Dear Veritone team,

I am applying for the Product Manager role because the combination of AI/ML platform delivery, genuine Agile ownership, and cross-functional GTM execution matches the work I have been doing for the past several years. At Rohde & Schwarz I owned a central AI data management platform for the FCAS defence programme – responsible for multimodal dataset curation, data provenance, SafeAI audit trails, and GitOps-based rollout. I wrote the user stories, collaborated daily with backend engineers, data scientists, and QA, and in one case unblocked an infrastructure issue independently that had been open for over a year – delivering the requested feature in a week. That is the level of ownership this role calls for, and it is where I operate comfortably.

At the Federal Employment Agency I took the same hands-on approach on a public data analytics platform: I introduced Dagster for automated ETL, migrated legacy systems to Kubernetes, served as Deputy IT Security Officer, and delivered labour-market analytics features against real stakeholder commitments. The technical domain was big data and distributed systems – directly aligned with the cloud and data platform expertise Veritone names in the job description.

At Emil Group I inherited a 17-person Scrum team in delivery crisis, split it into focused units, reintroduced velocity tracking and sprint discipline, and ran weekly product workshops with clients to rebuild trust in a prototype-stage environment. I know what it looks like when Agile ceremonies are theatre rather than tools, and I know how to fix it without a reorg mandate.

On the GTM side, I have contributed to release notes, internal stakeholder updates, and sales enablement materials across multiple roles – including co-founding Qcrypt AG where I presented the quantum-encryption product to external audiences in English and managed investor-facing collateral. I am comfortable drafting executive updates and helping sales teams articulate technical product value.

I bring technical fluency across cloud infrastructure, AI/ML data pipelines, and SaaS delivery – not as background knowledge, but as lived shipping experience. I would be glad to discuss how that maps concretely to Veritone's current roadmap.

Best regards, *Philipp Hilbert*
