Dear Hiring Team,

You are looking for a product manager who can own institutional trading infrastructure end-to-end and who brings genuine technical and market credibility, not a generalist who borrows the vocabulary from a job description. That specificity is what made this role worth a direct application.

My product career spans 13 years in regulated environments: defence AI at Rohde & Schwarz, a national labour-market analytics platform at the Federal Employment Agency, insurance SaaS at EMIL Group, and a fintech P2P payment product that was acquired and operated by Sparkasse inside the girocard ecosystem. In every case I owned the full arc from discovery through architecture decisions through production rollout. At Rohde & Schwarz I introduced GitOps delivery with ArgoCD across a multinational team and cut rollout time from days to 30 minutes. At EMIL Group I restructured an 18-person delivery organisation under time pressure and shipped the Claims Center from concept to production, reducing time-to-market for new insurance products from months to under a week. These are the kinds of delivery problems a trading-platform PM faces, latency-sensitive systems, regulated workflows, stakeholder pressure from compliance and sales simultaneously.

On the crypto and trading side, I am not presenting surface-level familiarity. I actively trade perpetual futures and spot across Hyperliquid, Bitget, and Jupiter; I study execution quality, slippage, price impact, and routing mechanics using Coinglass and Hyblock Capital; I have built a backtesting engine and trading bots for crypto markets and a pipeline (Hyperion) that reconstructs balancing-market marginal prices over merit-order data. I understand order management, execution routing, and market microstructure from the inside out, including the infrastructure layer: stablecoins, custody, exchange connectivity, and cross-chain bridging via Across Protocol. I also co-founded Kvitt Payment Solutions, a mobile P2P fintech that was acquired and operated by Sparkasse, and I co-founded Qcrypt AG, where I owned the product architecture for quantum-secure encryption in an enterprise security context.

Dubai and the DIFC/ADGM regulatory framework are a deliberate target for me, not a relocation compromise. I am prepared to work fully on-site and I am available on four weeks' notice.

I would be glad to walk through the trading infrastructure specifics, the gap between my background and a pure exchange-PM profile, and how I plan to close it quickly.

Best regards, *Philipp Hilbert*
