

Philipp Hilbert. *Integration product specialist, scaling what matters.*

Positioning, ten years translating complex operational workflows into scalable digital systems – now applying that to Riverty's client-integration challenge. ≤ 25 words.

§ WHY RIVERTY

Riverty's growth lever is not the product itself but the speed and reliability with which new clients can be connected to it – and that is a product problem disguised as an operations problem. The job description names exactly the gap I find most interesting: the absence of standardised components, reusable templates, and configuration-driven onboarding that would let integration scale without linear headcount growth. Bertelsmann's ownership structure means long-term thinking is institutionally possible rather than just aspirationally stated – a meaningful signal for this kind of infrastructure work. *That is exactly the environment where systematic standards actually get adopted rather than deprecated six months later.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo requirements and spec generation
- **GitHub Copilot**, accelerated implementation support
- **GPT**, discovery synthesis and stakeholder communication drafts
- **Cursor / VSCode**, AI-assisted development and review
- **Lovable**, rapid front-end prototyping
- **Gamma.app**, structured product documentation and workshops
- **n8n**, agentic workflow automation and integration mapping
- **Framer**, design-heavy prototyping and concept validation

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, Django, JavaScript, AngularJS, Ionic, Redpanda, GitOps toolchains, Bitbucket, Git, MicroStrategy, low-code platforms, CGM API integration, Shopware.

§ SIDE PROJECT

KVITT PAYMENT SOLUTIONS [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Group-based P2P payment product built from scratch, later acquired by Sparkasse.

- Designed and prototyped a P2P backbone enabling group-level payment splitting across mobile.
 - Integrated PSP layer end-to-end, including full UX/UI design and mobile app prototype.
 - Navigated regulatory and banking-interface constraints typical of fintech products in Germany.
 - Directly relevant to Riverty's payment and financial-flow product context.
-

§ HOW I WOULD WORK AT RIVERTY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview the integration team, onboarding operations, and two or three client-facing teams to build a current-state map of how new clients are onboarded to the Inkasso platform today – where the bottlenecks are, where standards exist only in someone's head, and where technical debt is hiding in one-off configurations.

WEEK 2

Prioritise, slice, align.

Translate the gap map into a prioritised discovery backlog, validate the highest-impact items with engineering and operations leads, and identify the two or three standardisation bets most likely to unlock scalability – interface contracts, data model templates, or configuration-driven onboarding flows.

Ship, document, embed.

Deliver the first standardised component or template into production use, establish the documentation and governance ritual that ensures it actually gets applied by client-responsible teams, and start measuring time-to-integration before and after.

I COVER LETTER

Dear Riverty Hiring Team,

I am applying for the Product Manager Integration role because the challenge you describe is one I have spent the better part of a decade getting good at: taking complex, operationally messy processes that are currently handled inconsistently across teams and turning them into scalable, standardised systems with genuine product ownership behind them.

My most directly comparable experience is at Emil Group, where I joined a B2B InsurTech platform that had slipped into prototype-stage chaos – inconsistent delivery, eroding client trust, and a team structure that had grown too large to function as a coherent unit. I restructured the team into focused Scrum units, reintroduced velocity tracking and ownership, and re-established the rhythm of reliable weekly delivery. Regaining client trust was not a communication exercise; it came from actually shipping predictable, working software. That is the same discipline Riverty's integration challenge requires: making onboarding reliable enough that clients and internal stakeholders can plan around it.

At Rohde & Schwarz I owned a data management platform under a European defence programme with multinational stakeholders and strict auditability requirements. The work required translating domain-specific requirements – from data scientists, ML engineers, security officers, and programme management – into production-ready features with clear acceptance criteria, testable outputs, and documented provenance. The closest parallel to your standardisation challenge was designing transformation pipelines and data tagging schemes that could be applied consistently across heterogeneous data sources rather than customised ad hoc every time. That is the same structural instinct your role is asking for in client integration: reusable, configurable, verifiable.

At the Federal Employment Agency I served as Deputy IT Security Officer while simultaneously owning the analytics platform product roadmap – an unusual combination that sharpened my sense of how governance and product velocity interact. Regulatory and compliance constraints are not obstacles to good product design; they are constraints that, modelled correctly, produce more durable standards. I expect Riverty's regulated fintech context to surface the same dynamic, and I am comfortable operating in it.

I am a native German speaker with business-level English and more than ten years of experience working in cross-functional, international settings. I have found that the quality of written standards and documentation matters at least as much as the quality of the initial product decision – both because standards only work if people understand them, and because client-facing integration work surfaces ambiguities quickly and without mercy.

I would be glad to discuss how my background maps to your specific integration architecture and roadmap challenges.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience turning complex operational workflows into scalable, standardised software systems. Deep background in platform product ownership, cross-functional team alignment, and delivery in regulated environments – spanning defence AI data platforms, public analytics infrastructure, and B2B SaaS in insurance. Equally comfortable owning the strategic roadmap and unblocking implementation-level problems directly. Builds the documentation, governance, and process structures that make standards stick rather than drift.

§ CORE STRENGTHS

- Translating operational complexity into scalable, standardised product components
- Platform roadmap ownership and milestone-driven discovery
- Cross-functional alignment without direct authority
- Delivery stability and team restructuring under pressure
- Regulated environment product ownership (defence, public sector, insurance, fintech)
- AI-native product execution and workflow automation
- Technical fluency across backend, infrastructure, and data systems
- Structured documentation and standards governance
- Founder-level pragmatism – high agency, low ego

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Designed standardised data transformation pipelines, tagging schemes, and audit trails applicable across heterogeneous multimodal datasets – replacing one-off configurations with reusable components.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA under multinational stakeholder constraints.
- Unblocked an infrastructure-level problem the project lead had requested from engineers for over a year – delivered independently in one week.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform, owning the roadmap for regional labour market and demographic data products.
- Introduced Dagster for automated ETL and indicator generation, establishing repeatable pipeline standards.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage.
- Migrated legacy systems to Kubernetes; standardised CI/CD with full test integration at build time.
- Delivered features including labour shortage analytics, flexible regional comparison, and modernised admin tooling.

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Restructured a bloated 17-person team into smaller, effective Scrum units with clear ownership and deputy concepts – restoring delivery predictability in a prototype-stage environment.
- Designed and delivered a Claims Center module from concept to production rollout.
- Reintroduced velocity tracking and structured refinement practices; regained client trust through weekly product workshops and transparent communication.

- Reduced senior developer attrition from near-total to a single departure.
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows (digital anamnesis, meal and therapy plans, transport, chat, document storage) on iOS and Android under tight deadlines.
 - Integrated CGM interface into hospital information system workflows, managing complex legacy API constraints.
 - Built stakeholder trust through transparent communication of technical complexity and dependency risks.
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- Designed for setup under two minutes with no technical knowledge required – primary USP for non-technical enterprise buyers.
- Served concurrently as deputy IT security officer.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder

- Founded and built a group-based P2P payment product on a P2P backbone, including full PSP integration, UX/UI design, and mobile app prototype.
- Later acquired and operated by Sparkasse.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Head of HR

- Established full digital tooling, ERP, financial planning, and investor relations for a nanotechnology startup in vertical indoor farming.
