

Philipp Hilbert. *Crypto-native product owner, execution-first.*

Positioning, ten years shipping regulated fintech and platform products, now applying that discipline to crypto wallets, on/off-ramps, and digital-asset infrastructure.

Dear Hiring Team,

I am applying for the Product Owner role in the fintech and digital-assets space listed through Jobgether. My background spans ten years of product ownership across regulated, technically complex environments, defence AI platforms, national health data infrastructure, InsurTech SaaS, and B2B payment systems, and I have spent the past eight years engaging deeply with crypto markets as both a sophisticated user and an infrastructure-oriented analyst.

The job description is specific about domain expectations: wallets, on/off-ramps, crypto cards, and trading. I meet that bar practically. I actively manage assets across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, using perpetuals, spot, DEX aggregation, and cross-chain bridging. I study execution concepts, slippage, price impact, routing, liquidation mechanics, using platforms like Coinglass and Hyblock Capital. I have built a personal backtesting engine to model these dynamics algorithmically. This is not peripheral interest; it is the kind of user-research depth that lets a product owner write requirements that hold up under engineering scrutiny and compliance review simultaneously.

On the execution side, the accountability list in the posting describes what I do day-to-day: translate strategy into epics and acceptance criteria, own and continuously challenge the backlog, monitor timelines, identify blockers early, and serve as the authoritative reference point on scope and trade-offs. At Rohde & Schwarz I steered a multimodal AI data platform from a UI-heavy architecture to a developer-code-friendly one, cutting rollout time from days to thirty minutes and making the system fully hotfix-capable, that required writing sharp requirements, aligning engineering and compliance, and being willing to challenge the existing roadmap based on evidence. At EMIL Group I inherited a seventeen-person team that was moving slowly and restructured it into three focused teams with clear leads; velocity recovered and the Claims Center shipped. At Scheidt & Bachmann I owned payment and forecourt system integration under SAFe discipline, managing PI planning and release trains across a large cross-functional organization.

The regulatory dimension of this role, compliance, KYC, AML, and the operational constraints of digital-asset licensing, is territory I have navigated before. At Bundesdruckerei I owned national health data infrastructure for the RKI with identity management requirements and the highest privacy standards. At Bundesagentur für Arbeit I ran a public-facing analytics platform through a bare-metal-to-container migration while maintaining data governance commitments. Regulated environments require a different kind of rigor in requirements and acceptance criteria; I am accustomed to writing documentation that satisfies both engineers and auditors.

I would welcome the opportunity to discuss the role and the product surface in more detail. I am available on four weeks' notice and happy to work fully remote or to relocate to the UAE.

Best regards, *Philipp Hilbert*
