

Philipp Hilbert. *Requirements-to-delivery bridge for AI-powered B2B SaaS.*

Positioning, ten years of technical BA and product ownership across backend-heavy SaaS, ETL platforms, and API integrations, built for a role where the gap between business and engineering has real cost.

§ WHY NAMELESS VENTURES

A B2B SaaS iGaming company building AI-powered products sits at the intersection of two things that genuinely interest me: regulated, data-intensive backend platforms and the emerging wave of generative AI applied to vertical software. The posting calls out APIs, stream endpoints, and data pipelines as daily territory, which is precisely the environment I have spent the last three years navigating, most recently on a safety-critical AI data platform for a European defence programme. The combination of backlog ownership, stakeholder translation, and technical depth the role demands is not a stretch for me; it is the work I do. *That is exactly where my strengths compound.*

§ HONEST FRAMING

I have not held a role inside a gaming or iGaming company. What I do bring is years of hands-on experience as a serious poker player, years with PokerTracker and Hold'em Manager, and as a hand reviewer on PokerStrategy.com, which gives me genuine product intuition about what operators and players actually need, rather than an outsider's guess.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GPT**, requirements drafting and edge-case simulation
- **Cursor / VSCode**, development environment with AI pair programming
- **n8n**, multi-agent and integration workflow orchestration
- **Lovable**, rapid frontend prototyping
- **Gamma.app**, stakeholder-facing documentation and decks
- **GitHub Copilot**, inline code assistance across Python and Kotlin
- **Framer**, design-heavy interface mockups

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, PostgreSQL, MongoDB, REST APIs, Kafka, Dagster, dbt, DuckDB, Kubernetes, OpenShift, ArgoCD, Helm, Terraform, Argo Workflows, Docker, Jenkins, GitOps, Shopware, n8n, Replit.

§ HOW I WOULD WORK AT NAMELESS VENTURES

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with engineering, data, and the business to map the existing API surface, data pipeline dependencies, and backlog state, building the vocabulary the team already uses before proposing anything.

WEEK 2

Slice and sharpen.

Take the murkiest items in the backlog and rewrite them as properly sequenced user stories with explicit acceptance criteria and API contract references, surfacing hidden cross-team dependencies early.

Ship and close loops.

Own the refinement cadence end to end, drive the first release through staging and production, and instrument at least one flow so that business value is observable rather than assumed.

I COVER LETTER

Nameless Ventures is building AI-powered iGaming software, a domain that combines real-time data pipelines, complex backend integrations, and a user base that holds the product to an unusually high standard. That combination is exactly what makes this role interesting to me, and it is the environment I have been building toward with the last decade of my career.

At Rohde & Schwarz I owned a module of the AI data backbone for the FCAS European defence programme. Practically, that meant translating multimodal sensor data requirements into reproducible, auditable ETL pipelines, writing the specifications that governed how data scientists and infrastructure engineers worked together, and owning the backlog through to production rollout. Deployment times dropped from several days to under 40 minutes after I resolved an infrastructure dependency that had been blocking engineering for over a year, not by writing the infrastructure myself, but by mapping the constraint clearly enough that the right people could solve it fast. That is the kind of translation work your posting describes.

At the Bundesagentur für Arbeit I introduced automated ETL orchestration across a national analytics warehouse, introduced CI/CD standards, and served as deputy IT security officer through recurring audit cycles. Governance, data lineage, and compliance under pressure are not abstractions to me. At EMIL Group I built a claims module from zero, no specification, no precedent, by running discovery directly with the pilot customer's claim specialists, then restructuring a 17-person delivery organisation that had stalled into teams that could genuinely own something end to end. Velocity returned. Client trust returned.

Beyond the professional record, I bring something specific to an iGaming context: years of serious poker play, including extended use of PokerTracker and Hold'em Manager and a period as a hand reviewer on PokerStrategy.com. That is not a footnote, it is direct product-user experience with the analytical tooling and feedback loops that serious players rely on, and it informs how I think about what an AI-powered iGaming product actually needs to do to earn adoption rather than merely exist.

My working mode is AI-native. I use Claude Code, GPT, Cursor, and a multi-agent orchestration framework I built myself to compress the distance between a specification and a working prototype. That matters for a role at the intersection of backlog ownership and technical depth, because it means I can validate an idea at the interface level before it enters refinement, and I

can review an API contract or a data schema directly rather than relaying questions through intermediaries.

