Dear Hiring Team at Landmark Digital,

I am applying for the Payments Product Manager role. My interest is specific: Kvitt Payment Solutions, which I co-founded in 2013, was a mobile P2P group-payments product built from zero and taken all the way to acquisition by Sparkasse, operating inside the girocard ecosystem. That experience gave me a hands-on understanding of PSP integration, payment flows, dispute handling, and the edge cases that only surface once real money is moving at volume. Landmark Digital's challenge, running a coherent payment experience across seven brands and multiple GCC markets, is a complexity I find genuinely compelling rather than daunting.

At Scheidt & Bachmann Fuel & Convenience Retail, I was Product Owner on an integration team covering POS and forecourt payment systems in a fully SAFe organisation. I coordinated partner integrations, managed dependencies across agile release trains, and moved research results into production across a matrix organisation, the same cross-functional discipline the Landmark payments role requires when coordinating with PSPs, acquirers, and internal brand teams simultaneously. At EMIL Group I restructured an 18-person delivery organisation into three focused teams and shipped the Claims Center from concept to production: that is the kind of end-to-end ownership, from problem definition through UAT and release, that the posting describes as the core of this role.

On the analytical side, I use SQL directly to investigate funnel behaviour, at construct8 I instrumented the conversion funnel myself and made prioritisation decisions on that data rather than waiting for a dashboard to be built for me. Payment Success Rate analysis, decline pattern investigation, and gateway performance comparison are exactly the problem-solving motions I default to. I bring the same instrumentation discipline from my work on the FCAS AI and data platform at Rohde & Schwarz, where I redirected the entire product strategy based on instrumenting two competing workflows and reading the data.

I am aware that my direct GCC payments experience is limited: I know the card and PSP mechanics well, but the regional specifics of Mada, Gulf-local BNPL providers, and GCC 3DS2 flows are a ramp rather than an established strength. I call this out because I think it is more useful than papering over it. The underlying mechanics are the same, and my track record of getting up to speed quickly in new payment and regulatory contexts, from girocard at Kvitt to PCI-adjacent POS systems at Scheidt & Bachmann, gives me confidence I would close that gap in the first weeks through time with the existing team and payment partners.

Landmark Digital's position as the digital engine behind a portfolio of established retail brands at real GCC scale is exactly the kind of environment where payment product ownership has visible, measurable stakes. I would welcome the chance to talk through how my background fits the specific needs of the Centrepont and Max checkout funnels.

Best regards, *Philipp Hilbert*
