

Philipp Hilbert. *Outcome-driven Product Owner for fintech delivery.*

Positioning, ten years of backlog-to-delivery ownership across regulated B2B SaaS, payments, and AI platforms, now bringing that to Corpay's corporate payments team.

Dear Corpay Hiring Team,

Corporate payments is one of the last enterprise workflow categories where paper-era processes still masquerade as modern software. The gap between what AP teams need and what they actually get shipped is mostly a translation problem, and translating between business intent, customer pain, and engineering execution is precisely what I have spent ten years doing.

At Scheidt & Bachmann I owned the PO role for a payment and forecourt integration platform inside a SAFe release train, running PI planning, coordinating across streams, and keeping scope tight against committed outcomes. At Rohde & Schwarz I inherited a multimodal AI data platform that was UI-heavy, slow to release, and opaque to its developer users. I restructured the backlog around measurable outcomes, partnered with engineering to shift the product to a code-friendly interface, and cut rollout time from days to thirty minutes while making the pipeline fully hotfix-capable. Both engagements required the same core skill the Corpay posting names explicitly: serving as the single accountable owner for intent translation under delivery pressure.

What I notice in the job description, and find genuinely interesting, is the mob-session model and the active investment in AI-assisted SDLC. I use Claude Code, GitHub Copilot, GPT, and Lovable daily for story refinement, edge-case generation, and rapid prototyping. At construct8 I am currently owning production code end-to-end without writing it: requirements become prototypes in a day, prototypes become scoped stories, stories drive AI-assisted implementation. Bringing that working mode into Corpay's delivery cycle, especially for a team already building with these tools, is a straightforward fit rather than a learning curve.

On domain: I do not have years of AP Automation or Commercial Card experience as an employee. What I do have is direct product ownership of payment flows at Scheidt & Bachmann, a founder track that includes Kvitt, a mobile P2P payments product acquired by Sparkasse, and ten-plus years of owning regulated, integration-heavy B2B SaaS backlogs. The mechanics of payment authorization, reconciliation edge cases, and enterprise finance workflow are familiar territory; the Corpay-specific vocabulary I will close in the first two weeks.

I work remote and would be available within four weeks of an offer. I would welcome a conversation about the team's current delivery challenges and what good looks like for the first quarter.

Best regards, *Philipp Hilbert*
