

# Philipp Hilbert. *Crypto-native Product Manager for BISON's next growth chapter.*

*Positioning*, ten years of regulated-product delivery, a founder's ownership mindset, and eight years of hands-on crypto experience brought to bear on Europe's most trusted crypto app.

## § WHY BOERSE STUTTGART DIGITAL

Boerse Stuttgart Digital sits at a rare intersection: a regulated, trust-first institution that has chosen to compete seriously in crypto – not as a side experiment, but as the core business. The posting names conversion, retention, and trade volume as the KPIs that matter, which is exactly the analytical frame I use when prioritising. The requirement to balance user needs, regulatory requirements, and business impact simultaneously is where most PMs struggle; it is where I have spent the last several years building. *That is precisely the kind of constraint-rich environment where considered prioritisation compounds into durable product advantage.*

---

## § AI-NATIVE STACK

*Daily tools, not buzzwords.*

- **Claude Code**, in-repo specs and acceptance criteria drafts
- **GPT**, user-story generation and edge-case analysis
- **Cursor/VSCode**, LLM-assisted development and review
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframes and investor decks
- **Gamma.app**, structured stakeholder presentations

- **n8n**, agentic workflow automation and backlog tooling
  - **GitHub Copilot**, sprint-time implementation support
- 

## § TECHNICAL ENVIRONMENT

*Shipped with, not just listed.*

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, Redpanda, REST APIs, MicroStrategy, GitOps pipelines, CI/CD with full test integration.

---

## § SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

*Personal infrastructure for systematic crypto strategy research and automated execution.*

- Builds and runs backtests against historical OHLCV and on-chain data across centralised and decentralised venues.
  - Designed around a modular pipeline architecture; strategy logic, data ingestion, and execution layers are fully decoupled.
  - Integrates liquidation heatmap data from Coinglass and Hyblock Capital as signal inputs alongside standard price feeds.
  - Direct product relevance: the microstructure intuitions built here – slippage, funding rates, order routing – translate directly to feature prioritisation for a trading-focused consumer platform like BISON.
- 

## § HOW I WOULD WORK AT BOERSE STUTTGART DIGITAL

*First weeks, concrete.*

### WEEK 1

**Listen, map, find the gaps.**

Sit with support tickets, user session recordings, and existing KPI dashboards to map where conversion drops, where retention erodes, and where the current backlog addresses those gaps – and where it does not.

## WEEK 2

### Slice and align.

Run a structured backlog review with engineering and design, re-stack priorities against conversion and retention impact, and align with the Lead Product Manager on which OKRs the team's current sprint cycle is actually moving.

## WEEK 3+

### Ship and measure.

Close the first discovery-to-delivery loop on a well-scoped feature, instrument the relevant KPIs before release, and establish a lightweight weekly review ritual that keeps the team anchored to measurable outcomes rather than output.

---

## *I* COVER LETTER

Dear Hiring Team at Boerse Stuttgart Digital,

I am applying for the Senior Product Manager role on the BISON app. BISON is one of the few crypto platforms in Europe that has earned genuine retail trust by staying regulated and transparent, and that is a product foundation worth building on seriously. I have spent eight years as an active crypto user – trading spot and perpetuals on centralised and decentralised venues, managing cross-chain positions, studying market microstructure – and the last ten years delivering software products in regulated, complex environments. This role is a direct intersection of those two tracks.

My most recent role was at Rohde & Schwarz on the FCAS programme, where I owned a cross-functional team delivering an AI data management platform under European defence governance constraints. The regulatory and audit requirements there were strict, the stakeholder landscape was multinational and demanding, and the delivery cadence was unforgiving. I drove end-to-end feature delivery autonomously – from user story through implementation support to GitOps rollout – and cut deployment times from several days to under forty minutes by introducing ArgoCD-based pipelines. The ability to hold both the strategic frame and the technical detail simultaneously is something I built there under real pressure.

Before that, at Emil Group, I inherited a seventeen-person Scrum team that had lost delivery rhythm and client trust. I restructured it into smaller, focused units, reintroduced velocity tracking and structured refinement, and used weekly product workshops to rebuild the client relationship. Within one quarter, the team was shipping predictably again. That experience taught me that cross-functional leadership is not about authority – it is about creating the conditions where engineers, designers, and stakeholders can move without waiting for permission. The BISON posting names exactly that as a core expectation.

