

Philipp Hilbert. *Consumer-finance product leader with a fintech founding track record.*

Positioning, ten years shipping regulated financial and data products, from mobile payments to insurance platforms, now targeting Revolut's consumer product challenges.

§ WHY REVOLUT

Revolut is one of the few companies that has genuinely re-architected how consumers relate to their money, not by digitising bank branches but by questioning which features a bank actually needs. The job description calls out ownership of a product roadmap from conception through launch and growth, with direct collaboration across Design, Engineering, and Data, that is the exact operating model I have used across every role in the last six years, not aspirationally but as delivered practice. What draws me specifically is the intersection of consumer UX ambition and the compliance rigour that a regulated financial super-app demands: both sides of that tension are present in my background. *That is exactly the environment where careful discovery and fast iteration compound into something customers feel rather than just use.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GPT**, requirements drafting and edge-case generation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy interface mock-ups
- **Gamma.app**, stakeholder presentation decks

- **n8n**, multi-agent and automation workflow orchestration
 - **GitHub Copilot**, code review and pair-implementation
 - **Cursor / VSCode**, day-to-day development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Production work spans Kubernetes, OpenShift, ArgoCD, Helm, GitOps pipelines, Docker, Kafka, Jenkins, Python, Kotlin, JavaScript, PostgreSQL, MongoDB, Dagster, dbt, DuckDB, REST APIs, and Argo Workflows across defence, insurance, health, and fintech platforms.

§ SIDE PROJECT

BACKTESTING ENGINE FOR CRYPTO MARKETS [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal infrastructure project at the intersection of market microstructure and algorithmic execution.

- Builds and runs systematic back-tests against historical order-book data across centralised and decentralised venues including Hyperliquid and Bitget.
 - Designed around a file-queue-based multi-agent loop with coordinator, implementer, and evaluator agents operating under guardrails.
 - Covers execution concepts including slippage, price impact, routing, liquidation heatmaps, and risk management informed by Coinglass and Hyblock Capital analytics.
 - Directly relevant to Revolut's crypto and investing verticals: hands-on understanding of DEX aggregation, cross-chain bridging, perpetual futures, and the infrastructure layer that makes digital assets usable at consumer scale.
-

§ HOW I WOULD WORK AT REVOLUT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with Design, Engineering, and Data to map the current customer journey for the assigned feature area, identify where qualitative signal is thin and where the backlog is driven by opinion rather than evidence.

WEEK 2

Align on metrics.

Define the leading and lagging indicators that would tell us the feature is working before a full delivery cycle completes, and socialise them with senior management to anchor the roadmap narrative in measurable outcomes.

WEEK 3+

Ship, instrument, iterate.

Drive the first release to users, instrument the critical flow steps so churn per step becomes the primary prioritisation input, and close the first feedback loop with a follow-on slice within the same sprint cycle.

I COVER LETTER

Dear Revolut Product Team,

I am applying for the Product Owner (UX) role because the combination of consumer-facing mobile product ownership, cross-functional collaboration, and data-informed prioritisation described in the posting matches how I have been working for the past decade, not as an aspiration but as a documented delivery pattern.

My most directly relevant background is the Kvitt Payment Solutions chapter: I co-founded a mobile payments platform from zero, owned the PSP integration, settlement flows, user onboarding, and the full payment UX, and took the product through to acquisition and operation by Sparkasse. That experience taught me that consumer financial products fail not because the feature is missing but because the edge cases in the payment flow, the error states, the failed authorisation screens, are treated as engineering detail rather than product responsibility. I treat them as product responsibility. More recently at Scheidt and Bachmann I owned point-of-sale and payment systems for petrol station retail, working across a complex SAFe organisation that required PI planning, release train coordination, and cross-team dependency management at scale, which maps directly to Revolut's coordination demands across Design, Engineering, and Data.

At EMIL Group I was handed a 17-person delivery organisation that had stalled and was haemorrhaging its senior engineers. I restructured it into teams that could own something end to end, restored velocity, and rebuilt client trust through a claims module I took from zero to production by running discovery directly with pilot customers' claim specialists. No specification existed. That required exactly the entrepreneurial drive and tolerance for ambiguity the posting names as essential. The metric I installed, churn per claim process step, became the team's primary prioritisation input and replaced opinion-based backlog discussions.

