

Philipp Hilbert. *Outcome-driven Product Owner for fintech delivery.*

Positioning, ten years of backlog-to-delivery ownership across regulated B2B SaaS, payments, and AI platforms, now bringing that to Corpay's corporate payments team.

§ WHY CORPAY

Corpay operates at the intersection of payment infrastructure and enterprise workflow automation, a domain where the gap between a well-written story and a misunderstood requirement costs real money and real customer trust. The job description is explicit that this team is actively building with AI-assisted code generation and an evolving AI-driven SDLC; that is not a checkbox here but a working practice. What draws me in is the mob-session model: engineers, PO, and clarity in the same room until ambiguity is gone, that is how I have worked at Rohde & Schwarz and Scheidt & Bachmann, and it is the right way to move fast without rework. *That is exactly the environment where my facilitation and delivery instincts compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo feature delivery and spec generation
- **GitHub Copilot**, pair-programming and acceptance-criteria drafting
- **Lovable**, rapid clickable prototypes from requirement briefs
- **Framer**, design-heavy workflow mock-ups
- **Gamma.app**, stakeholder decks and discovery read-outs
- **GPT**, story refinement, edge-case generation, backlog grooming prep
- **n8n**, agentic workflow automation and integration orchestration
- **Cursor / VSCode**, daily AI-assisted development environment

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kafka, Kotlin, Python, Dagster, dbt, Kubernetes, OpenShift, ArgoCD, Jenkins, GitLab, Azure DevOps, PostgreSQL, MongoDB, REST APIs, WhatsApp and Telegram APIs, LLM agents, Shopware, CGM/KIS clinical interfaces, POS and payment/forecourt systems, Git, Jira, Confluence.

§ HOW I WOULD WORK AT CORPAY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the Scrum ceremonies, read the existing backlog top-to-bottom, and map the flow from business request to acceptance criteria, identifying where intent gets lost between stakeholder and engineer before touching a single story.

WEEK 2

Sharpen story quality.

Run the first mob session with engineering to rewrite the top ten backlog items against measurable outcomes and clear acceptance criteria, using AI-assisted drafting to cut the prep cycle in half.

WEEK 3+

Own delivery rhythm.

Hold the backlog prioritization cadence, triage incoming bugs and requests against defined success measures, and close the feedback loop with stakeholders on scope trade-offs, so the team ships with confidence rather than assumption.

I COVER LETTER

Dear Corpay Hiring Team,

Corporate payments is one of the last enterprise workflow categories where paper-era processes still masquerade as modern software. The gap between what AP teams need and what they

actually get shipped is mostly a translation problem, and translating between business intent, customer pain, and engineering execution is precisely what I have spent ten years doing.

At Scheidt & Bachmann I owned the PO role for a payment and forecourt integration platform inside a SAFe release train, running PI planning, coordinating across streams, and keeping scope tight against committed outcomes. At Rohde & Schwarz I inherited a multimodal AI data platform that was UI-heavy, slow to release, and opaque to its developer users. I restructured the backlog around measurable outcomes, partnered with engineering to shift the product to a code-friendly interface, and cut rollout time from days to thirty minutes while making the pipeline fully hotfix-capable. Both engagements required the same core skill the Corpay posting names explicitly: serving as the single accountable owner for intent translation under delivery pressure.

What I notice in the job description, and find genuinely interesting, is the mob-session model and the active investment in AI-assisted SDLC. I use Claude Code, GitHub Copilot, GPT, and Lovable daily for story refinement, edge-case generation, and rapid prototyping. At construct8 I am currently owning production code end-to-end without writing it: requirements become prototypes in a day, prototypes become scoped stories, stories drive AI-assisted implementation. Bringing that working mode into Corpay's delivery cycle, especially for a team already building with these tools, is a straightforward fit rather than a learning curve.

On domain: I do not have years of AP Automation or Commercial Card experience as an employee. What I do have is direct product ownership of payment flows at Scheidt & Bachmann, a founder track that includes Kvitt, a mobile P2P payments product acquired by Sparkasse, and ten-plus years of owning regulated, integration-heavy B2B SaaS backlogs. The mechanics of payment authorization, reconciliation edge cases, and enterprise finance workflow are familiar territory; the Corpay-specific vocabulary I will close in the first two weeks.

I work remote and would be available within four weeks of an offer. I would welcome a conversation about the team's current delivery challenges and what good looks like for the first quarter.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years of product ownership across regulated B2B SaaS, payment systems, defence AI platforms, and public data infrastructure. I translate business goals into outcome-driven backlogs, run cross-functional alignment with engineering and stakeholders, and operate AI-first

throughout the delivery lifecycle. My default mode is continuous discovery under delivery pressure, defining success measures before we build, resolving the largest uncertainty first, and keeping teams focused on outcomes rather than output.

§ WHAT I CAN DO

Product craft. Continuous discovery, outcome negotiation, backlog and release ownership, mob facilitation, metric definition before build, SAFe PI planning and release trains.

AI-first building. Claude Code, GitHub Copilot, Lovable, Framer, GPT, Gamma.app, n8n, story refinement, edge-case generation, AI-assisted SDLC, full prototype-to-delivery ownership.

Integration and platforms. Payment and forecourt systems, clinical interfaces (CGM/KIS), e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram), REST APIs.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration, analytics platforms. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud and delivery. Bare-metal to container migration, GitOps rollout and hotfix pipelines. Kubernetes, OpenShift, ArgoCD, Jenkins, GitLab, Azure DevOps.

Regulated environments. Defence, public sector, health data, insurance: identity management, audit cycles, highest privacy requirements.

Working tools: Jira, Confluence.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build; AI-assisted operations including WhatsApp/Telegram API integrations and LLM agent workflows owned end-to-end.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Shifted platform from UI-heavy to dev-code-friendly; cut rollout from days to 30 minutes, fully hotfix-capable. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Delivered bare-metal-to-container migration, UI relaunch, and large ETL migration; public labour-market data made searchable and trend-ready. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Launched Claims Center; restructured a 17-person team into three focused squads with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking with identity management and highest privacy controls.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems inside a SAFe release train; PI planning and release train coordination.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Full legacy-webshop migration to modern Shopware for approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation across end devices, servers, switches, lines, and software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile P2P payments, acquired by Sparkasse) · Qcrypt (quantum-resistant encryption) · Smart Soil Technologies (nanotech)
