Dear Hiring Team,

Your posting describes a Product Owner who closes the loop between client conversations and technical delivery, someone who can hold a trusted advisory relationship with an account while simultaneously keeping a distributed engineering team moving in the right direction. That is the role I have been doing, in various forms, for thirteen years.

At EMIL Group I walked into an 18-person delivery organisation that was losing its senior engineers and, with them, its client confidence. I restructured the team into three focused units with their own leads, reversed nearly all attrition, and shipped the Claims Center, a product with no internal precedent, from concept to production. That required equal parts client management and internal leadership: rebuilding trust with insurers and reinsurers while giving engineers enough structural clarity to actually deliver. At CLINET Platforms I was handed a mobile patient-app roadmap the team plainly could not execute. I cut it to the top ten percent of features against agreed success measures, and user acceptance rose more than fivefold. Prioritisation is easy to talk about; the hard part is having the conversation with a stakeholder about what is coming out.

The Jobgether posting specifically emphasises consultative client relationships and account growth over transactional sales. My Kvitt Payment Solutions was acquired and operated by Sparkasse within the girocard ecosystem, the path to that outcome was entirely relationship-driven, built on understanding how payment flow fits a bank's existing product surface rather than pitching features. At Qcrypt AG I was the client-facing voice for a quantum-secure encryption product sold into enterprise security environments: long sales cycles, technically demanding buyers, and a requirement to make a genuinely novel technology legible to decision-makers who were not cryptographers. The YouTube sample linked in my profile captures exactly that register, business-level English, technical subject, non-technical audience.

On the AI-assisted tooling dimension: this is not a claim I make to pattern-match a job description. I use Claude Code and GitHub Copilot in my daily workflow, built my construct8 marketplace using LLM agents across the funnel, and have designed agentic pipelines in n8n for operational automation. I treat these tools as force multipliers that let one product person hold more context and move faster, which is exactly the leverage a distributed team across 60 countries needs from its Product Owner.

The remote, multi-timezone structure you describe is the environment I have operated in consistently: Rohde & Schwarz across a multinational FCAS programme, Bundesagentur für Arbeit from remote, CLINET and EMIL across Berlin and beyond. I am based in Berlin and available at short notice.

Best regards, *Philipp Hilbert*
