

Philipp Hilbert. *Security product veteran who ships AI-native platforms.*

Positioning, thirteen years owning regulated B2B products, from quantum-secure encryption to defence AI, meet a company building autonomous, intelligent security for an always-shifting threat surface.

§ WHY SPIDERSILK

spiderSilk's bet, continuous, autonomous security that keeps pace with a changing attack surface, is exactly the kind of meaty infrastructure problem where deep product ownership matters more than shallow domain familiarity. The job description is explicit that this role sits at the intersection of Threat Intelligence, Engineering, and Go-to-Market, which is a setup I have navigated repeatedly: at Rohde & Schwarz I owned the AI data platform inside the FCAS defence programme, working across multinational teams of architects and data scientists, and at Bundesdruckerei I held deputy IT security officer responsibility for a government-grade secure data platform. The requirement to "stay ahead of evolving threats" is not decorative here, it is the product thesis itself. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

My security background is hands-on infrastructure and encryption product work rather than dedicated threat detection or attack surface management research. The transferable mechanic is strong: I have consistently turned technically dense, compliance-heavy domains into clear product requirements and prioritised roadmaps that engineering teams can actually execute, and I learn new threat landscapes quickly by going directly to the researchers.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo iteration and spec generation
 - **GitHub Copilot**, daily coding assist and code review
 - **Cursor / VSCode**, LLM-augmented development environment
 - **Lovable**, rapid front-end prototyping
 - **n8n**, agentic workflow and multi-agent orchestration
 - **GPT**, edge-case and acceptance-criteria generation
 - **Gamma.app**, stakeholder decks and discovery readouts
 - **Framer**, design-heavy wireframing and prototype review
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, ArgoCD, Helm, Docker, GitOps, CI/CD with Jenkins and GitLab, Dagster, dbt, PostgreSQL, MongoDB, Kafka, REST APIs, Python, Kotlin (Spring Boot), Django, Azure DevOps, Git. AI layer: LLM agent pipelines, prompt engineering, human-in-the-loop evaluation, EU AI Act governance.

§ SIDE PROJECT

LIBERATION OF [BAJOR GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A self-built multi-agent coding framework, operated as a solo production system.

- Implements a file-queue-based agent loop that routes tasks to specialised sub-agents and reassembles results.
- Architecture: lightweight orchestration layer over Claude and GPT APIs, no external orchestration dependency.
- Feeds directly into my backtesting engine (phoenix882.com) and Hyperion, the aFRR balancing-market data pipeline.
- Demonstrates end-to-end ownership of an AI-native product from design through live operation, the same autonomy spiderSilk's products aim to deliver to customers.

§ HOW I WOULD WORK AT SPIDERSILK

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow Threat Intelligence and Security Research standups, read the existing product specs and customer feedback, and draw a first-draft map of where the roadmap's stated priorities and the actual customer pain points diverge.

WEEK 2

Slice, validate, sharpen.

Pick the single highest-uncertainty item on the roadmap and run a fast discovery sprint, customer call, internal review with threat researchers, rough size from Engineering, so the team has a grounded decision rather than an assumption to plan against.

WEEK 3+

Ship, measure, close loops.

Own the first full release cycle end to end: requirements, prioritisation trade-offs, launch coordination with Sales and Customer Success, and a defined KPI to know whether it landed.

I COVER LETTER

spiderSilk's premise, that security must be continuous, intelligent, and autonomous, is one I find technically credible and strategically important. Organisations that depend on point-in-time snapshots of their attack surface are always one deployment behind the threat. A platform that closes that gap autonomously is not a nice-to-have; it is the direction the whole category is moving. That makes the product problem at spiderSilk genuinely interesting to me.

My background directly relevant to this role spans two threads. The first is security infrastructure: as co-founder and product owner at Qcrypt AG I designed and shipped a quantum-secure encryption product, hardware plus software, that enterprise buyers could install in under two minutes rather than the days competitors required. I held the deputy IT security officer role at Bundesagentur für Arbeit, where I owned identity management and data governance for national-scale government systems. I know what it means to build products where a missed security decision has real downstream consequences.

The second thread is AI-native platform ownership. At Rohde & Schwarz I managed the internal AI and data platform for the FCAS European defence programme: I introduced GitOps delivery with ArgoCD that cut rollout time from days to 30 minutes, and I redirected the product away from a well-designed UI nobody used toward a developer-code-first approach that people actually adopted. Building AI products means being willing to let instrumentation override aesthetic preference, which is a discipline I have practiced under real programme pressure.

