

Philipp Hilbert. *Global workforce enablement PM with a decade of regulated-industry delivery.*

Positioning, ten years shipping product in regulated B2B environments, compliance, cross-functional teams, 3, 6-month cycles, maps directly onto Safeguard Global's model.

Safeguard Global created the employer-of-record category and has spent fifteen years learning what others are still guessing at: that successful global expansion needs local compliance expertise wired into the product, not bolted on afterward. That framing, "human when it matters", is the kind of product constraint I find genuinely useful, because it forces real prioritisation rather than endless feature addition.

My background is ten years of product ownership in regulated B2B environments: defence-AI platforms for FCAS under multinational governance, a national labour-market analytics system for Germany's Federal Employment Agency, a B2B insurance SaaS platform for underwriters and reinsurers, a healthcare patient app piloted in hospitals, and secure identity-management infrastructure for the Robert Koch Institute. Across those engagements the common thread is managing complexity in undefined problem spaces while keeping cross-functional teams, engineering, QA, data science, compliance, C-level stakeholders, aligned on what matters within the current delivery horizon.

The job description calls for delivery within 3, 6 month horizons, iterative experiments before committing to a build, and commercial awareness of how product decisions land on revenue and customer satisfaction. Those are the mechanics I run by default. At Rohde & Schwarz I redirected an entire product stream, from a UI-led design that recorded zero real usage to a developer-code-first approach, based on two instrumented workflows. At CLINET I cut a roadmap to its top 10% of features and watched user acceptance rise more than fivefold. At EMIL I restructured an 18-person delivery organisation that was losing engineers and client trust, and shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from months to under a week.

The stakeholder range in this role, engineering, design, data, business, sales, marketing, customer success, is the environment I work best in. I have spent years translating between technical constraints and business outcomes, and I take the communication obligation seriously: the same message needs to land differently in a sprint review and an executive briefing. I have done both.

I am based in Berlin, authorised to work across the EU without restriction, and available with four weeks' notice.

Best regards, *Philipp Hilbert*
