

Philipp Hilbert. *Pricing tools product owner with a builder's instinct.*

Positioning, ten years owning complex operational platforms end-to-end, now bringing AI-native prototyping and stakeholder alignment to SIXT's next-generation rate management tools.

§ WHY SIXT

SIXT's pricing tools problem is exactly the kind of challenge that rewards a PM who can read a system, talk to its users, and build a working prototype before writing a single requirements document. The job description is explicit: you own discovery, prototyping, and stakeholder validation – engineering picks it up only once the concept is proven. That sequence maps precisely to how I have worked at Rohde & Schwarz and the Federal Employment Agency, where I translated messy operational realities into clear, dev-ready solutions. The access to Claude from day one and SIXT's stated commitment to AI fluency across the team signals a genuine organisational bet, not a checkbox. *That is exactly the environment where compounding between product intuition and AI-native execution actually shows up in outcomes.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo prototyping and spec generation
- **Lovable**, rapid clickable prototype delivery
- **Cursor / VSCode**, LLM-assisted development
- **GitHub Copilot**, feature implementation support
- **Framer**, workflow and UX mockups
- **Gamma.app**, stakeholder presentation
- **GPT**, edge-case and acceptance-criteria generation

- **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, dbt, Dagster, DuckDB, Kotlin (Spring Boot), Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, REST APIs, Redpanda, MicroStrategy, Bitbucket, Git.

§ SIDE PROJECT

BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal crypto market backtesting and trading-bot framework, built infrastructure-first.

- Executes historical strategy simulations across spot and perpetual futures venues.
 - Architecture built around a file-queue-based agent loop with modular strategy plugins.
 - Connects to live data from Hyperliquid, Bitget, Jupiter, and 1inch for real-time signal validation.
 - Directly relevant to pricing modelling: the same discipline of encoding business rules into deterministic, testable logic applies to rate management systems.
-

§ HOW I WOULD WORK AT SIXT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the pricing, revenue management, and commercial teams in their daily workflows with the existing rate management system, documenting where the tool forces workarounds, where data is missing, and where decisions are made outside the system entirely.

WEEK 2

Prototype one slice.

Identify the single highest-friction workflow uncovered in week one and build a clickable, working prototype in Lovable or Framer, validated in a short session with two or three daily users before any further design work.

Ship, validate, hand over.

Iterate the prototype based on stakeholder feedback, secure formal business acceptance, and hand a clean, annotated concept with acceptance criteria to engineering – ready to build without a translation layer.

I COVER LETTER

Dear SIXT Hiring Team,

I am applying for the Technical Product Owner role on SIXT's internal pricing tools. The job description is unusually direct about what the role actually requires: understand the existing system deeply, talk to users, build a working prototype, validate it, and hand it over to engineering. That is a sequence I have run in full at multiple companies, and it is the kind of work I find most valuable to do.

At Rohde & Schwarz, I owned a central AI and data management platform inside a defence programme with multinational stakeholders. Requirements were incomplete, the infrastructure was opaque, and engineers were blocked on features that had been outstanding for over a year. I unblocked infrastructure-level issues in OpenShift independently and delivered a complete feature in one week that the project lead had been requesting from engineers for months. What made that possible was not heroics – it was the habit of reading systems directly rather than waiting for documentation.

At the Federal Employment Agency, I advanced a public analytics platform for regional labour market data. I introduced automated ETL pipelines with Dagster, migrated legacy systems to Kubernetes, and served as Deputy IT Security Officer. The work required translating between data scientists, backend engineers, policy stakeholders, and compliance – the same cross-functional alignment that pricing tools at SIXT's scale demand daily.

At Emil Group, I joined a B2B InsurTech SaaS platform where delivery had broken down. I re-established sprint discipline, split a bloated 17-person team into effective Scrum units, and regained client trust through structured weekly workshops. The Claims Center module I designed went from concept to production on schedule. Internal tooling for regulated, high-stakes business processes is where I am most comfortable – and pricing tools at a global mobility operator are exactly that.

I use Claude Code, Lovable, Cursor, and GitHub Copilot in daily product work. The prototyping requirement in this role is not a stretch – it is how I already validate ideas before they reach engineering. I am also open to relocating to Munich, which I understand is where this team is based.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with close to ten years of experience translating complex operational workflows into scalable software systems. Strongest in environments where requirements are incomplete and discovery, prototyping, and stakeholder alignment happen in the same motion. Background spans AI data platforms, public analytics, B2B SaaS in regulated industries, and founder-level company building. AI-native by practice: Claude Code, Lovable, GitHub Copilot, and Cursor are daily instruments, not occasional experiments.

§ CORE STRENGTHS

- Rapid prototyping with AI coding assistants (Lovable, Cursor, Claude Code)
 - Translating operational workflows into dev-ready requirements
 - Cross-functional stakeholder alignment across business, engineering, and data
 - End-to-end delivery ownership from discovery through GitOps rollout
 - Backlog discipline, sprint restructuring, and velocity recovery
 - Product discovery in ambiguous, high-pressure environments
 - Internal tooling and platform product ownership
 - Technical fluency across data systems, APIs, and infrastructure
 - Founder-level pragmatism: low ego, high agency, bias for shipping
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation, testing, GitOps rollout
- Unblocked infrastructure-level OpenShift issues independently; shipped in one week a feature outstanding from engineers for over a year

- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails
- Led cross-functional team across architect, data scientists, backend and frontend engineers, and QA

Tech: Kotlin, Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift, Redpanda

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation across complex data pipelines
- Migrated legacy systems to Kubernetes; standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered Claims Center module from concept to production rollout
- Re-established sprint discipline; split a bloated 17-person team into effective Scrum units with clear ownership
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases
- Led a small team under tight deadlines with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- Owned product delivery on RKI projects DIM and DESH: secure data structures and identity management at national scale
-

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies
-

QCRYPT AG 2016, 2018

Product Owner, Co-Founder

- Owned backup, restore, checkpoint, and data-encryption product architecture for a quantum-secure OTP encryption product
 - Served as deputy IT security officer; delivered setup under two minutes with no technical knowledge required from the end user
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone; designed full UX/UI and mobile app prototype

- Managed PSP integration; product later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Project Lead

- Established full digital tooling, financial and investment planning, and ERP introduction across company growth phases
