

Philipp Hilbert. *Crypto-native product leader who turns payment infrastructure into shipped results.*

Positioning, ten years shipping regulated fintech and B2B SaaS products, now bringing that execution discipline to stablecoin payments and on/off-ramp infrastructure.

Dear Utorg team,

Stablecoin payments are not an abstraction for me. I actively trade and manage assets across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, work daily with perpetual futures and cross-chain bridges, and spend meaningful time analyzing execution quality, slippage, and market microstructure. When your job description says "you know how these products work and what constraints they live with," I can answer that with eight years of hands-on crypto experience and a personal backtesting engine I am currently building in Python.

The execution side matches just as well. At Rohde & Schwarz I owned a defence AI platform where a single missed regulatory requirement could kill a procurement cycle. I reduced rollout time from days to thirty minutes, steered the product away from a UI-heavy direction that was losing the target audience, and kept a cross-functional team across engineering, data science, QA, and legal aligned on one backlog. At Bundesdruckerei I owned two RKI projects, vaccination statistics and viral-mutation tracking, where identity management, privacy governance, and a compressed timeline left zero room for scope creep. Both experiences taught me the same discipline your mission statement describes: hold the "why" in one hand and the delivery plan in the other, and never let either slip.

At EMIL Group I inherited a seventeen-person team that was moving slowly because it was too large and too homogeneous. I split it into three focused squads with explicit ownership boundaries, launched the Claims Center, and left behind a structure that could actually sustain velocity. The PO role at Utorg asks for someone who can "prioritize ruthlessly and cut what doesn't matter", that restructuring was that decision, made with data and defended clearly to leadership.

The B2B side of your business, 2,100+ platforms, \$2.4B moved, is a scale of integration complexity I recognize from Scheidt & Bachmann, where POS, payment, and forecourt systems had to stay synchronized across a large SAFe release train. I know what it costs when a B2B integration partner gets a broken API contract, and I know how to write requirements that prevent it.

I am fully remote-ready, available within four weeks, and genuinely excited to work at a MiCA-authorized infrastructure company that treats compliance as a design constraint rather than an afterthought.

Best regards, *Philipp Hilbert*
