

Philipp Hilbert. *Vertical SaaS product leader who turns customer workflows into shipped solutions.*

Positioning, ten years delivering B2B SaaS products end-to-end—discovery through launch—across regulated, field-facing, and analytics-heavy domains.

§ WHY ARCSITE

ArcSite sits at an interesting intersection: field-first software where the workflow complexity is real and the customers are practitioners, not software people. The job description calls out pre-construction processes—takeoff, estimating, quote generation—as core to the platform, which is exactly the kind of domain-specific, high-stakes workflow where shallow product work shows up immediately in low adoption and churned accounts. The challenge of translating a messy, multi-stakeholder field process into an intuitive mobile experience is one I have worked through repeatedly, including on a mobile healthcare app for hospital workflows that had similarly complex external system dependencies and users with zero tolerance for friction. *That kind of domain depth, earned through deliberate discovery rather than assumed, is where this role compounds.*

§ HONEST FRAMING

Construction and pre-construction workflows are not a domain I have worked in professionally; my field-workflow experience comes from healthcare, InsurTech, and public-sector analytics rather than the trades or AEC industry. What does transfer directly is the core mechanic: structured customer discovery with domain experts, workflow decomposition into dev-ready requirements, and the discipline to separate what users say they want from what the data shows they actually need.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec and feature work
 - **GitHub Copilot**, IDE-level code assistance
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframing and mockups
 - **Gamma.app**, stakeholder presentations and roadmap narratives
 - **GPT**, research synthesis and edge-case generation
 - **n8n**, agentic workflow automation
 - **Cursor / VSCode**, LLM-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, Kotlin (Spring Boot), Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, dbt, Dagster, DuckDB, MicroStrategy, REST APIs, AngularJS, Ionic, Redpanda, GitOps pipelines, Shopware, Docker, Git.

§ HOW I WOULD WORK AT ARCSITE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow Sales and Customer Success calls, read every available customer interview transcript, and map the end-to-end workflow for the assigned vertical—from the moment a field rep receives a site visit request through quote delivery—marking where the current product helps, where it creates friction, and where customers have built workarounds.

WEEK 2

Validate, then prioritise.

Run structured discovery calls with five to eight customers, test the workflow map against their reality, and produce a ranked opportunity backlog with explicit assumptions attached to each item so Engineering and Design can challenge the framing before any commitment is made.

Ship, close loops.

Pick the highest-confidence, highest-leverage item from the backlog, write tight requirements with acceptance criteria, and drive it through the development cycle to launch—then instrument it and close the feedback loop with the customers who surfaced the original pain.

I COVER LETTER

Dear ArcSite team,

The challenge you are hiring for is one I find genuinely interesting: becoming the domain authority for a specific customer vertical, then translating that authority into a product roadmap that field-facing teams can actually use. That sequence—deep discovery first, strategy second, execution third—is how I have approached product work across nearly ten years, and it is the reason I am applying.

My most directly relevant parallel is the mobile healthcare app I delivered at CLINET Platforms. Hospital workflows have the same structural qualities as construction field workflows: highly domain-specific, resistant to abstraction, driven by practitioners who will abandon a tool the moment it adds steps rather than removing them, and complicated by external system dependencies the PM cannot control. On that project I built stakeholder trust by mapping the actual clinical workflow before writing a single requirement, and by being transparent with hospital IT teams about the constraints imposed by legacy APIs and external databases. The result was a shipped product, on deadline, that covered digital anamnesis, document storage, meal and therapy plans, and a CGM interface into the hospital information system.

At Emil Group I inherited a 17-person team in a prototype-stage InsurTech environment where client trust had eroded and sprint discipline had collapsed. I re-established structured refinement, split the team into effective Scrum units, reintroduced velocity tracking, and ran weekly product workshops with clients to make the roadmap legible again. Senior developer attrition dropped to a single departure. The experience reinforced something I have seen repeatedly: customers and engineers both perform better when the PM runs tight discovery and communicates decisions with explicit rationale rather than presenting conclusions as given.

On the technical side, I have shipped across analytics platforms, AI data management systems, mobile apps, and B2B SaaS configurators. I am comfortable working in the data layer—I introduced Dagster for automated ETL pipelines at the Federal Employment Agency and spent a year at Rohde & Schwarz owning a multimodal data transformation platform for the FCAS defence programme. That technical grounding means I can engage meaningfully with Engineering on feasibility constraints rather than treating them as a black box, which shortens the distance between discovery and delivery.

I do not have professional experience in construction or pre-construction workflows, and I want to name that directly rather than paper over it. What I bring instead is a track record of becoming the domain expert in unfamiliar verticals quickly—through structured interviews, workflow mapping, and close partnership with Sales and Customer Success—and of converting that understanding into product decisions that hold up under technical and business scrutiny. The ArcSite customer base sounds like exactly the kind of expert practitioner audience I work best with: opinionated, time-pressured, and with very clear signals about what is and is not working.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience delivering B2B SaaS products across mobile, analytics, and regulated-domain verticals. Background spans full-cycle product ownership—discovery through launch—in environments where requirements are incomplete, customers are domain experts, and cross-functional alignment is the core constraint. Comfortable translating complex operational workflows into dev-ready requirements, running structured customer discovery, and owning delivery without losing sight of the underlying business problem. Fluent in AI-native tooling and technical enough to engage Engineering as a peer rather than a relay.

§ CORE STRENGTHS

- End-to-end product ownership: discovery, requirements, launch, iteration
- Structured customer discovery and workflow decomposition
- Cross-functional alignment across Engineering, Design, Sales, and Customer Success
- Backlog management, sprint discipline, and velocity recovery
- Technical fluency across modern SaaS and mobile stacks
- Translating domain-expert feedback into prioritised, dev-ready requirements
- Stakeholder communication in prototype-stage and high-pressure environments
- Data platform and analytics product ownership
- AI-native product execution and rapid prototyping

§ PROFESSIONAL EXPERIENCE

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows—digital anamnesis, document storage, meal and therapy plans, transport, and chat—on iOS and Android under tight deadlines
- Integrated CGM interface into hospital information system workflows, managing constraints imposed by legacy APIs and external databases
- Built stakeholder trust through transparent communication of technical complexity across hospital IT and clinical staff
- Led a small cross-functional team with strict focus on highest-leverage features for a pilot go-live

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B InsurTech platform
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline and delivery stability by splitting a bloated 17-person team into focused Scrum units and reintroducing ownership, velocity tracking, and structured refinement
- Regained client trust in a prototype-stage environment through weekly product workshops and structured roadmap communication
- Reduced senior developer attrition from near-total to a single departure

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features for the Arbeitsmarktmonitor analytics platform, including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, improving pipeline reliability and reproducibility
- Designed interactive dashboards, tables, and community features for regional labour market stakeholders
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets (image, audio, tabular) within the FCAS European defence programme
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders

Tech: Kotlin, Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Product Owner – Qcrypt AG (2016–2018):** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware. Owned backup, restore, checkpoint, and data-encryption product architecture. Also served as deputy IT security officer.
 - **Founder – Kvitt Payment Solutions (2013–2018):** Group-based P2P payments on a P2P backbone. Owned PSP integration, full UX/UI design, and mobile app prototype. Later acquired and operated by Sparkasse.
 - **Proxy Product Owner – AOK Health Insurance / ITSCare (2019–2020):** Migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies.
 - **Product Owner – COVID-19 Data Platform, Bundesdruckerei (2021):** RKI projects DIM and DESH. Secure data structures and identity management.
