Dear Hiring Team,

I am writing to apply for the Senior Product Manager role on C3 at Libra Solutions. With 13 years owning product in regulated industries, insurance, healthcare, public-sector analytics, fintech, and defence AI, and a hands-on record shipping internal operations platforms, I am confident I can own C3's product strategy and deliver measurable outcomes from day one.

The role description maps closely to work I have done in practice. At EMIL Group I shipped the Claims Center from concept to production in an insurance B2B SaaS environment where compliance, broker trust, and underwriting logic all had to be reconciled before a line of code was written. At Bundesagentur für Arbeit I owned a national analytics platform as both Product Manager and Deputy IT Security Officer, balancing a continuous pipeline of refined and validated work for engineering squads against strict data governance requirements. In both roles I defined success metrics upfront, tracked shipped-feature outcomes, and made documented iterate-or-stop decisions rather than treating launch as the finish line.

On AI integration I work at the level the posting asks for: I use Claude daily for discovery synthesis, competitive analysis, and requirements drafting; Claude Code and GitHub Copilot for rapid prototyping and LLM-assisted spec generation; and n8n for agentic workflow design. Critically, I understand where LLMs fail, hallucination in low-data domains, brittleness at edge cases, confidence without calibration, and I design fallback paths and human oversight checkpoints into AI-enabled features before they reach UAT, not after. For an internal platform like C3, where operational staff act on AI-surfaced decisions, that design discipline is not optional.

The domains C3 spans, underwriting, negotiations, servicing, payment processing, and document management, combine regulatory complexity with high workflow specificity. I have shipped in each of these adjacents separately: payment flows at Kvitt (P2P fintech, acquired by Sparkasse), document management systems at both projuncta and CLINET Platforms, and complex case-state logic in the Claims Center at EMIL. I will not pretend to know Libra's specific vertical on day one, but I know how to build domain expertise quickly through structured subject matter expert engagement and workflow observation, which the posting rightly lists as core PM activities.

I am based in Berlin, work fully remote, and am available at four weeks' notice. I would welcome a conversation about how my background maps to the C3 roadmap.

Best regards, *Philipp Hilbert*
