

Philipp Hilbert. *Crypto-native product owner, execution-first.*

Positioning, ten years shipping regulated fintech and platform products, now applying that discipline to crypto wallets, on/off-ramps, and digital-asset infrastructure.

§ WHY JOBGATHER'S PARTNER

The role sits exactly where payments infrastructure, compliance constraints, and crypto-native users collide, the same intersection I find genuinely interesting rather than incidentally relevant. The job description calls out wallets, on/off-ramps, crypto cards, and trading as the product surface; these are systems I actively use and have been analyzing at the microstructure level for years. The explicit emphasis on writing clear requirements and acceptance criteria for engineering teams, while serving as the single point of reference on scope and trade-offs, maps precisely to how I have operated across every engagement listed on my CV. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo specification and edge-case generation
- **GitHub Copilot**, assisted implementation review
- **Lovable**, rapid clickable prototypes from user flows
- **Framer**, design-heavy interface validation
- **GPT**, stakeholder-facing copy and requirements drafting
- **n8n**, agentic workflow orchestration
- **Cursor / VSCode**, codebase navigation and ownership
- **Gamma.app**, structured stakeholder presentations

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kafka, Kotlin, Python, Dagster, dbt, DuckDB, Kubernetes, OpenShift, ArgoCD, Jenkins, GitLab, Azure DevOps, PostgreSQL, MongoDB, REST APIs, WhatsApp and Telegram messaging APIs, Shopware, CGM/KIS clinical interfaces, POS and forecourt payment systems. Analytics tooling: Jira, Confluence, business intelligence dashboards. Crypto execution venues and analytics: Hyperliquid, Bitget, Jupiter, 1inch, Across Protocol, Coinglass, Hyblock Capital.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal backtesting and algorithmic-decision framework built to understand execution quality in digital-asset markets.

- Ingests historical order book and trade data across CEX and DEX venues to model slippage, price impact, and routing quality.
 - Designed around a file-queue-based agent loop, applying the same multi-agent orchestration pattern used in professional product contexts.
 - Informs live trading across perpetuals and spot on Hyperliquid, Bitget, and Jupiter.
 - Directly relevant: the ability to reason from market microstructure data into product requirements for on/off-ramps and execution infrastructure.
-

§ HOW I WOULD WORK AT THE PARTNER COMPANY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview engineering leads, compliance, and customer-facing teams to map the current wallet, on/off-ramp, and card flows against actual user journeys, then identify the three highest-uncertainty items in the existing backlog.

WEEK 2

Sharpen and slice.

Rewrite the top backlog items as outcome-based epics with measurable acceptance criteria, removing scope that cannot be traced to a business or user objective.

Ship and close loops.

Drive the first sprint-review cycle, validate delivered features against original acceptance criteria, and publish a structured stakeholder update on progress, open risks, and next decisions.

I COVER LETTER

Dear Hiring Team,

I am applying for the Product Owner role in the fintech and digital-assets space listed through Jobgether. My background spans ten years of product ownership across regulated, technically complex environments, defence AI platforms, national health data infrastructure, InsurTech SaaS, and B2B payment systems, and I have spent the past eight years engaging deeply with crypto markets as both a sophisticated user and an infrastructure-oriented analyst.

The job description is specific about domain expectations: wallets, on/off-ramps, crypto cards, and trading. I meet that bar practically. I actively manage assets across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, using perpetuals, spot, DEX aggregation, and cross-chain bridging. I study execution concepts, slippage, price impact, routing, liquidation mechanics, using platforms like Coinglass and Hyblock Capital. I have built a personal backtesting engine to model these dynamics algorithmically. This is not peripheral interest; it is the kind of user-research depth that lets a product owner write requirements that hold up under engineering scrutiny and compliance review simultaneously.

On the execution side, the accountability list in the posting describes what I do day-to-day: translate strategy into epics and acceptance criteria, own and continuously challenge the backlog, monitor timelines, identify blockers early, and serve as the authoritative reference point on scope and trade-offs. At Rohde & Schwarz I steered a multimodal AI data platform from a UI-heavy architecture to a developer-code-friendly one, cutting rollout time from days to thirty minutes and making the system fully hotfix-capable, that required writing sharp requirements, aligning engineering and compliance, and being willing to challenge the existing roadmap based on evidence. At EMIL Group I inherited a seventeen-person team that was moving slowly and restructured it into three focused teams with clear leads; velocity recovered and the Claims Center shipped. At Scheidt & Bachmann I owned payment and forecourt system integration under SAFe discipline, managing PI planning and release trains across a large cross-functional organization.

The regulatory dimension of this role, compliance, KYC, AML, and the operational constraints of digital-asset licensing, is territory I have navigated before. At Bundesdruckerei I owned national health data infrastructure for the RKI with identity management requirements and the highest privacy standards. At Bundesagentur für Arbeit I ran a public-facing analytics platform

through a bare-metal-to-container migration while maintaining data governance commitments. Regulated environments require a different kind of rigor in requirements and acceptance criteria; I am accustomed to writing documentation that satisfies both engineers and auditors.

I would welcome the opportunity to discuss the role and the product surface in more detail. I am available on four weeks' notice and happy to work fully remote or to relocate to the UAE.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years owning complex software products across defence, public sector, InsurTech, and B2B SaaS, with eight years of hands-on crypto engagement covering wallets, DEX aggregation, perpetuums, cross-chain infrastructure, and market microstructure. Brings the rigor of regulated-environment product ownership, sharp requirements, measurable acceptance criteria, structured stakeholder communication, into a domain where most product owners lack genuine technical depth. Operates AI-first: prototypes ship in a day, ownership of production code without writing it, agent frameworks under own guardrails.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale (PI planning, release trains), metric definition before build.

Integration and platforms. Payment and forecourt systems, clinical interfaces (CGM/KIS), e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram), crypto execution venues (CEX/DEX), on/off-ramp and wallet product patterns.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, analytics platforms for public use. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

AI-first building. Claude Code, GitHub Copilot, Lovable for full prototyping, agent frameworks under own guardrails, n8n workflow orchestration.

Regulated environments. Defence, public sector, health data, insurance: identity management, highest privacy requirements, audit and governance cycles.

Working tools: Jira, Confluence.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build, AI-assisted operations; WhatsApp/Telegram APIs and LLM agents powering the core workflow.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI data unified into one training standard; rollout cut from days to 30 min, fully hotfix-capable; product steered from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration and big ETL migration delivered. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Insurers launch products in days, not months; Claims Center shipped; 17-person team restructured into three nimble teams with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics, viral-mutation tracking; identity management at highest privacy standard.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAFe: PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Full legacy webshop migration to Shopware for approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (quantum-encryption, PO) · Smart Soil Technologies (nanotech)
