

Philipp Hilbert. *Regional product delivery lead at the intersection of retail, compliance, and multi-team coordination.*

Positioning, Thirteen years owning end-to-end product delivery across regulated, multi-stakeholder environments, now bringing that rigour to Amazon's MENA retail portfolio.

Amazon's OHL Senior PM role in GCC Retail is, by design, a coordination problem at scale. Six tech partner teams, a MENA business context that adds localization, regulatory, and operational readiness layers to every feature, and a portfolio that includes warranty and services programs where legal sign-off is as load-bearing as the code. I have spent thirteen years working in exactly this configuration, regulated, multi-team, high-dependency programmes where the PM's primary job is to hold the entire delivery chain together without owning most of it.

At Rohde & Schwarz, I owned product and delivery for an AI and data platform inside the FCAS European defence programme: multinational team, no direct line authority over the engineering squads, and a delivery cadence that had to survive hotfixes. I introduced GitOps with ArgoCD, reduced rollout time from days to thirty minutes, and made the platform hotfix-capable, a change that required alignment across architects, data scientists, and programme management in three countries. That is the "influenced-but-not-owned" dynamic the job description names, and it is the mode I work in most naturally.

At Scheidt & Bachmann I operated inside a full SAFe release-train setup, moving research results into production across a matrix organisation with PI planning, ART coordination, and shared engineering bandwidth. At the Bundesagentur für Arbeit I served as Deputy IT Security Officer while simultaneously leading a full UI relaunch and a bare-metal-to-container migration, a workload that required keeping Finance, Security, and Operations aligned on status and decisions in parallel. Writing crisp BRDs and PRDs that a globally distributed partner team can act on without a phone call is a discipline I practise in every engagement.

The MENA context is additive rather than familiar: I have not managed a consumer retail category in the Gulf, and I say that plainly. What I bring is a proven pattern of landing quickly in complex, regulated, multi-stakeholder environments, identifying where the delivery chain is fragile, and building the coordination structures that make it robust. The localization and UAT coordination challenges the posting describes are familiar in shape even if the geography is new.

If there is a conversation worth having about the role and the portfolio, I would welcome it.

Best regards, *Philipp Hilbert*
