

Philipp Hilbert. *Platform PM who ships AI-native products end-to-end.*

Positioning, hands-on platform PM with a decade of B2B SaaS delivery, AI product execution, and the technical depth to move from discovery to prototype to production without a handoff.

§ WHY WTS ADVISORY

WTS Platform is an interesting bet: taking deep tax domain knowledge and turning it into a product-led capability used by service lines and clients simultaneously – that is a different problem than building another SaaS dashboard. The posting is explicit that someone who has built products from scratch is needed, not someone who has inherited a roadmap; that matches the mode I work in best. The expectation to measure quality and value of AI-based solutions, rather than just deploy them, is the harder and more interesting challenge. *That is exactly the kind of rigour I want to bring to a platform that matters.*

§ HONEST FRAMING

Tax advisory is not a domain I have worked in professionally. What I do have is repeated experience entering regulated, expert-heavy domains – defence AI platforms, public labour market analytics, InsurTech – and turning practitioner knowledge into structured, shippable requirements. The transfer mechanism is the same: structured discovery with the domain experts, rapid prototyping to validate assumptions, and measurable acceptance criteria before a line of code is written.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GPT**, discovery synthesis and edge-case generation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy interaction mockups
- **GitHub Copilot**, implementation support alongside engineering
- **n8n**, agentic workflow design and automation
- **Gamma.app**, stakeholder presentation and business case decks
- **II-Agent**, autonomous multi-step task orchestration

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Django, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Docker, Redpanda, MicroStrategy, Bitbucket, Git, Shopware, CGM API integration, AngularJS, Ionic.

§ SIDE PROJECT

TRUE NORTH BERLIN TRUE-NORTH.BERLIN →

Independent product and consulting vehicle with a public web presence.

- Houses tooling experiments, AI-native workflow automation, and client-facing product delivery work.
- Built on a lightweight stack with rapid iteration in mind; used to prototype before recommending patterns to clients.
- Active home for ongoing AI agent and backtest engine development for crypto markets.
- Demonstrates the founder-level operating mode the WTS Platform role explicitly calls for.

§ HOW I WOULD WORK AT WTS ADVISORY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the service lines that feed the platform – tax, transfer pricing, compliance – and map where practitioners are still working around the product rather than through it, producing the first version of a gap-to-impact matrix.

WEEK 2

Prototype, validate fast.

Take the two or three highest-friction gaps, build click-through prototypes in Lovable or Framer, and run structured feasibility and desirability tests with service-line practitioners before any engineering capacity is committed.

WEEK 3+

Prioritise, ship, measure.

Consolidate validated insights into a prioritised roadmap with business cases, align with engineering and design on first sprint scope, and establish NPS and usage baselines so every release has a measurable before and after.

I COVER LETTER

Dear WTS Advisory team,

Platform products inside professional service firms are harder to build than they look. The value of the domain knowledge is real, but it is locked inside individual practitioners, not yet in software. The job is to extract it, make it configurable, and turn it into something clients and internal teams actually adopt. That is the problem I find most interesting, and it is exactly what the WTS Platform role describes.

My relevant recent experience is at Rohde & Schwarz, where I owned the product roadmap for a central AI and data management platform inside the European defence programme FCAS. The platform had to serve data scientists, domain experts, and auditors at the same time, with strict requirements on data provenance, audit trails, and explainability. I ran discovery with each stakeholder group separately, built rapid prototypes to test assumptions, and then drove features end-to-end from user story through acceptance testing to GitOps rollout. I reduced deployment times from several days to under forty minutes. The dynamic at WTS – service lines as both internal user and subject-matter expert, with enterprise clients as the end beneficiary – maps closely to what I navigated there.

At the Federal Employment Agency I owned an analytics platform serving regional policymakers and labour market researchers. I introduced Dagster-based ETL pipelines,

designed interactive dashboards, and served concurrently as Deputy IT Security Officer. The work required translating between economists who thought in indicators and engineers who thought in tables – the same translation layer a tax platform PM must maintain between Steuerexperten and engineering. At Emil Group, where I rebuilt a bloated InsurTech platform team and delivered a Claims Center module from concept to production, I learned what structural sprint discipline and clear ownership models mean for a B2B SaaS product under delivery pressure.

On the AI side, I work daily with Claude Code, GPT, Lovable, Framer, GitHub Copilot, and n8n. I have designed multi-agent orchestration workflows and built autonomous feature delivery pipelines. I know how to scope an AI use case, instrument it for quality measurement, and communicate the result in business terms to leadership – which is precisely what the posting asks for when it says "du machst Qualität und Mehrwert messbar."

I do not have a tax background, and I am not pretending otherwise. What I bring is a decade of structured product discovery in regulated, expert-heavy domains, and the technical depth to go from whiteboard to prototype to shipped feature without losing either the practitioner's intent or the engineering team's confidence. I would be glad to walk through a specific example in a first conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Platform PM with nearly ten years of experience turning complex operational and expert workflows into scalable B2B SaaS products. Has built platforms from scratch in regulated environments – defence AI data management, public analytics, InsurTech – with full ownership from discovery through production rollout. Comfortable leading cross-functional teams across engineering, design, data science, and domain experts. AI-native product operator who uses Claude Code, GPT, Lovable, and agentic tooling daily, and who knows how to instrument AI features for measurable quality and business value. Fluent in German and English at C2 level.

§ CORE STRENGTHS

- Product discovery with non-technical domain experts in regulated environments
- Building B2B SaaS platform products from concept to production

- AI use-case scoping, prototyping, and quality measurement
 - Cross-functional alignment across engineering, design, data science, and compliance
 - Hands-on prototyping with Lovable, Framer, and LLM-assisted tooling
 - Business case development and presentation to senior leadership
 - Sprint discipline, backlog ownership, and delivery velocity management
 - ETL and data platform product ownership
 - Founder-level agency: low overhead, high output, clear priorities
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned product roadmap for a central AI and data management platform (multimodal: image, audio, tabular) within the FCAS defence programme
- Ran discovery with ML engineers, data scientists, and domain experts; designed filtering, tagging, and transformation pipelines with full audit trails and data provenance
- Built and shipped AI quality and transparency concepts (SafeAI, ExplainableAI) to meet multinational stakeholder requirements
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing ArgoCD-based GitOps
- Unblocked a year-long infrastructure issue in OpenShift independently; delivered in one week
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned roadmap for the Arbeitsmarktmonitor: a regional labour market and demographic analytics platform
- Delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin interfaces
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Designed interactive dashboards and community features (groups, networks, events)

- Served as Deputy IT Security Officer with focus on compliance, data lineage, and governance
- Standardised CI/CD pipelines with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product delivery for a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week
- Designed and delivered a Claims Center module from discovery through production rollout
- Rebuilt sprint discipline: split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through weekly product workshops and structured communication
- Delivered modules across pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Built a mobile-first pilot app for hospitals (iOS and Android) covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows under strict delivery constraints
- Maintained stakeholder trust through transparent communication of legacy API complexity

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned architecture for a quantum-secure encryption product (one-time-pad keys, true random number generator hardware); setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security governance

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded and built a group-based P2P payment product on a P2P backbone

- Owned PSP integration, full UX/UI design, and mobile app prototype; product later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO & Head of HR

- Established digital tooling, financial planning, investor relations, and HR infrastructure for a vertical indoor farming nanotechnology startup
