

Philipp Hilbert. *AI Product Manager, construction intelligence.*

Positioning, Ten years building AI-native and B2B SaaS products; now targeting the agentic layer where construction data becomes decisions.

§ WHY SUPERHIVE

Construction is the world's largest industry and one of the last to be structurally changed by software, the gap between the data projects generate and the decisions that data should drive is enormous and real. SuperHive is closing that gap with agents that reason over live project data, and doing it from the Gulf's largest programmes outward, which is the right sequence: the complexity and the stakeholder density there are as hard as it gets, so what survives those environments travels anywhere. The detail that landed for me was the Claude Code work-alongside-agents operating model, that is exactly the environment where my strengths compound.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo prototyping and spec generation
- **GitHub Copilot**, assisted implementation across codebases
- **Cursor / VSCode**, LLM-augmented development
- **Lovable**, rapid no-code front-end validation
- **n8n**, agentic workflow and multi-agent orchestration
- **GPT**, prompt design and model evaluation
- **Gamma.app**, structured document and presentation output
- **Framer**, design-heavy interface prototyping

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, Docker, ArgoCD, GitOps, Helm, Jenkins, CI/CD, Git, GitLab, Azure DevOps, Python, Kotlin (Spring Boot), Django, REST APIs, PostgreSQL, MongoDB, Kafka, Dagster, dbt, ETL pipelines, Jira, Confluence, Figma, Miro, LLM agents, prompt engineering, evaluation loops, EU AI Act compliance.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A two-sided B2B marketplace matching construction firms with workers, built solo to eliminate the headhunter from the hire.

- Anonymity-until-payment model that protects both sides until commitment is confirmed.
 - WhatsApp and Telegram as the product surface; LLM agents across the entire funnel so one operator runs day-to-day.
 - Funnel and conversion analysis in SQL; built zero to one as sole founder and product manager.
 - Direct construction domain exposure: hiring workflows, firm-side pain points, and worker-side friction, the exact user segments SuperHive serves.
-

§ HOW I WOULD WORK AT SUPERHIVE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the customer engagement team on at least one active design-partner session, read every retrospective and conversion analysis available, and map the squad's current backlog against the construction lifecycle stages the platform covers, finding where the prioritisation logic breaks down before touching anything.

WEEK 2

Prototype, evaluate, validate.

Scope one specific agent use case surfaced in week 1, build a working prototype with current frontier models, design a lightweight eval set against the actual workflow it replaces, and run it past one design-partner contact for a first reaction.

WEEK 3+

Ship, graduate, generalise.

Drive the tool graduation decision on the prototype: define the criteria that turn a client-specific capability into a platform feature, write the spec an engineer could build from, and hand it to the squad with a clear success measure already agreed.

I COVER LETTER

Dear SuperHive and AI71 team,

I am applying for the Product Manager role on SuperHive's product squad. My background is ten years of product ownership across regulated industries, defence AI, public-sector analytics, insurance, payments, healthcare, with the last two years focused explicitly on AI-native products, agentic workflows, and LLM evaluation. SuperHive operates at the intersection of those things, applied to the world's largest industry, and that combination is where I want to spend the next chapter.

The posting describes a PM who prototypes with frontier models before handing work to engineering, designs and reads evals, and drives the graduation decision when a client-specific feature is ready to become a platform capability. That is precisely how I work. At Rohde & Schwarz I owned the internal AI and data platform for the FCAS European defence programme, a cross-functional team of fifteen engineers and data scientists, a GitOps delivery model, and the discipline to instrument competing workflows before committing to a direction. The result was a 200% increase in pipeline runs by redirecting strategy away from a polished UI that recorded exactly zero clicks. The lesson transfers directly to construction-intelligence agents: the workflow that feels right in a demo and the workflow users actually run are often different things, and the only way to find out is to measure both.

At EMIL Group I rebuilt a fragile eighteen-person delivery organisation into three focused teams with their own leads, stopped the senior-engineer exodus, and shipped the Claims Center from concept to production with no prior template. At CLINET Platforms I cut an undeliverable roadmap to its highest-value ten percent, and user acceptance rose more than fivefold. On construct8, my own construction staffing marketplace, built as sole founder, I ran the full product lifecycle for a two-sided B2B platform in the exact domain SuperHive serves: firms,

workers, complex trust dynamics, and agents across the funnel so one operator could run the day-to-day. That project gave me direct exposure to the hiring and scheduling workflows, the document friction, and the communication patterns of construction firms, context I would bring into a SuperHive squad from day one.

