

Philipp Hilbert. *Integration platform builder with a decade of cross-functional delivery.*

Positioning, Bringing scalable integration architecture and disciplined discovery to Riverty's client onboarding engine – from requirements to shipped standard.

§ WHY RIVERTY

Riverty is solving a genuinely hard problem: onboarding a structurally diverse client base onto a single collections platform without turning every integration into a bespoke project. The job description names scalable standardisation – interfaces, data models, configuration templates – as the core lever, which is exactly the kind of systems-building problem I find most interesting. Bertelsmann's backing gives the mandate long-term credibility, while the FinTech context keeps the pace sharp. The combination of discovery work, cross-team ownership, and the push toward automation is the product work I do best. *That is precisely the environment where structured thinking compounds into durable leverage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, spec review, edge-case generation
- **GPT**, discovery synthesis and stakeholder communication drafts
- **GitHub Copilot**, implementation support and code review
- **Cursor / VSCode**, in-repo refactoring and feature delivery
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframes and concept presentations
- **Gamma.app**, structured product documentation and stakeholder decks

- **n8n**, agentic workflow design and process automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, Redpanda, AngularJS, Ionic, CGM API integrations, Bitbucket, GitOps pipelines, MicroStrategy, Django.

§ SIDE PROJECT

KVITT PAYMENT SOLUTIONS [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A group-based P2P payments product built from scratch, later acquired and operated by Sparkasse.

- Built the full product from concept: group-based P2P payment flows on a P2P backbone, mobile app prototype, PSP integration.
 - Designed the complete UX and UI without external design resources; integrated a payment service provider end-to-end.
 - Operated for five years (2013–2018) before acquisition – real production lifetime, not a portfolio project.
 - Demonstrates the exact integration and payment-flow product thinking relevant to Riverty's onboarding and collections platform work.
-

§ HOW I WOULD WORK AT RIVERTY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow current integration runs end-to-end – from first client requirement through platform configuration to go-live – and map where handoffs break, where manual steps substitute for missing standards, and where the biggest variance lives across client types.

WEEK 2

Identify standardisation leverage.

Identify the two or three configuration decisions that account for the most integration variance and draft a structured options analysis with the tech and operations teams, grounded in what is already reusable versus what is built from scratch each time.

WEEK 3+

Ship the first standard.

Prioritise one recurring integration pattern, define the template or configuration component that makes it repeatable, get it accepted by the client-facing teams, and instrument the metrics that tell us whether onboarding time actually decreases.

I COVER LETTER

Dear Hiring Team at Riverty,

I am applying for the Product Manager Integration role because the core problem – turning a fragmented, high-variance client onboarding process into a scalable, standardised platform capability – is the kind of systems-and-delivery challenge I have spent the better part of a decade working on.

At Rohde & Schwarz I owned a data management platform for the FCAS defence programme, where the constraint was exactly the one you describe: a diverse set of internal stakeholders with different data requirements, and a platform that had to absorb them without becoming a bespoke integration for each one. I designed reproducible data transformation pipelines, introduced audit trails and provenance, and delivered autonomous feature sets end-to-end – user stories through GitOps rollout – in an environment where requirements were never fully stable. The same pattern applies directly to Riverty's integration and onboarding surface.

At the Federal Employment Agency I served as product manager for the Arbeitsmarktmonitor analytics platform and simultaneously as deputy IT security officer. That combination – technical accountability alongside stakeholder-facing product work – trained the habit of translating between what a non-technical stakeholder needs and what an engineering team can sustainably build. I introduced Dagster for automated ETL, standardised CI/CD, and managed Kubernetes migrations: the kind of infrastructure-adjacent product ownership that Riverty's integration platform work demands.

Earlier, at Emil Group, I inherited a B2B InsurTech platform in poor health: a 17-person team with no sprint discipline, near-total senior developer attrition risk, and a client base that had lost confidence in delivery. I split the team, reintroduced velocity tracking and structured

refinement, and rebuilt client trust through weekly product workshops. That experience confirmed something I have relied on since: shared ownership is not a soft concept — it is an engineering artefact. You build it through consistent processes, clear interfaces between teams, and visible accountability for decisions.

The Riverty role asks for someone who can own vision and roadmap while also getting into the weeds on data models, interface standards, and configuration templates. That combination is where I work most naturally. I hold technical context seriously enough to contribute meaningfully in engineering discussions, and I have enough product strategy experience to make sure that standardisation efforts are tied to measurable business outcomes rather than architectural tidiness.

I would welcome the opportunity to speak in more detail. My notice period is four weeks, and I am available across Berlin, Verl, and Baden-Baden on the hybrid model described.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with close to ten years of experience building and scaling digital platforms in regulated, technically demanding environments. Track record spans government defence programmes, public analytics infrastructure, B2B InsurTech SaaS, and early-stage company building. Consistently effective at translating complex operational requirements into structured, scalable product architectures — and at aligning cross-functional teams around shared standards without relying on formal authority. Fluent in AI-native tooling and in the engineering context needed to make platform decisions stick.

§ CORE STRENGTHS

- Translating complex operational workflows into scalable, standardised product architecture
- Cross-functional alignment without formal authority, across business, tech, and operations
- Discovery and prioritisation in ambiguous, fast-moving environments
- Platform product ownership with technical depth (APIs, data models, DevOps)
- Sprint discipline, backlog health, and team restructuring under delivery pressure
- Stakeholder trust-building through transparent communication and structured workshops

- AI-native product execution: requirements, prototyping, and assisted development
 - KPI-oriented roadmap ownership and measurable standardisation outcomes
 - Regulated-environment fluency: compliance, data governance, IT security officer experience
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Designed reproducible data transformation pipelines with full audit trails and data provenance for a multimodal AI platform serving the FCAS European defence programme
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level OpenShift issues independently; delivered in one week a feature engineering had not resolved in over a year
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Introduced Dagster for automated ETL and standardised indicator generation across regional labour market datasets
- Standardised CI/CD with full test integration at build time; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Delivered labour shortage analytics, flexible regional comparison tools, and modernised admin tooling

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Split a bloated 17-person team into focused Scrum units with ownership and deputy concepts; restored sprint discipline and delivery stability
- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers
- Rebuilt client trust in a prototype-stage environment through structured weekly product workshops

- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows (digital anamnesis, meal and therapy plans, transport, chat, document storage) for a mobile-first iOS and Android pilot across hospitals
 - Integrated CGM interface into hospital information system workflows; managed complex legacy API constraints transparently with stakeholders
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product (one-time-pad, true random number generator hardware); USP was sub-two-minute setup with no technical knowledge required
- Served as deputy IT security officer; presented the product in English to international enterprise audiences

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder

- Built a group-based P2P payment product from scratch: PSP integration, full UX and UI design, mobile app prototype
- Product was later acquired and operated by Sparkasse

AOK / ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex product catalogue and API integration and configurable approval policies for a large health insurance client
-

§ LANGUAGES

German, native. English, C2.
