

Philipp Hilbert. *Product Manager for AI-driven property operations.*

Positioning, ten years translating complex operational workflows into scalable SaaS – now applying that to property management at the intersection of AI agents and real-estate process automation.

§ WHY ALINA GROUP

Property management carries some of the most tangled operational workflows in any vertical: tripartite stakeholder relationships between owners, tenants, and service providers, maintenance chains that span weeks, and compliance requirements that create paper trails by necessity. Alina is doing something genuinely hard – rebuilding that coordination layer as a data-driven, AI-native product rather than bolting software onto existing friction. The explicit focus on AI agents and workflow automation in the posting signals that the team understands the difference between a feature list and a system. *That is exactly the kind of product problem where structured requirements thinking compounds fastest.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy work and stakeholder demos
- **Cursor / VSCode**, LLM-assisted development
- **n8n**, agentic workflow and automation design
- **Gamma.app**, product documentation and pitch decks
- **GPT**, research, edge-case generation, user story drafting
- **GitHub Copilot**, developer-side pair programming

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Ionic, CGM API integration, Shopware, low-code platform tooling.

§ SIDE PROJECT

TRUE-NORTH.BERLIN TRUE-NORTH.BERLIN →

Founder-operated product and consulting vehicle for AI-native tooling and workflow automation.

- Serves as the operational base for AI agent framework development, rapid prototyping, and client-facing product engagements.
 - Built on a lightweight consultancy model, using Lovable, Framer, and LLM-assisted tooling to compress discovery-to-prototype time.
 - Active repository across GitHub, covering agentic workflow experiments and specification tooling.
 - Directly relevant: demonstrates the founder-level ownership and speed-to-ship mindset the Alina role calls for.
-

§ HOW I WOULD WORK AT ALINA GROUP

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the founder and any existing user-facing touchpoints – owner, tenant, and service-provider flows in the Alina App – and build a living workflow map of where handoffs break down, where AI agent integration is planned versus shipped, and where the backlog reflects business intent versus engineering convenience.

WEEK 2

Slice and specify.

Pick the highest-friction workflow identified in week one, write crisp user stories with acceptance criteria and edge cases, and run a structured refinement session with the

development team to validate feasibility and surface hidden assumptions before they become sprint blockers.

WEEK 3+

Ship and close loops.

Own a release end-to-end – testing, stakeholder sign-off, go-live communication – and establish a lightweight feedback loop with real users so that the next prioritisation cycle is grounded in evidence, not opinion.

I COVER LETTER

Dear Lukas,

Property management is one of the few domains where the operational complexity is genuinely as hard as it looks from the outside. Tripartite relationships between owners, tenants, and service providers, maintenance chains with external dependencies, and compliance obligations that resist simplification – these are not problems that a generic SaaS workflow engine solves. When I read the Alina job description and saw AI agents and workflow automation named explicitly, alongside direct collaboration with the founder, I recognised a product problem that matches the kind of work I find most energising: taking a messy operational reality and building a system around it that actually holds.

My background is almost entirely in exactly this class of problem. At Rohde and Schwarz I owned a central AI data management platform for a European defence programme, translating requirements from multinational stakeholders into dev-ready specifications, then delivering feature sets end-to-end from user story through GitOps rollout. At the Federal Employment Agency I owned the Arbeitsmarktmonitor analytics platform, introducing automated ETL pipelines with Dagster, migrating legacy systems to Kubernetes, and serving concurrently as deputy IT security officer. At Emil Group I walked into a prototype-stage InsurTech product where client trust had eroded, split a bloated seventeen-person team into effective Scrum units, reintroduced velocity tracking, and ran weekly product workshops until delivery was stable again. Each of these was a different industry, but the mechanic was the same: map the real workflow, write the right requirements, hold the team to the right discipline, and ship.

The AI agent and workflow automation angle in the Alina posting is not incidental to me – it is the direction I have been building toward. I work daily with n8n for agentic workflow design, with Claude Code and Cursor for LLM-assisted specification and implementation, and with Lovable and Framer for rapid prototyping. I am not describing tools I have read about; I use them to compress discovery-to-prototype time on real problems. For a SaaS product that is betting on AI agents to improve maintenance coordination between owners, tenants, and service

providers, having a PM who can evaluate agent design decisions and write technically credible specifications is a meaningful advantage.

On the domain side: I do not have prior real-estate product experience, and I prefer to name that directly rather than paper over it. What I do have is a consistent track record of ramping quickly in new verticals – defence data platforms, public labour-market analytics, health insurance, healthcare apps – and a strong instinct for where the real workflow pain lives versus where it is assumed to live. Property management is a domain I can learn fast, particularly with direct founder access and short decision cycles.

The profile of this role – investor-independent startup, high ownership, direct founder collaboration, international development team, AI product at the centre – is the kind of environment where I do my best work. I would be glad to speak with you about the specifics.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience converting complex operational workflows into scalable SaaS and analytics platforms. Background covers AI data systems, public analytics infrastructure, InsurTech, regulated healthcare apps, and founder-level company building. Comfortable holding full delivery ownership in ambiguous environments – from writing the first user story to managing the GitOps rollout. AI-native by daily practice, technically fluent across modern cloud and data stacks, and accustomed to working directly with founders and cross-functional international teams at pace.

§ CORE STRENGTHS

- Translating complex operational workflows into dev-ready requirements
- AI-native product execution and agentic workflow design
- Backlog ownership, sprint discipline, and velocity management
- Cross-functional stakeholder alignment across business, engineering, and QA
- End-to-end feature delivery from discovery through GitOps rollout
- Structured communication and client trust rebuilding under pressure
- Product discovery and prioritisation under ambiguity

- Technical fluency across APIs, cloud infrastructure, and modern data stacks
 - Founder-level pragmatism, low ego, high agency
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets under the European defence programme FCAS, translating multinational stakeholder requirements into dev-ready specifications
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Improved data quality through filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails (SafeAI, ExplainableAI)
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform, delivering labour shortage analytics, regional comparison features, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned the backlog for a B2B InsurTech SaaS platform covering product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops to rebuild client trust
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
 - Integrated CGM interface into hospital information system workflows
 - Built stakeholder trust through transparent communication of legacy API and external database constraints
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true-RNG hardware; designed for setup under two minutes with no technical knowledge required
- Served concurrently as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Project Lead

- Co-founded an intelligent substrate and fertiliser solution for vertical indoor farming
 - Responsible for digital tooling, financial planning, investor relations, and HR
-