The role is in Dubai. I am actively targeting the UAE and willing to relocate. This is not a location compromise, it is a deliberate direction.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a senior product owner and technical business analyst with ten years of experience sitting between business, engineering, data, and QA on backend-heavy SaaS and data platform products. He has owned backlogs through full delivery cycles in regulated environments including national defence, federal public administration, and B2B insurance, and has a practical track record of translating ambiguous stakeholder requirements into precise user stories, API contracts, and acceptance criteria that engineering teams can act on without further interpretation. His working mode is AI-native: he uses agentic tooling to compress discovery, specification, and prototyping into a single fast loop, and he treats delivery, test automation, and operations as part of the product surface rather than somebody else's concern.

§ CORE STRENGTHS

- User stories, functional specs, and acceptance criteria for backend-heavy products
- API, integration, and data pipeline requirements engineering
- Backlog ownership and sprint discipline under Agile and SAFe
- Stakeholder alignment across engineering, data science, QA, and business
- ETL pipeline and data platform product ownership
- AI-native product execution with agentic tooling and multi-agent orchestration
- Risk-first discovery: resolving the largest uncertainty with the cheapest instrument
- Hands-on iGaming domain knowledge as a serious poker player and tool user
- Cross-functional team restructuring and velocity recovery

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Designed a two-sided B2B marketplace matching construction firms with workers, with full AI-assisted discovery, vetting, and operations
- Defined user journeys across three user groups: contractors, workers, and internal operations staff
- Embedded the product inside WhatsApp and Telegram, the channels users actually inhabit, rather than building a standalone destination

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Full backlog ownership from discovery to production rollout for a module of the central AI data backbone of a European defence programme
- Authored reproducible pipeline specifications with complete provenance and audit trails for safety-critical ML training and evaluation
- Reduced deployment times from several days to 20, 40 minutes by mapping and resolving an infrastructure constraint engineering had not been able to unblock in over a year
- Steered a multinational team of architects, data scientists, engineers, and QA across requirements, release definition, and production handover

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Introduced automated ETL orchestration and standardised CI/CD across a national analytics warehouse used by policy makers and researchers
- Deputy IT security officer: compliance, governance, and data lineage under a recurring audit cycle
- Owned requirements and backlog for pipeline and platform initiatives using Python, PostgreSQL, Dagster, dbt, and Kubernetes

EMIL GROUP 2022, 2022

Product Manager, B2B SaaS Platform

- Delivered modules spanning product configuration, pricing, underwriting, policy issuance, and document workflow automation on a B2B insurance SaaS platform

- Built a claims module from zero with no prior specification: ran discovery directly with the pilot customer's claim specialists and instrumented the claim flow so that churn per process step became the leading prioritisation signal
- Restructured a 17-person delivery organisation into teams capable of genuine end-to-end ownership; restored velocity and client trust, and stopped an almost complete senior-engineer exodus

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for multiple distinct user groups
- Implemented the interface into the incumbent clinical system landscape directly, rather than relaying integration requirements through intermediaries
- Cut an overambitious roadmap to the ten percent of features that delivered the clinical use case

BUNDESDRUCKEREI 2021, 2021

Product Owner, National Health Data Platform

- Owned requirements and backlog for secure data structures and identity management under the highest privacy standards, supporting national pandemic monitoring

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team (Fuel and Convenience Retail)

- Product Owner of the integration team downstream of research: translating research outcomes into releasable integrations across point-of-sale, payment, and forecourt systems
- Backlog ownership in a fully SAFe organisation: PI planning, release train coordination, cross-team dependency management
- Operated across a complex matrix spanning multiple geographies and engineering disciplines

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Owned requirements and backlog for the migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers, with catalogue and API integration into legacy systems and per-unit approval workflows

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, and full user experience; acquired and operated by Sparkasse
- As CFO owned accounting, financial planning, and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Co-founded and owned product for a quantum-secure encryption product across a three-layer hardware and software architecture
- Delivered to enterprise customers under a sub-two-minute installation constraint

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Took a nanotechnology product from laboratory to investor rounds; owned finance, HR, and the ERP rollout
