a concrete outcome, not a positioning claim.

That is exactly the kind of accountability I look for in a product role.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis and spec drafting
- **GPT**, edge-case generation and user story review
- **GitHub Copilot**, in-sprint implementation support
- **Cursor / VSCode**, in-repo refactors and code review
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy mockups and stakeholder walkthroughs
- **n8n**, agentic workflow automation
- **Gamma.app**, async stakeholder communication

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, JavaScript, PostgreSQL, MongoDB, AngularJS, Ionic, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Jenkins, Dagster, dbt, DuckDB, Redpanda, OpenShift, Helm, GitOps, Bitbucket, MicroStrategy, CGM API integration, low-code insurance platforms.

§ HOW I WOULD WORK AT DOCTARI

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the app squad and customer-facing teams, read the backlog against the KPI dashboard, and map where the supply-side funnel loses healthcare professionals – specifically looking for the discovery and activation steps the posting flags as key growth drivers.

WEEK 2

Slice the backlog.

Reorder the backlog around the three or four items with the strongest combination of user pain and measurable supply-side impact, write sharp acceptance criteria, and align with engineering on feasibility so the next sprint starts from a clean slate.

WEEK 3+

Ship and instrument.

Deliver the first increments with tracking baked in from day one, run a short retrospective with the cross-functional team, and close the feedback loop with one structured user interview session per release cycle.

I COVER LETTER

Dear doctari team,

I am applying for the Product Owner role owning the supply side of the doctari marketplace. My background is ten years of product ownership across regulated and operationally complex platforms – public analytics, AI data management for defence, InsurTech SaaS, and mobile

healthcare applications. I know what it takes to earn trust from engineering teams, keep a backlog honest under delivery pressure, and turn messy operational workflows into features that real users actually need.

The role that maps most directly to what doctari is asking for is my time at CLINET Platforms, where I owned a mobile-first healthcare app for hospitals across iOS and Android. I delivered core flows for digital anamnesis, meal and therapy plans, patient transport, chat, and document storage – shipping against tight deadlines while managing legacy API integrations with hospital information systems. That work required the same combination you are asking for: deep collaboration with engineering, stakeholder alignment across clinical and technical teams, and a ruthless focus on what actually reduces friction for the end user.

At Emil Group, I inherited a stalled InsurTech product with a bloated 17-person team and near-total senior developer attrition. I split the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops that rebuilt client trust within weeks. The ability to stabilise a delivery environment while continuing to ship is something I have had to demonstrate more than once – it tends to matter most exactly when a product is in a growth phase and moving quickly.

On AI integration: I use AI-native tooling daily, not as a productivity footnote but as a core part of how I work. I prototype flows in Lovable, draft specs and edge cases with Claude and GPT, and use GitHub Copilot inside sprint work. At Rohde & Schwarz I delivered an autonomous feature set end-to-end – user stories, implementation, testing, and GitOps rollout – in a team where I was simultaneously acting as the product voice and the practical unblocking force. Integrating AI into both the product and the development process is something I am already doing, not something I am planning to learn.

I am a German native, C2 in English, based in Berlin, and available in four weeks. I would welcome a call to talk through the supply-side roadmap and where I could add the most value earliest.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with nearly ten years of experience delivering digital products in regulated, operationally complex environments. Strongest in taking ownership of an entire product surface – from backlog prioritisation and discovery through to release and

instrumentation – and in maintaining delivery stability while a team scales. Equally comfortable as the technical voice in a business conversation and the product voice in an engineering discussion. AI-native workflow has been part of daily practice for several years, applied concretely to prototyping, spec quality, and autonomous feature delivery.

§ CORE STRENGTHS

- Mobile and web app ownership across the full development lifecycle
 - Data-driven product discovery and backlog prioritisation
 - Agile delivery stability: sprint discipline, velocity, refinement
 - Cross-functional stakeholder alignment across engineering, UX, and business
 - AI integration into product and development process
 - Workshop facilitation and user research synthesis
 - Healthcare and regulated-environment product experience
 - Rapid front-end prototyping and LLM-assisted specification
 - Founder-level pragmatism: low ego, high agency, fast decisions
-

§ PROFESSIONAL EXPERIENCE

CLINET PLATFORMS 2021, 2022

Product Owner – Mobile Healthcare App

- Delivered core app flows: digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows, managing legacy API complexity with external databases
- Led a small cross-functional team under tight deadlines with strict prioritisation of highest-leverage features
- Built stakeholder trust through transparent communication of technical constraints and delivery risk

EMIL GROUP 2022

Product Manager – InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers
- Re-established sprint discipline by splitting a bloated 17-person team into focused Scrum units with clear ownership

- Reintroduced velocity tracking and structured refinement; reduced senior developer attrition from near-total to a single departure
- Regained client trust in a prototype-stage environment through weekly structured product workshops

ROHDE & SCHWARZ 2024, 2025

Product Manager – AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets within the European defence programme FCAS
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager – Public Data Analytics

- Delivered new features on the Arbeitsmarktmontitor: labour shortage analytics, regional comparison tools, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Migrated legacy systems to Kubernetes and served as Deputy IT Security Officer with responsibility for compliance and data lineage

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; USP was setup under two minutes with no technical knowledge required
- Served as deputy IT security officer; responsible for backup, restore, checkpoint, and data-encryption product decisions

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Founded a group-based P2P payments product built on a P2P backbone; owned PSP integration, full UX/UI design, and mobile app prototype
- Product was later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
