Dear Julia Bergers and the FERCHAU team,

I am writing to apply for the IT Product Owner role (reference 79-90785-DO-CO). My background is ten years of hands-on product ownership in agile software environments, with a particular focus on regulated industries, complex stakeholder landscapes, and delivery teams that need structure to regain momentum.

At Emil Group, an InsurTech B2B SaaS platform serving primary insurers, reinsurers, and MGAs, I inherited a 17-person team operating without sprint discipline, with client trust eroding and developer attrition climbing. I re-established Scrum ceremonies, split the team into smaller ownership units, reintroduced velocity tracking, and ran weekly product workshops that rebuilt client confidence. That experience maps directly to what the posting describes: backlog ownership, refinement facilitation, acceptance criteria definition, delivery accountability, and stakeholder communication in a regulated environment where quality failures have real consequences.

At the Bundesagentur für Arbeit, I served as Deputy IT Security Officer alongside my product ownership responsibilities, which required sustained engagement with compliance and governance stakeholders of the kind found in banking and financial services. I managed major system migrations, introduced automated ETL pipelines with Dagster, and standardised CI/CD across the platform – work that required translating between data scientists, backend engineers, and senior public-sector decision-makers simultaneously.

At Rohde & Schwarz, within the FCAS European defence programme, I owned a central AI data management platform end-to-end: from user stories and acceptance criteria through implementation support, testing, and GitOps-based rollout with ArgoCD. I reduced deployment cycles from several days to under 40 minutes and unblocked infrastructure-level issues that had been outstanding for over a year. This demonstrates the kind of delivery ownership and

technical credibility the posting asks for – not just facilitating process but closing the loop on quality and stability.

The requirement for Scrum and SAFe literacy alongside Jira, Confluence, and Azure DevOps fluency reflects an organisation that has invested in delivery discipline. That is the kind of environment I work best in: where process exists as a tool for speed rather than as bureaucratic overhead, and where a strong PO can make a measurable difference to team output within weeks.

I am fluent in German (native) and English (C2), available from four weeks' notice, and open to the hybrid arrangement described.

Best regards, *Philipp Hilbert*