My crypto knowledge is not background reading. I actively trade perpetual futures on Hyperliquid, aggregate DEX routing via Jupiter and 1inch, manage cross-chain positions through Across Protocol, and spend significant time with liquidation analytics platforms like Coinglass and Hyblock. I have built a personal backtesting engine to systematise strategy research, and I have developed detailed frameworks for algorithmic execution and risk management. When a user of BISON asks why their limit order did not fill, or why a withdrawal is delayed, or how leverage works – I understand the full stack behind that question, and I can translate it into product decisions that reduce friction without compromising the regulatory guardrails that make BISON trustworthy.

I speak German natively and English at C2 level, and I am comfortable presenting complex topics to both technical teams and executive stakeholders. I would welcome a conversation about how my background maps to what the BISON team is building next.

Best regards, *Philipp Hilbert*

## **II** CURRICULUM VITAE

---

### § BEARING

Product Manager with close to ten years of delivery experience across regulated B2B SaaS, government analytics platforms, AI data systems, and consumer digital products. Background combines cross-functional team leadership, structured backlog ownership, and genuine technical depth. Eight years of active crypto participation – spanning centralised exchanges, decentralised protocols, perpetual markets, and cross-chain infrastructure – translates directly to the domain knowledge a consumer crypto platform requires. Comfortable operating in environments where regulatory, user, and business demands must be balanced simultaneously without slowing delivery.

---

### § CORE STRENGTHS

- End-to-end product ownership from discovery through GitOps rollout
- Cross-functional team leadership across engineering, design, QA, and compliance
- Backlog management, sprint restructuring, and velocity recovery
- KPI-driven prioritisation: conversion, retention, trade volume
- Stakeholder communication across technical and executive audiences
- Regulated-environment product delivery (defence, public sector, InsurTech)

- Hands-on crypto domain knowledge: CEX, DEX, perpetuals, bridges, oracles
  - AI-native product execution and rapid front-end prototyping
  - Founder-level pragmatism: low ego, high agency, ownership without hierarchy
- 

## § PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

### *Product Manager, AI Data Transformation*

- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA under European defence programme governance (FCAS)
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing ArgoCD-based GitOps pipelines
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature engineers had been unable to ship for over a year
- Responsible for data quality, audit trails, full data provenance, and transparency concepts (SafeAI, ExplainableAI) with multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

### *Product Manager, Public Data Analytics*

- Advanced the Arbeitsmarktmonitor analytics platform: labour shortage analytics, flexible regional comparison, modernised admin tooling
- Introduced Dagster for automated ETL pipelines and indicator generation; migrated legacy systems to Kubernetes
- Designed interactive dashboards, tables, and community features for public and institutional users
- Served as Deputy IT Security Officer (IT-SV) with responsibility for compliance, governance, and data lineage

EMIL GROUP 2022, 2022

### *Product Manager, InsurTech SaaS Platform*

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation for primary insurers, reinsurers, MGAs, and brokers
- Designed and delivered a Claims Center module from concept to production

- Restructured a bloated 17-person Scrum team into smaller, accountable units; reintroduced velocity tracking and structured refinement
- Rebuilt client trust in a prototype-stage environment through structured weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

#### CLINET PLATFORMS 2021, 2022

##### *Product Owner, Mobile Healthcare App*

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
  - Integrated CGM interface into hospital information system workflows under strict legacy API constraints
  - Built stakeholder trust through transparent communication of technical complexity across external databases and legacy systems
- 

#### § FOUNDER & EARLY-STAGE EXPERIENCE

##### QCRYPT AG 2016, 2018

##### *Product Owner*

- Owned product architecture for a quantum-secure encryption product (one-time-pad keys, true random number generator hardware), targeting setup under two minutes with no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector analysis and security governance

##### KVITT PAYMENT SOLUTIONS 2013, 2018

##### *Founder & CFO*

- Built a group-based P2P payment product from prototype to acquisition; handled PSP integration, full UX/UI design, and mobile app development
- Later acquired and operated by Sparkasse

##### SMART SOIL TECHNOLOGIES 2016, 2021

##### *Co-Founder, CDO, CFO & Project Lead*

- Established full digital tooling, financial planning, and investor relations for a nanotechnology startup in vertical indoor farming
