

Philipp Hilbert. *Institutional-grade trading PM with infrastructure depth.*

Positioning, 13 years of regulated-product ownership meets hands-on crypto trading infrastructure, microstructure analysis, and AI-native delivery, built for institutional digital-asset product.

§ WHY SALT

This role sits at the intersection I have been building toward: institutional trading infrastructure, digital assets, and a regulatory environment that demands engineering precision rather than move-fast improvisation. The posting explicitly asks for someone who understands order entry, execution quality, and market structure, not someone who has read about them. I actively trade perpetual futures and spot across Hyperliquid, Bitget, and Jupiter; I study liquidation heatmaps and slippage mechanics on Coinglass and Hyblock; and I have built a backtesting engine and trading bots for crypto markets on my own time. What draws me specifically to Dubai is the regulatory ambition of the DIFC and ADGM frameworks, which are constructing institutional-grade guardrails around digital assets with the same seriousness as MiFID II, the kind of constraint that makes products defensible. *That is exactly the environment where deep product and deep market knowledge compound into something durable.*

§ HONEST FRAMING

I have not held a formal PM title inside a licensed exchange or brokerage. My trading experience is deep but built from the infrastructure and user side rather than from within a trading-platform product organisation. The transferable mechanic is strong: I have repeatedly owned complex, latency-sensitive, regulated pipelines end-to-end, from requirements through architecture decisions through GitOps rollout, and I bring genuine market-microstructure fluency rather than a borrowed vocabulary.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, pair programming across Python and Kotlin
- **Cursor / VSCode**, LLM-assisted development environment
- **Lovable**, rapid front-end prototyping
- **GPT**, analysis, documentation, and edge-case generation
- **Gamma.app**, stakeholder decks and product narratives
- **n8n**, agentic workflow automation
- **Framer**, design-heavy prototypes

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, Docker, ArgoCD (GitOps), Helm, Jenkins, CI/CD pipelines, Python, Kotlin (Spring Boot), Django, PostgreSQL, MongoDB, Kafka, REST APIs, Dagster, dbt, GitLab, Azure DevOps. On the crypto side: Hyperliquid, Bitget, Jupiter, 1inch, Across Protocol, used operationally for perpetuals, spot, DEX aggregation, and cross-chain bridging.

§ SIDE PROJECT

PHOENIX882 / [HYPERION GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal trading-infrastructure suite spanning backtesting, strategy validation, and balancing-market price reconstruction.

- phoenix882.com is a trading-strategy backtesting engine built for crypto markets, designed to evaluate execution strategies under realistic slippage and routing assumptions.
- Hyperion reconstructs marginal prices over merit-order data from the aFRR balancing-market pipeline, an analytics backend in pure Python.
- Liberation of Bajor is a multi-agent coding framework built alongside, used to automate repetitive dev workflows across both projects.
- Directly relevant here: this work reflects the same concerns as an exchange PM, execution quality, price formation, latency, and the data pipelines that make any of it auditable.

§ HOW I WOULD WORK AT SALT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with engineering, compliance, and sales to map the current order lifecycle end-to-end, from order entry through matching, execution, and reporting, and identify where the product's biggest latency, reliability, or regulatory friction lives.

WEEK 2

Prioritise, slice, validate.

Turn the gap map into a ranked backlog slice: one near-term win that unblocks a compliance or sales dependency, and one structural item that will matter in six months; validate both with engineering feasibility and with a trading-desk user.

WEEK 3+

Ship, instrument, iterate.

Own delivery of the first slice through to production, instrument execution-quality metrics at the order level, and use the first real data to sharpen the roadmap before the next sprint cycle closes.

I COVER LETTER

Dear Hiring Team,

You are looking for a product manager who can own institutional trading infrastructure end-to-end and who brings genuine technical and market credibility, not a generalist who borrows the vocabulary from a job description. That specificity is what made this role worth a direct application.

My product career spans 13 years in regulated environments: defence AI at Rohde & Schwarz, a national labour-market analytics platform at the Federal Employment Agency, insurance SaaS at EMIL Group, and a fintech P2P payment product that was acquired and operated by Sparkasse inside the girocard ecosystem. In every case I owned the full arc from discovery through architecture decisions through production rollout. At Rohde & Schwarz I introduced GitOps delivery with ArgoCD across a multinational team and cut rollout time from days to 30 minutes. At EMIL Group I restructured an 18-person delivery organisation under time pressure and

shipped the Claims Center from concept to production, reducing time-to-market for new insurance products from months to under a week. These are the kinds of delivery problems a trading-platform PM faces, latency-sensitive systems, regulated workflows, stakeholder pressure from compliance and sales simultaneously.

