Dear Riverty Hiring Team,

The Product Manager Installments & Payments role caught my attention because the core challenge – designing payment agreements that are simultaneously fair to consumers, operationally scalable, and economically sound – is exactly the kind of systemic problem I find most compelling. It is not a UX polish exercise; it requires holding regulatory constraints, decisioning logic, and user psychology in tension at the same time.

My background gives me a credible starting position for this. At the Federal Employment Agency I owned an analytics platform serving regional labour market data to policy-makers, where every product decision had to survive scrutiny from data governance, IT security, and politically sensitive stakeholders simultaneously. I introduced Dagster-based ETL automation, reduced manual indicator-generation steps, and served as Deputy IT Security Officer – meaning I lived the intersection of data quality, compliance, and product velocity for over a year. At Rohde & Schwarz I delivered AI and data transformation tooling under a defence programme, where auditability and explainability were not optional features but first-class requirements. Both environments trained me to treat regulation as a design constraint rather than a blocker.

The installment and self-service angle of this role maps closely to work I did at Kvitt Payment Solutions, a P2P group payment product I co-founded and later saw acquired by Sparkasse. Building consumer payment flows from scratch – including PSP integration, settlement logic, and the edge cases that only appear when real users are stressed about money – gave me a practical understanding of where self-service breaks down and what it actually takes to make it robust. I understand why the last ten percent of a payment journey is harder than the first ninety.

At Emil Group I re-established delivery discipline in a struggling InsurTech environment: split a bloated seventeen-person team, reintroduced velocity tracking, and rebuilt client trust through structured product workshops. The parallel to orchestrating Tech, Data, Operations, Legal, and

customer-facing teams at Riverty is direct. I have learned that the organisational side of product management – aligning stakeholders on priorities, making decisions transparent, and creating structures that let teams work with autonomy – is often harder than the product design itself, and I take it as seriously.

I would welcome the chance to talk through how my background fits what your team is building. I am based in Berlin, German is my first language, and I can start within four weeks of an offer.

Best regards, *Philipp Hilbert*