Revolut's consumer UX ambition is visible in every product surface it ships: the card spend notifications, the savings vaults, the crypto interface, the travel insurance flow. What I would bring to that is a working discipline of not shipping until the customer journey has been stress-tested against the failure modes a user actually encounters, combined with the analytical infrastructure to know within days of launch whether the bet paid off. I have been doing crypto as a practitioner for eight years, including hands-on use of perpetual futures, DEX aggregators, cross-chain bridging, and market microstructure analytics, which gives me a user's fluency in the product areas where Revolut is growing fastest.

I would welcome the chance to talk through how my background maps to the specific feature area this team is hiring for.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product leader with ten years of experience across regulated financial platforms, B2B SaaS, and consumer mobile products. He has co-founded and taken a mobile payments company through to acquisition, owned full product roadmaps from discovery to production in defence, insurance, and public-sector data programmes, and restructured delivery organisations that had lost momentum. His operating mode is discovery-first and data-anchored: he defines success metrics before the first sprint, instruments customer flows so that churn per step replaces opinion in prioritisation, and treats the time from defect to fix as a product metric. He works AI-first across the full software value chain.

§ CORE STRENGTHS

- Consumer payment UX and PSP integration, from zero to acquired
- Discovery-led roadmap ownership under regulatory and compliance constraints
- Cross-functional alignment across Design, Engineering, Data, Legal, and Marketing
- Restructuring delivery organisations and restoring trust and velocity
- Instrumented product launches with leading indicators defined before build
- Claims and underwriting product built from zero with no prior specification
- Backlog management, sprint discipline, SAFe PI planning, and release train coordination

- AI-native execution: multi-agent frameworks, rapid prototyping, spec generation
 - Crypto and DeFi domain fluency across CEX, DEX, perpetuals, and bridging
-

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Zero-to-one consumer-side product: vision, strategy, and ongoing discovery across three user groups
- User journey optimisation for contractors, workers, and internal operations staff
- AI-assisted interview, selection, and vetting flows to keep operational cost minimal

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Full ownership from discovery to production: requirements, backlog, release definition, rollout
- Deployment times reduced from several days to 20 to 40 minutes, resolving an infrastructure blocker engineering had not cracked in over a year
- Reproducible pipelines with complete provenance and audit trails for safety-critical use
- Steered a multinational team of architects, data scientists, engineers, and QA

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- National analytics platform used by policy makers and researchers across Germany
- Introduced automated ETL orchestration and standardised CI/CD
- Deputy IT security officer: compliance, governance, and data lineage under a recurring audit cycle

EMIL GROUP 2022

Product Manager, B2B SaaS Platform

- Built a claims module from zero with no specification, running discovery directly with pilot customer claim specialists
- Restructured a 17-person delivery organisation into effective teams; restored velocity and client trust
- Instrumented the claim flow so churn per process step became the leading prioritisation metric

- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for distinct user groups
- Implemented the interface into incumbent clinical system landscape
- Cut an overambitious roadmap to the most important ten percent of features, enabling a clean launch

BUNDESDRUCKEREI 2021

Product Owner, National Health Data Platform

- Secure data structures and identity management for national pandemic monitoring, under the highest privacy requirements
- Ownership of data access controls and audit trail design in a regulated identity context

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team (Fuel and Convenience Retail)

- Product owner of the integration team for point-of-sale, payment, and forecourt systems
- Backlog ownership in a fully SAFe organisation: PI planning, release train coordination, cross-team dependency management
- Worked across a complex matrix organisation spanning geographies and disciplines

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers
- Catalogue and API integration into legacy systems with approval workflows per organisational unit

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, and full consumer payment UX
- Acquired and operated by Sparkasse

- As CFO owned accounting, financial planning, and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Quantum-secure encryption across a three-layer hardware and software architecture
- Shipped to enterprise customers under a sub-two-minute installation constraint

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Nanotechnology product from laboratory to investor rounds
- Owned finance, HR, and ERP rollout
