Dear Hiring Team at TASC Outsourcing,

I am writing to apply for the Product Manager role. With thirteen years of product ownership across regulated B2B environments, insurance, defence AI, public-sector analytics, healthcare, and fintech, I have built and shipped products end-to-end, from user research and backlog prioritisation through to Agile delivery and post-launch measurement. The scope you describe, owning vision, strategy, and roadmap while facilitating Scrum ceremonies and aligning cross-functional stakeholders, is the work I do daily.

What makes this role specifically interesting is the UAE market context. I have been targeting the Gulf as a relocation destination for some time and am prepared to move to Dubai or Abu Dhabi at short notice. I understand that a workforce platform in the UAE faces product challenges that do not exist elsewhere: a highly international employee population, layered compliance requirements, and the need to earn trust quickly with both the enterprise buyer and the individual worker. I built construct8, a two-sided B2B marketplace for construction staffing, specifically to solve that last problem, an anonymity-until-payment model that protects each party until commitment is established. That work sharpened my instincts for two-sided platforms, conversion funnel analysis, and the operational mechanics of matching supply to demand.

On the delivery side, I bring hands-on Agile depth. At Rohde & Schwarz I led a cross-functional team of fifteen engineers and data scientists through Scrum in Jira, running sprint planning, stand-ups, sprint reviews, and retrospectives for a defence-grade AI and data platform. At CLINET Platforms I inherited a backlog a five-person team could not deliver, cut it to the top ten percent of features against agreed success measures, and saw user acceptance rise more than fivefold. At EMIL Group I restructured an eighteen-person delivery organisation that was losing its senior engineers, formed three lean teams with their own leads, and shipped the Claims Center from concept to production. In each case, the discipline was the same: clear user stories with acceptance criteria, a prioritised backlog, and honest communication with stakeholders on status, risks, and trade-offs.

I am equally comfortable translating customer requirements into technical specifications and working directly with engineering and design. My background in industrial engineering means I read architecture diagrams and system constraints without difficulty; my product instinct is to protect the engineering team from noise while keeping them pointed at the highest-value work.

I would welcome the chance to speak in more detail about the role and the product challenges TASC is working through. Thank you for your time and consideration.

Best regards, *Philipp Hilbert*
