

Philipp Hilbert. *Crypto-native product leader who turns payment infrastructure into shipped results.*

Positioning, ten years shipping regulated fintech and B2B SaaS products, now bringing that execution discipline to stablecoin payments and on/off-ramp infrastructure.

§ WHY UTORG

Utorch sits at the exact intersection I have been moving toward: regulated payment rails, self-custodial wallets, and the infrastructure that makes crypto usable at scale rather than aspirational. The job description asks for someone who can hold the full context, business goals, user needs, regulatory constraints, across 2,100+ B2B integrations while keeping delivery on track; that is precisely the operating mode I have refined across seven years of cross-functional PM work in regulated environments. What I find specifically compelling is MiCA authorization across the EEA: compliance is not a checkbox here but a product constraint that shapes every roadmap decision, and I have shipped inside similar governance cycles at Bundesdruckerei and Bundesagentur für Arbeit. *That is exactly the kind of pressure-tested environment where structured discovery and disciplined backlog ownership compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, day-to-day coding assistance
- **Lovable**, rapid full-stack prototyping
- **Framer**, design-heavy flows and clickable prototypes

- **Gamma.app**, structured stakeholder communication
 - **GPT**, requirement drafting and edge-case generation
 - **n8n**, multi-agent and agentic workflow automation
 - **Cursor / VSCode**, LLM-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Production work spans WhatsApp and Telegram messaging APIs and LLM agent pipelines (construct8), Kafka, Kotlin, and Python for multimodal data standardization (Rohde & Schwarz), Dagster and dbt for ETL orchestration and big-data migration (Bundesagentur für Arbeit), Kubernetes, OpenShift, ArgoCD, Jenkins, and GitOps rollout pipelines (multiple roles), PostgreSQL, MongoDB, and REST APIs, CGM/KIS clinical interfaces (CLINET), Shopware e-commerce platform migration (AOK ITSCare), and POS/forecourt payment integration (Scheidt & Bachmann).

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal infrastructure project building a systematic backtesting and strategy-validation engine for crypto markets.

- Ingests tick and OHLCV data from centralized and decentralized venues including Hyperliquid and Bitget.
 - Built on a file-queue-based agent loop architecture with Python at the core.
 - Integrates liquidation heatmap data from Coinglass and Hyblock Capital for market-microstructure analysis.
 - Demonstrates the hands-on infrastructure depth Utorg needs from a PO who can write real acceptance criteria for on/off-ramp and execution-quality features.
-

§ HOW I WOULD WORK AT UTORG

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the B2B integration team, map the existing on/off-ramp user flows end-to-end, and identify where context gets lost between strategy and delivery by reading open tickets alongside the high-level product map.

WEEK 2

Audit and sharpen.

Take the three most ambiguous backlog items, rewrite them with measurable acceptance criteria and explicit regulatory constraints, and walk engineering and compliance through them to surface hidden blockers before a sprint starts.

WEEK 3+

Ship and close loops.

Own the first initiative from requirements sign-off through release, define the success metric before build, and report outcome versus forecast to the exec team in a structured one-pager.

I COVER LETTER

Dear Utorg team,

Stablecoin payments are not an abstraction for me. I actively trade and manage assets across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, work daily with perpetual futures and cross-chain bridges, and spend meaningful time analyzing execution quality, slippage, and market microstructure. When your job description says "you know how these products work and what constraints they live with," I can answer that with eight years of hands-on crypto experience and a personal backtesting engine I am currently building in Python.

The execution side matches just as well. At Rohde & Schwarz I owned a defence AI platform where a single missed regulatory requirement could kill a procurement cycle. I reduced rollout time from days to thirty minutes, steered the product away from a UI-heavy direction that was losing the target audience, and kept a cross-functional team across engineering, data science, QA, and legal aligned on one backlog. At Bundesdruckerei I owned two RKI projects, vaccination statistics and viral-mutation tracking, where identity management, privacy governance, and a compressed timeline left zero room for scope creep. Both experiences taught me the same discipline your mission statement describes: hold the "why" in one hand and the delivery plan in the other, and never let either slip.

At EMIL Group I inherited a seventeen-person team that was moving slowly because it was too large and too homogeneous. I split it into three focused squads with explicit ownership

boundaries, launched the Claims Center, and left behind a structure that could actually sustain velocity. The PO role at Utorg asks for someone who can "prioritize ruthlessly and cut what doesn't matter", that restructuring was that decision, made with data and defended clearly to leadership.

The B2B side of your business, 2,100+ platforms, \$2.4B moved, is a scale of integration complexity I recognize from Scheidt & Bachmann, where POS, payment, and forecourt systems had to stay synchronized across a large SAFe release train. I know what it costs when a B2B integration partner gets a broken API contract, and I know how to write requirements that prevent it.

I am fully remote-ready, available within four weeks, and genuinely excited to work at a MiCA-authorized infrastructure company that treats compliance as a design constraint rather than an afterthought.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years shipping regulated software products across defence, public sector, insurtech, and payments. Now focused on crypto and fintech infrastructure: on/off-ramps, wallet UX, and the B2B rails that make digital asset payments production-grade. I hold context across business, engineering, legal, and compliance without losing it in translation, and I define success metrics before the first sprint starts so there is something real to report afterward.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation, backlog and release ownership, SAFe (PI planning, release trains), metric definition before build.

Payment and crypto infrastructure. On/off-ramp flows, POS and forecourt payment integration, P2P and consumer payment UX, PSP edge-case handling, CEX/DEX mechanics, AMMs, perpetuals, bridges.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, analytics platforms. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

AI-first building. Claude Code, GitHub Copilot, Lovable, Framer, n8n agent workflows; own production code without writing it.

Regulated environments. Defence, public sector, health data, insurance: identity management, highest privacy requirements, audit and governance cycles, MiCA-adjacent compliance reasoning.

Working tools: Jira, Confluence.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build; AI-assisted operations with WhatsApp/Telegram APIs and LLM agent pipelines.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI data into one homogeneous training standard; rollout compressed from days to 30 min, fully hotfix-capable; product steered from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration, UI relaunch, big ETL migration. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Claims Center launched; 17-person team restructured into three focused squads with explicit ownership.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics, viral-mutation tracking; identity management, highest privacy.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION
2020 TO 2021

POS, payment, and forecourt systems; SAFe: PI planning, release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019
TO 2020

Full legacy webshop migration to Shopware for ~20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (quantum encryption, Product Owner) ·
Smart Soil Technologies (nanotech)
