

Philipp Hilbert. *Product Manager, live intelligence and fan analytics.*

Positioning, ten years shipping data-led SaaS products across regulated and fast-moving environments, now targeting sports and entertainment intelligence.

Dear Simon,

I have spent ten years taking data products from scoped concept to shipped release, in regulated environments where specs have to be airtight, teams are distributed, and delivery pace is the thing that determines whether the product earns its seat at the table. THE·TEAM's Performance product suite, audience data, deal intelligence, valuation automation, fan analytics, is exactly the kind of multi-workstream data SaaS environment I have been building delivery rhythm in since 2017.

At the Bundesagentur für Arbeit I owned a national labour-market analytics platform: I introduced Dagster and dbt so quarterly imports ran without hand-holding, automated the QA pipeline in Jenkins, and carried a full UI relaunch through the same delivery period, all without losing pace on regular releases to policymakers and researchers. At EMIL Group I ran an 18-person delivery organisation that was bleeding senior engineers; I restructured it into three lean teams with their own leads and shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from many months to under a week. Both situations called for exactly what the posting describes: owning the backlog, writing clear specs that design and engineering can execute against without coming back to ask, coordinating dependencies across concurrent builds, and keeping stakeholders informed without being asked.

On the AI side, I work daily with Claude Code, Cursor, GitHub Copilot, and Lovable for spec generation, edge-case enumeration, and rapid prototyping. I have also built a multi-agent coding framework from scratch and run agentic workflows via n8n. I understand where AI accelerates delivery and where it introduces scope risk, and I know that a PM's judgment, stakeholder credibility, and delivery discipline are what make those tools produce results rather than noise.

The sports and entertainment domain is new to me at the professional level, but the product mechanics are familiar: structured data pipelines, commercial decision-support tools, and internal client teams who need to embed the product into their day-to-day before the value is visible. I am genuinely interested in how audience intelligence and fan analytics are reshaping commercial strategy in sport, it is a problem space with real complexity and real stakes.

The role is based in Dubai, which is a location I am actively targeting and willing to relocate to. I am available at short notice and ready to move quickly once an offer is in place.

Best regards, *Philipp Hilbert*
