

Philipp Hilbert. *Full-stack product ownership across regulated, high-growth platforms.*

Positioning, Ten years building technical products end-to-end, from payment rails to defence AI, for teams that need one person who can hold a roadmap and a technical conversation simultaneously.

§ WHY REVOLUT

Revolut's job description asks for a Product Owner who can own a roadmap, have technical discussions with engineers, and collaborate with Financial Crime, Legal, and Security, that is precisely the combination I have operated at, across payments infrastructure, a national health data platform under continuous audit, and a defence AI programme with strict provenance requirements. The explicit requirement for 1 year of people management, covering engineering, operations and design, reflects a structural reality most fintech POs avoid; I have done it, including rebuilding a stalled 17-person delivery organisation. The posting also names crypto, payments and insurance as relevant domains, I have shipped production work in all three. *That breadth, paired with a bias toward action over committee, is exactly the profile this role requires.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo specification and edge-case generation
- **GPT**, discovery synthesis and stakeholder narrative drafts
- **Cursor / VSCode**, assisted backend and integration work
- **Lovable**, rapid UI prototyping before engineering commitment
- **Framer**, design-heavy interface iteration

- **n8n**, multi-agent workflow orchestration
 - **GitHub Copilot**, sprint-level implementation support
 - **Gamma.app**, product communication and leadership decks
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, ArgoCD, Helm, GitOps, Docker, Terraform, Argo Workflows, Jenkins, Kafka, Python, Kotlin, JavaScript, PostgreSQL, MongoDB, REST APIs, Dagster, dbt, DuckDB, distributed ETL pipelines, CI/CD automation, SAFe PI planning, payment service provider integration, settlement flows, identity management, and audit-grade data lineage tooling.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Infrastructure-oriented backtesting and bot framework for crypto market research.

- Implements a backtesting engine for algorithmic trading strategies across centralized and decentralized venues, including perpetual futures and spot.
 - Built on a file-queue-based multi-agent coordinator pattern with evaluator and implementer agents working under designed guardrails.
 - Covers market microstructure analysis, slippage, price impact, routing, and risk management, informed by hands-on use of Coinglass, Hyblock Capital, and execution on Hyperliquid, Bitget, Jupiter, and Across Protocol.
 - Directly relevant to Revolut's crypto product surface: practical understanding of CEX/DEX mechanics, AMMs, bridging, and stablecoin infrastructure from an operator's perspective, not a spectator's.
-

§ HOW I WOULD WORK AT REVOLUT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the engineering and operations leads, read the existing roadmap and incident history, map every cross-functional dependency the posting names, Financial Crime, Legal, Security, and identify where requirements are ambiguous or ownership is unclear.

WEEK 2

Align on metrics.

Facilitate a working session with engineering and design to agree what success looks like for the current quarter, surface the two or three highest-uncertainty bets, and propose the cheapest instrument to resolve each.

WEEK 3+

Ship and instrument.

Take the first prioritised item from discovery to a refined, testable story, establish a measurement baseline for the feature before release, and close the loop with the stakeholders who raised the original requirement.

I COVER LETTER

Revolut is asking for someone who can own a technical product roadmap, hold substantive engineering conversations, and navigate compliance and security stakeholders without losing momentum. That is the exact combination I have built over ten years, not as a sequence of roles but as a simultaneous discipline.

At Rohde & Schwarz I owned a module of the central AI backbone for a European defence programme. The constraints there, complete data provenance, audit-grade lineage, safety-critical reproducibility, are materially harder than most fintech compliance requirements, and I drove that product from discovery to production. Deployment times dropped from several days to under forty minutes after I resolved an infrastructure blocker that had sat open for over a year. At Bundesagentur für Arbeit I held the deputy IT security officer designation while delivering a warehouse-grade ETL platform used by national policy researchers, running through recurring external audits. I understand what Financial Crime, Legal and Security counterparts actually need from a Product Owner: precision in requirements, traceability in delivery, and a partner who does not treat compliance as an afterthought.

The payments domain is foundational to my background. Kvitt Payment Solutions, which I co-founded, was a mobile payments platform built from scratch with full PSP integration, settlement flows and onboarding UX, acquired and operated by Sparkasse. Qcrypt AG, my

second venture, shipped quantum-secure encryption under a strict sub-two-minute enterprise installation constraint. Both taught me that payment and security products have no tolerance for discovery shortcuts: edge cases that look theoretical in a workshop become incident tickets in production. That lesson shaped how I approach every new product surface since.