On the crypto and trading side, I am not presenting surface-level familiarity. I actively trade perpetual futures and spot across Hyperliquid, Bitget, and Jupiter; I study execution quality, slippage, price impact, and routing mechanics using Coinglass and Hyblock Capital; I have built a backtesting engine and trading bots for crypto markets and a pipeline (Hyperion) that reconstructs balancing-market marginal prices over merit-order data. I understand order management, execution routing, and market microstructure from the inside out, including the infrastructure layer: stablecoins, custody, exchange connectivity, and cross-chain bridging via Across Protocol. I also co-founded Kvitt Payment Solutions, a mobile P2P fintech that was acquired and operated by Sparkasse, and I co-founded Qcrypt AG, where I owned the product architecture for quantum-secure encryption in an enterprise security context.

Dubai and the DIFC/ADGM regulatory framework are a deliberate target for me, not a relocation compromise. I am prepared to work fully on-site and I am available on four weeks' notice.

I would be glad to walk through the trading infrastructure specifics, the gap between my background and a pure exchange-PM profile, and how I plan to close it quickly.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with 13 years of regulated-product ownership, defence AI, public-sector analytics, insurance SaaS, and fintech, who also builds trading infrastructure on the side. I own discovery through architecture decisions through GitOps rollout, work directly with engineering and compliance without a relay layer, and bring hands-on crypto-market fluency: perpetual futures, DEX execution, microstructure analysis, and a personal backtesting and bot stack. Targeting institutional digital-asset product in Dubai.

§ WHAT I CAN DO

Trading and market infrastructure: order entry, execution quality, slippage and routing analysis, perpetual futures, DEX aggregation, cross-chain bridging, backtesting engine design, liquidation and heatmap analytics (Coinglass, Hyblock Capital), Hyperliquid, Bitget, Jupiter, 1inch, Across Protocol.

Regulated product delivery: requirements engineering, user stories, acceptance criteria, backlog refinement, sprint planning, release planning, UAT, Jira, Confluence, Figma, Miro.

Agile and scaled delivery: Scrum, Kanban, SAFe, ART, PI planning.

Technical environments: Kubernetes, OpenShift, Docker, ArgoCD, GitOps, CI/CD, Jenkins, Git, GitLab, Azure DevOps, REST APIs, Python, Kotlin, PostgreSQL, MongoDB, Kafka, Dagster, dbt.

AI products and tooling: LLM agents, agentic workflows, prompt engineering, Claude Code, GitHub Copilot, Cursor, Lovable, n8n, Gamma.app.

Analytics and data: ETL, Dagster, dbt, PostgreSQL, MicroStrategy, Matomo, KPI definition, funnel analysis.

Governance: GDPR, Deputy IT Security Officer, EU AI Act, identity management, budget ownership.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI, FCAS PROGRAMME 2024 TO 2025

Introduced GitOps delivery with ArgoCD across a multinational team; rollout time fell from days to 30 minutes and the platform became hotfix-capable. Redirected a UI-first product to a developer-code-first design after instrumented user research showed zero adoption of the original path.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC-SECTOR ANALYTICS 2023 TO 2024

Integrated test automation into the Jenkins pipeline, introduced Dagster and dbt, and migrated a bare-metal system fully into containers, giving the team autonomous control of its environments. Carried a full UI relaunch through the same period. Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023

Cut a roadmap a three-person team could not deliver to the top 10% of features; user acceptance rose fivefold. Implemented the CGM hospital-system interface directly, reducing digital anamnesis time from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022

Restructured an 18-person delivery organisation into three lean teams; attrition fell from near-total exodus to a single departure. Shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER · RETAIL PAYMENTS, POS 2021 TO 2022

Moved research results into production across a matrix organisation in a full SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · INTERIM PRODUCT OWNER · SECURE GOVERNMENT DATA 2021

Data structures and identity management for Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PROXY PRODUCT OWNER · HEALTH-INSURANCE PROCUREMENT 2019 TO 2020

Migrated a legacy procurement system to Shopware for three AOK insurers and 20,000 employees; still in production.

ENERCON · PROJECT LEAD · WIND-ENERGY SITE IT 2019

Full site IT modernisation end to end.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · CLINICAL WLAN 2017 TO 2018

WLAN rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION STAFFING MARKETPLACE 2025 TO 2026

Zero to one: two-sided B2B marketplace with anonymity-until-payment model, WhatsApp and Telegram as product surface, LLM agents across the funnel.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016 TO 2021

Shipped a three-layer hardware-software product that installs in under two minutes to overcome enterprise objection. Later Chair of the board.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH, P2P
PAYMENTS 2013 TO 2018

Built from zero to acquisition; acquired and operated by Sparkasse inside the girocard ecosystem.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO ·
NANOTECHNOLOGY, AGRI 2018 TO 2021

Took a fertiliser product from laboratory to investor rounds; owned financial planning and investor reporting.