Translating complexity into something a cross-functional team can execute is where I add the most consistent value. At CLINET Platforms I implemented the CompuGroup Medical hospital interface myself and cut digital anamnesis time from 30 minutes to 5. At EMIL Group I restructured an 18-person delivery organisation losing its senior engineers into three focused teams: attrition dropped to a single departure and we shipped the Claims Center from concept to production. At Scheidt & Bachmann I ran product ownership inside a full SAFe setup with agile release trains across a matrix organisation. The patterns are different but the underlying capability, understanding the system well enough to make the right cuts, transfers directly to owning a security product roadmap under competitive pressure.

spiderSilk sits at the intersection of threat intelligence, engineering, and go-to-market, and the job description is honest that this is a complex stakeholder environment. I have operated in exactly that configuration, defence, government, healthcare, insurance, and the consistent output has been teams that are clearer, faster, and less dependent on heroics. I would welcome the conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager and product owner with 13 years of end-to-end ownership in regulated, technically complex environments: defence AI platforms, government-grade secure data infrastructure, healthcare, insurance, and fintech. I run continuous discovery, convert strategy and user needs into a prioritised roadmap, and lead cross-functional teams through agile delivery. I have held the deputy IT security officer role and co-founded a quantum-secure encryption company, giving me direct fluency in security product decisions that most PMs acquire only at second hand.

§ WHAT I CAN DO

AI Products and Tooling: LLM agent pipelines, agentic workflow design, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI; full prototyping with Claude Code, GitHub Copilot, Cursor, Lovable

Security and Governance: quantum-resistant encryption product design, deputy IT security officer, identity management, GDPR/DSGVO, attack vector framing, EU AI Act compliance

Product Ownership: requirements engineering, user stories, acceptance criteria, backlog refinement, sprint planning, velocity and burndown, UAT, release planning, Jira, Confluence, Figma, Miro

Product Management: continuous discovery, product vision and roadmap, prioritisation, MVP and PoC definition, A/B testing, user research, prototyping, go-to-market support

Agile and Scaled Delivery: Scrum, Kanban, SAFe, agile release trains, PI planning

Technical Environments: Kubernetes, OpenShift, ArgoCD, Docker, GitOps, CI/CD, Jenkins, GitLab, Dagster, dbt, PostgreSQL, MongoDB, Kafka, REST APIs, Python, Kotlin, Django, Azure DevOps

Stakeholder and Leadership: cross-functional team leadership, C-level reporting, workshop facilitation, conflict resolution, change management

Analytics and Data: KPI definition, funnel and churn analysis, ETL, Dagster, dbt, MicroStrategy, Matomo

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM 2024 TO 2025

Internal AI and data platform for the FCAS European programme. Introduced GitOps with ArgoCD: rollout time from days to 30 minutes, platform became hotfix-capable. Instrumented competing workflows and redirected the product to a developer-code-first design that users actually adopted.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023 TO 2024

National labour-market analytics platform. Integrated test automation into Jenkins, introduced Dagster and dbt for quarterly indicator imports, migrated bare-metal to containers, carried a full UI relaunch. Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023

Patient app for iOS and Android. Cut roadmap to top 10% of features: user acceptance rose fivefold. Implemented CGM hospital interface personally: digital anamnesis time from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022

Restructured 18-person delivery organisation into three focused teams: attrition fell to one departure. Shipped the Claims Center from concept to production, cutting time-to-market from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL AND PAYMENTS 2021 TO 2022

POS and forecourt systems. Moved research results to production across a matrix organisation in a full SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · INTERIM PRODUCT OWNER · SECURE GOVERNMENT DATA 2021

Data structures and identity management for Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PROXY PRODUCT OWNER · HEALTH INSURANCE B2B 2019 TO 2020

Migrated legacy procurement system to Shopware for three AOK insurers and roughly 20,000 employees; still in production.

ENERCON · PROJECT LEAD · WIND ENERGY IT 2019

Full site IT modernisation end to end.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · CLINICAL NETWORK 2017 TO 2018

WLAN rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION STAFFING MARKETPLACE 2025 TO 2026

Zero to one: anonymity-until-payment B2B marketplace, WhatsApp and Telegram as product surface, LLM agents across the full funnel.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016 TO 2021

Three-layer hardware-software product installing in under two minutes for enterprise buyers.
Later Chair of the board.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO ·
NANOTECHNOLOGY 2018 TO 2021

Fertiliser product from laboratory to investor rounds; owned financial planning and investor
reporting.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P
PAYMENTS 2013 TO 2018

Built from zero to acquisition by Sparkasse, inside the girocard ecosystem.
