

Philipp Hilbert. *Product operator who ships AI platforms end-to-end.*

Positioning, ten years shipping technical software in AI, data, and SaaS – from backlog to rollout, across regulated and ambiguous environments.

§ WHY VERITONE

Veritone sits at the intersection of AI infrastructure and enterprise software – a genuinely rare combination where both the data pipelines and the user workflows matter. The job description calls out AI/ML domain expertise alongside deep Agile ownership and GTM execution, which is exactly the trifecta most PM candidates can only partially cover. The explicit focus on cross-functional daily execution rather than strategy theatre is the kind of environment where I have consistently delivered. *That is exactly where moving fast on the right things actually compounds.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, daily coding assistance and review
- **GPT**, structured requirement drafting and edge-case analysis
- **Lovable**, rapid low-fidelity front-end prototyping
- **Framer**, design-heavy workflow diagramming
- **Gamma.app**, internal stakeholder decks and release notes
- **n8n**, multi-agent workflow automation
- **Cursor / VSCode**, LLM-assisted development environment

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, AngularJS, Ionic, CGM API integration, GitOps pipelines, Bitbucket, Git.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Building a backtesting and algorithmic decision framework for crypto market microstructure analysis.

- Ingests historical order-book and trade data from centralised and decentralised venues including Hyperliquid and Bitget.
 - Architecture uses Python with a file-queue-based agent loop for reproducible run management.
 - Applies liquidation heatmap signals from Coinglass and Hyblock Capital as input features.
 - Directly relevant to Veritone's AI/ML data pipeline domain: the same provenance, reproducibility, and auditability concerns apply.
-

§ HOW I WOULD WORK AT VERITONE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow engineering and QA ceremonies, read existing PRDs and acceptance criteria, and map where the handoffs between backlog, design, and implementation are losing fidelity.

WEEK 2

Tighten the backlog.

Run a structured grooming session to surface ambiguous stories, assign clear acceptance criteria, and align stakeholders on the priority stack for the current sprint cycle.

WEEK 3 +

Ship and communicate.

Close the first feature loop: acceptance testing, release note draft, and a stakeholder update that ties delivery back to the business commitment.

I COVER LETTER

Dear Veritone team,

I am applying for the Product Manager role because the combination of AI/ML platform delivery, genuine Agile ownership, and cross-functional GTM execution matches the work I have been doing for the past several years. At Rohde & Schwarz I owned a central AI data management platform for the FCAS defence programme – responsible for multimodal dataset curation, data provenance, SafeAI audit trails, and GitOps-based rollout. I wrote the user stories, collaborated daily with backend engineers, data scientists, and QA, and in one case unblocked an infrastructure issue independently that had been open for over a year – delivering the requested feature in a week. That is the level of ownership this role calls for, and it is where I operate comfortably.

At the Federal Employment Agency I took the same hands-on approach on a public data analytics platform: I introduced Dagster for automated ETL, migrated legacy systems to Kubernetes, served as Deputy IT Security Officer, and delivered labour-market analytics features against real stakeholder commitments. The technical domain was big data and distributed systems – directly aligned with the cloud and data platform expertise Veritone names in the job description.

At Emil Group I inherited a 17-person Scrum team in delivery crisis, split it into focused units, reintroduced velocity tracking and sprint discipline, and ran weekly product workshops with clients to rebuild trust in a prototype-stage environment. I know what it looks like when Agile ceremonies are theatre rather than tools, and I know how to fix it without a reorg mandate.

On the GTM side, I have contributed to release notes, internal stakeholder updates, and sales enablement materials across multiple roles – including co-founding Qcrypt AG where I presented the quantum-encryption product to external audiences in English and managed investor-facing collateral. I am comfortable drafting executive updates and helping sales teams articulate technical product value.

I bring technical fluency across cloud infrastructure, AI/ML data pipelines, and SaaS delivery – not as background knowledge, but as lived shipping experience. I would be glad to discuss how that maps concretely to Veritone's current roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience shipping technical software across AI data platforms, public analytics infrastructure, and B2B SaaS. Consistent track record of owning backlogs end-to-end – from ambiguous requirements to production rollout – in Agile environments where delivery pressure is real. Fluent in cloud infrastructure, AI/ML data pipelines, and cross-functional stakeholder alignment, with hands-on experience in the SDLC from user story to GitOps deployment.

§ CORE STRENGTHS

- Backlog ownership and sprint discipline in Agile/Scrum environments
 - AI/ML data platform delivery with audit, provenance, and ETL depth
 - Cross-functional stakeholder alignment without direct authority
 - Clear technical specification and user story writing
 - Cloud and DevOps fluency: Kubernetes, ArgoCD, GitOps pipelines
 - Data-driven feature prioritisation and tradeoff analysis
 - GTM collateral, release notes, and sales enablement support
 - Developer empathy and rapid prototyping with AI-native tooling
 - Delivery in regulated, ambiguous, and high-pressure environments
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned end-to-end delivery of an AI data management platform for multimodal datasets (image, audio, tabular) within the FCAS European defence programme
- Delivered autonomous feature sets including user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Implemented data provenance, audit trails, and SafeAI/ExplainableAI concepts for ML training and evaluation pipelines

- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered a long-stalled feature in one week
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage indicators, flexible regional comparison, and modernised admin tooling on the Arbeitsmarktmonitor platform
- Introduced Dagster for automated ETL and indicator generation across a big-data pipeline
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration
- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned delivery across a B2B SaaS platform serving primary insurers, reinsurers, MGAs, and brokers – reducing insurance product time-to-market from over one year to under one week
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement
- Rebuilt client trust in a prototype-stage environment through structured weekly product workshops
- Managed stakeholder expectations on bug prioritisation, feature requests, and delivery timelines

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows for digital anamnesis, meal and therapy plans, transport, and chat across iOS and Android
- Integrated CGM interface into hospital information system (KIS) workflows under strict delivery timelines
- Managed cross-functional team and stakeholder communication around legacy API constraints

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product (one-time-pad keys, true random number generator hardware)
- Designed backup, restore, checkpoint, and data-encryption flows; USP was setup under two minutes without technical knowledge
- Presented the product to external audiences and investors in English; served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies
