

Philipp Hilbert. *Platform PM with a fraud and infrastructure edge.*

Positioning, Ten years shipping regulated financial and defence platforms; built for the cross-functional depth Kraken's fraud team needs. ≤ 25 words.

§ WHY KRAKEN

Kraken is one of the few crypto venues that has operated at institutional scale long enough to have real fraud complexity, ATO patterns, multi-jurisdictional case management, and the perpetual tension between friction and user protection are not theoretical here. The job description's call for revamping case management for fraud and ATO is exactly the kind of zero-to-one operational infrastructure problem I have spent the last three years solving. Pairing that with external vendor integrations and cross-functional alignment across Legal, Risk, and Engineering maps directly onto how I work. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not held a title that reads "Fraud PM" and I do not have direct experience owning AML or ATO detection models. What I do have is a sustained record of owning the operational systems that sit around detection: case routing, audit trails, stakeholder alignment across compliance and legal, and the API integration plumbing that connects third-party risk vendors to internal workflows, the transferable mechanic is the same.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation

- **GitHub Copilot**, day-to-day coding assistance
 - **Lovable**, rapid clickable prototypes
 - **GPT**, edge-case and requirements brainstorming
 - **Cursor / VSCode**, development environment
 - **Gamma.app**, stakeholder decks built fast
 - **n8n**, multi-agent and workflow automation
 - **Framer**, design-heavy prototyping
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kafka, Kotlin, Python, Dagster, dbt, DuckDB, Kubernetes, OpenShift, ArgoCD, Helm, Jenkins, GitOps, Docker, PostgreSQL, MongoDB, REST APIs, WhatsApp and Telegram messaging APIs, Shopware, Azure DevOps, Jira, Confluence.

§ SIDE PROJECT

HILBERTP / DEV-AGENT-FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HILBERTP) →

A file-queue-based agentic loop for autonomous crypto research and execution tasks.

- Orchestrates multi-step LLM agents across trading research, backtesting, and market-microstructure analysis.
 - Architecture: file-queue task dispatch, guardrailed agent steps, structured output validation.
 - Built to support personal trading on Hyperliquid, Bitget, Jupiter, and 1inch, real execution context, not toy data.
 - Demonstrates the agent-loop fluency directly applicable to Kraken's interest in AI-assisted case management automation.
-

§ HOW I WOULD WORK AT KRAKEN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the fraud ops and engineering teams, map the current ATO and case management workflow end-to-end, and identify the three highest-friction handoffs, specifically where the revamp project is losing time or accuracy.

WEEK 2

Slice, validate, prioritise.

Draft a structured problem statement for the case management revamp, propose a first thin vertical slice with engineering, and validate it against at least one real fraud analyst workflow before committing to sprint.

WEEK 3+

Ship, measure, close.

Own delivery of the first case management milestone: define success metrics before build, run the stakeholder review across Legal and Risk, and set up the feedback loop that makes the next sprint faster.

I COVER LETTER

Dear Hiring Team,

I am applying for the Product Manager II, Fraud role at Kraken. My background is in building regulated operational infrastructure, defence AI platforms, national health data systems, payment and forecourt integrations, and I have spent the last several years working on exactly the cross-functional coordination problems this role describes: translating complex technical systems into clear product requirements, aligning engineering with legal and compliance, and managing third-party vendor integrations end to end.

The specific project that draws me to this role is the case management revamp for fraud and ATO. At Rohde & Schwarz I owned a comparable restructuring: a multimodal AI data pipeline that arrived in a fragmented, UI-heavy state and needed to be rebuilt into a developer-friendly, hotfix-capable platform. I drove that from discovery through rollout, reducing deployment time from days to 30 minutes. The operational pattern, mapping the current workflow, finding the friction, slicing a delivery sequence, and keeping Legal and engineering aligned throughout, is the same one I would bring to Kraken's fraud case management.

At EMIL Group I restructured a 17-person monolithic team into three domain-led squads with their own leads because the previous structure was producing output, not outcomes. Cross-functional discipline was the mechanism: clear ownership boundaries, metrics defined before

build, and a Claims Center launch that came out of that restructured team as the first proof point. At Bundesdruckerei I owned the RKI's vaccination statistics and viral-mutation tracking systems under the highest identity and privacy constraints, a regulated, multi-stakeholder environment not structurally different from Kraken's jurisdictional compliance requirements.

My crypto engagement goes beyond domain literacy. I actively trade on Hyperliquid, Bitget, Jupiter, and 1inch, I have studied market microstructure, liquidation dynamics, and execution quality across CEX and DEX venues for years, and I have built my own agent framework for research and trading automation. I understand the difference between a legitimate power user and a suspicious one, and why that distinction is the hardest thing to encode in a fraud system that cannot afford false positives.

I would welcome the opportunity to walk through the case management problem in more detail and show how I would approach the first discovery sprint.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years of product ownership across regulated infrastructure, defence, public sector, health data, payments, with a consistent focus on cross-functional delivery and operational precision. I have restructured teams, owned API-based vendor integrations, and driven platform migrations in environments where compliance, legal, and engineering need to agree before anything ships. Crypto has been a parallel track since 2018: active trading, infrastructure analysis, and agent tooling I have built and use daily.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale, metric definition before build.

Regulated environments. Defence, public sector, health data and insurance: identity management, audit and governance cycles, multi-jurisdictional compliance.

Integration and platforms. Payment and forecourt systems, clinical interfaces, e-commerce platforms, messaging APIs, API-based third-party vendor integrations.

Data and AI platforms. ETL orchestration and migration, analytics platforms, LLM agents, multimodal AI training pipelines. Kafka, Python, Kotlin, Dagster, dbt.

Cloud and delivery. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, ArgoCD, Jenkins, Git.

AI-first building. Claude Code, GitHub Copilot, Lovable, n8n agent frameworks, Framer.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one AI-assisted operations platform; WhatsApp/Telegram API integrations, LLM agent workflows.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI data unified to one training standard; deployment reduced from days to 30 minutes, fully hotfix-capable; product repositioned from UI-heavy to developer-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; drove bare-metal-to-container migration and big ETL migration. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Insurers launch insurance products in days, not months; Claims Center launched; 17-person team split into three focused squads with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android app; integrated the CGM/KIS clinical interface myself.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking under highest privacy and identity management requirements.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAFe PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019
TO 2020

Full migration of legacy webshop to modern Shopware application for ~20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (quantum-resistant encryption, Deputy IT Security Officer) · Smart Soil Technologies (nanotech)