The detail in the posting that speaks most directly to how I work is the note that Claude Code is part of how the team runs day to day, and that the PM pod is expected to work alongside agents as a normal part of the job. I build that way already: I use Claude Code, GitHub Copilot, Cursor, Lovable, and n8n for agentic orchestration in my own prototyping and spec work. I am not learning to use these tools for this role; I am already using them to do the same kind of scoping, validation, and evaluation work the posting describes.

I am an EU citizen, fluent in English and German, and actively targeting the UAE, I am prepared to relocate to Abu Dhabi for an on-site or hybrid setup. I would welcome the chance to speak with the team about where the squad's current roadmap sits and what the next quarter's biggest open questions are.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with thirteen years of product ownership in regulated, complex-stakeholder environments, defence AI, public-sector analytics, insurance, payments, and healthcare. For the last two years the work has been explicitly AI-native: LLM agents, agentic workflow design, prompt and eval engineering, and end-to-end prototyping before engineering handoff. Equally comfortable in a customer requirements workshop, a model evaluation, and a sprint retrospective; the through-line is translating ambiguous domain needs into crisp, shippable specs.

§ WHAT I CAN DO

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI (XAI); full prototyping with Claude Code, GitHub Copilot, Cursor, Lovable.

Product Management: continuous discovery, product vision and roadmap, prioritisation, MVP and PoC definition, A/B testing, user research and interviews, prototyping, product lifecycle management, go-to-market support.

Product Ownership: requirements engineering, user stories, acceptance criteria, epics, backlog refinement, sprint planning, velocity, release planning, UAT, Jira, Confluence, Figma, Miro.

Agile and Scaled Delivery: Scrum, Kanban, SAFe, ART, PI planning, WIP limits, GitOps rollout and rollback.

Data and Analytics: ETL, Dagster, dbt, PostgreSQL, funnel and churn analysis, KPI definition, Matomo, MicroStrategy.

Technical Environments: Kubernetes, OpenShift, Docker, ArgoCD, CI/CD, Jenkins, Git, GitLab, Azure DevOps, REST APIs, Python, Kotlin, Django, SQL, MongoDB, Kafka.

Stakeholder and Leadership: C-level and executive reporting, cross-functional team leadership, workshop facilitation, conflict resolution, change management, budget ownership.

Governance: GDPR, Deputy IT Security Officer, identity management, ROI reasoning.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION B2B PLATFORM 2025-PRESENT

Two-sided construction staffing marketplace; anonymity-until-payment model; LLM agents across the funnel; funnel and conversion analysis in SQL. Built zero to one, solo.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI AND DATA PLATFORM 2024-2025

AI and data platform for the FCAS European programme; team of 15+; GitOps with ArgoCD cut rollout from days to 30 minutes; pipeline runs up 200% after workflow instrumentation redirected strategy.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC-SECTOR ANALYTICS 2023-2024

National labour-market analytics platform; Deputy IT Security Officer; introduced Dagster and dbt, saving 75% of time per data update; full bare-metal to container migration plus UI relaunch.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023

Roadmap triage to top 10% of features; user acceptance up fivefold; CGM/KIS interface cut digital anamnesis from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022

Restructured 18-person delivery organisation into three teams; attrition from near-total exodus to one departure; Claims Center shipped concept to production; new insurance product time-to-market from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL AND PAYMENTS POS 2021-2022

Research to production across a matrix organisation in a full SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · GOVERNMENT SECURE DATA 2021

Data structures and identity management for the Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE B2B 2019-2020

Shopware migration for three AOK insurers and ~20,000 employees; still in production.

ENERCON · PROJECT LEAD · WIND ENERGY IT 2019

Full site IT modernisation end to end.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · IT SECURITY 2016-2021

Quantum-secure encryption hardware and software; three-layer product installs in under two minutes; later Chair of the board.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO · AGTECH 2018-2021

Nanotechnology fertiliser from laboratory to investor rounds; owned financial planning and investor reporting.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P PAYMENTS 2013-2018

Mobile group-based P2P payments; built from zero; acquired and operated by Sparkasse inside the girocard ecosystem.

§ LANGUAGES

German, native (C2). English, C2, business and technical fluency.