Revolut's requirement for direct people management across engineering, operations and design is notable because most product roles at this level keep the PM at arm's length from the team. At EMIL I inherited a 17-person delivery organisation that had lost momentum and was haemorrhaging its senior engineers. I restructured it into teams that could own something end to end, restored client trust and stopped an almost complete leadership exodus at a single departure. That experience made clear that team structure is a product decision with as much downstream impact as any roadmap choice.

I work AI-native and have for some time, not as a productivity footnote but as a structural change in how I approach delivery economics. With a multi-agent framework I built and operate myself, I cover requirements, interface design, automated testing and infrastructure at a pace that has meaningfully compressed the distance between discovery and shipped product. I bring that same approach to any team I join, which accelerates the pace at which we learn whether a bet was right or wrong.

I would welcome the opportunity to discuss where your current platform challenges sit and what a first quarter might concretely look like.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years of end-to-end product ownership in regulated, technically complex environments, payments infrastructure, national data platforms, defence AI, and B2B SaaS. I own roadmaps from discovery through production, hold technical conversations with engineers as a peer rather than a translator, and build the cross-functional alignment with Legal, Security and Compliance that high-stakes fintech products require. My working style is AI-native, data-driven, and biased toward the cheapest experiment that resolves the largest open uncertainty.

§ CORE STRENGTHS

- Technical product ownership across distributed systems, payments, and data platforms

- Cross-functional stakeholder navigation: engineering, legal, compliance, security
 - People management: team restructuring, velocity recovery, retention
 - Data-driven prioritisation with defined success metrics before build
 - Payment rail and PSP integration, settlement flow, and fintech UX design
 - Continuous discovery: problem-first, prototype-cheap, measure-before-ship
 - DevOps and infrastructure fluency sufficient to steer architecture decisions
 - AI-native execution: multi-agent frameworks, automated testing, rapid prototyping
 - Regulated environment delivery: audit trails, data lineage, IT security governance
-

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace, Construction Industry

- Zero-to-one marketplace: product vision, strategy and discovery across contractors, workers and internal operations
- Full AI assistance pipeline from worker vetting to operations, enabling one person to run the day-to-day business
- User journey design across three distinct actor groups in channels users actually live in (WhatsApp, Telegram)

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform, FCAS Defence Programme

- Full ownership from discovery to production on a module of the central AI backbone for a European defence programme
- Reduced deployment times from several days to 20, 40 minutes; resolved an infrastructure blocker open for over a year
- Reproducible pipelines with complete provenance and audit trails for safety-critical machine learning datasets
- Steered a multinational team of architects, data scientists, engineers and QA across delivery and release definition

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- National ETL analytics platform used by policy makers and researchers across Germany
- Deputy IT security officer: compliance, governance and data lineage under a recurring external audit cycle

- Introduced automated ETL orchestration and standardised CI/CD, materially reducing release friction

EMIL GROUP 2022, 2022

Product Manager, B2B SaaS Platform, Insurance

- Built a claims module from zero with no specification, running discovery directly with pilot customer claim specialists
- Restructured a 17-person delivery organisation into effective, end-to-end-owning teams; restored velocity and client trust
- Delivered modules across product configuration, pricing, underwriting, policy issuance and document workflow
- Instrumented claim flow so churn per process step became the leading prioritisation metric

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for several distinct clinical user groups
- Implemented the interface into the incumbent clinical system landscape directly
- Cut an overambitious roadmap to the most impactful ten percent of features, protecting delivery capacity

BUNDESDRUCKEREI 2021, 2021

Product Owner, National Health Data Platform

- Secure data structures and identity management for national pandemic monitoring under the highest privacy requirements

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team, Fuel and Convenience Retail

- Product Owner of the integration team downstream of research: turning outcomes into releasable integrations across site and head-office payment and forecourt systems
- Backlog ownership in a fully SAFe organisation: PI planning, release train coordination, cross-team dependency management

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers
- Catalogue and API integration into legacy systems with approval workflows per organisational unit

ENERCON 2019, 2019

Project Lead, IT Modernisation

- Full IT modernisation of a manufacturing site in the wind energy sector: hardware, servers, switches and communication infrastructure

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, full user experience
- Acquired and operated by Sparkasse; as CFO owned accounting, financial planning and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Quantum-secure encryption across a three-layer hardware and software architecture, shipped to enterprise customers
- Sub-two-minute installation constraint shaped every architecture and packaging decision

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Nanotechnology product from laboratory to investor rounds; owned finance, HR and ERP rollout
