Dear doctari team,

I am applying for the Product Owner role owning the supply side of the doctari marketplace. My background is ten years of product ownership across regulated and operationally complex platforms – public analytics, AI data management for defence, InsurTech SaaS, and mobile healthcare applications. I know what it takes to earn trust from engineering teams, keep a backlog honest under delivery pressure, and turn messy operational workflows into features that real users actually need.

The role that maps most directly to what doctari is asking for is my time at CLINET Platforms, where I owned a mobile-first healthcare app for hospitals across iOS and Android. I delivered core flows for digital anamnesis, meal and therapy plans, patient transport, chat, and document storage – shipping against tight deadlines while managing legacy API integrations with hospital information systems. That work required the same combination you are asking for: deep collaboration with engineering, stakeholder alignment across clinical and technical teams, and a ruthless focus on what actually reduces friction for the end user.

At Emil Group, I inherited a stalled InsurTech product with a bloated 17-person team and near-total senior developer attrition. I split the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops that rebuilt client trust within weeks. The ability to stabilise a delivery environment while continuing to ship is something I have had to demonstrate more than once – it tends to matter most exactly when a product is in a growth phase and moving quickly.

On AI integration: I use AI-native tooling daily, not as a productivity footnote but as a core part of how I work. I prototype flows in Lovable, draft specs and edge cases with Claude and GPT, and use GitHub Copilot inside sprint work. At Rohde & Schwarz I delivered an autonomous feature set end-to-end – user stories, implementation, testing, and GitOps rollout – in a team where I was simultaneously acting as the product voice and the practical unblocking force.

Integrating AI into both the product and the development process is something I am already doing, not something I am planning to learn.

I am a German native, C2 in English, based in Berlin, and available in four weeks. I would welcome a call to talk through the supply-side roadmap and where I could add the most value earliest.

Best regards, *Philipp Hilbert*
