

Philipp Hilbert. *AI-native product leader who ships.*

Positioning, 10+ years turning ambiguous enterprise briefs into delivered AI products, with the stakeholder fluency and technical depth UAE clients expect.

§ WHY HALIAN / THIS ORGANIZATION

The posting describes exactly the gap many government and enterprise clients in the Gulf face right now: credible AI ambition but no one inside who can bridge the whiteboard and the backlog. What makes this role specific is the explicit call for someone who can run client workshops, shape AI-native experiences, and hold vendors accountable across the full delivery lifecycle simultaneously. That combination is precisely where I have spent the last three years, most recently doing all three in parallel at Rohde & Schwarz on a defence AI platform and at construct8 as a zero-to-one build. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo feature delivery and spec generation
- **GitHub Copilot**, pair-programming across the product lifecycle
- **Lovable**, full front-end prototyping without a designer present
- **Framer**, design-heavy interactive mockups for client workshops
- **n8n**, multi-agent and agentic workflow design
- **Gamma.app**, rapid executive-ready presentation builds
- **GPT**, requirement drafting, edge-case expansion, user-story generation
- **Cursor / VSCode**, hands-on review and guardrail work inside agent frameworks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin, Python, Kafka, Dagster, dbt, DuckDB, PostgreSQL, MongoDB, REST APIs, Kubernetes, OpenShift, ArgoCD, Helm, Jenkins, GitOps, Docker, Shopware, WhatsApp/Telegram Messaging APIs, CGM/KIS clinical interfaces, Azure DevOps, GitLab, Jira, Confluence.

§ SIDE PROJECT

DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A self-built orchestration layer for crypto-market agents and backtesting pipelines.

- Runs file-queue-based agent loops to automate trading signal generation and backtest execution across Hyperliquid and Jupiter venues.
 - Built on a Python core with n8n orchestration and Replit for rapid iteration, with clear guardrail boundaries between owned logic and LLM-generated code.
 - Integrates live market-microstructure data from Coinglass and Hyblock Capital for liquidation heatmap analysis and execution quality review.
 - Demonstrates exactly the agentic-product thinking this role requires: scoping where AI creates value, defining success criteria, and owning the output without writing every line.
-

§ HOW I WOULD WORK AT THIS ORGANIZATION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow active client engagements and workshop sessions to map the real decision-making structure, identify which stakeholders own business outcomes versus technical delivery, and locate the largest unresolved risk on each live product.

WEEK 2

Sharpen the backlog.

Pick the one initiative with the most ambiguity and run a focused discovery sprint: a PRD draft, a Lovable prototype, and a prioritised list of the open questions that would kill it if left unanswered.

Ship, verify, repeat.

Own the first structured demo to a client or government stakeholder, close the feedback loop into the backlog, and establish the review cadence that keeps delivery and business reality in sync.

I COVER LETTER

To the hiring team,

You are looking for a product manager who can take an enterprise or government client's vague AI ambition and turn it into something delivered. That is not a role for someone who has studied AI product management; it is a role for someone who has done it in high-stakes environments where the cost of getting the scope wrong is measured in months, not sprints. That is the work I have been doing for the past decade.

At Rohde & Schwarz, I owned the product for a defence AI data platform feeding the FCAS programme. The core challenge was identical to what your clients face: multiple engineering teams, a legacy pipeline that nobody trusted, stakeholders at varying levels of technical literacy, and an expectation that AI would somehow make it all better without anyone being able to define better. I resolved that by making discovery continuous, running structured workshops to surface the real constraints, and negotiating outcome-based requirements with the engineering lead rather than handing over a decree. The result: rollout time dropped from days to 30 minutes, the platform became fully hotfix-capable, and the product shifted from UI-heavy to developer-friendly in a way the client had not anticipated but immediately valued.

At construct8, I operate in a zero-to-one context, using LLM agents and messaging APIs (WhatsApp, Telegram) to automate construction-marketplace workflows that previously required manual operations. I prototype disputed flows as clickable products in a day using Lovable and Framer, run the resulting demos with end users, and feed the findings back into the backlog the same week. That cycle, prototype → validate → ship → measure, is what your job description calls an AI-native mindset, and it is now my default working mode.

The UAE market adds one dimension I am actively interested in: government-scale digital transformation with short delivery windows and high executive visibility. My background at Bundesdruckerei (national health data infrastructure, RKI) and Bundesagentur für Arbeit (public analytics platform for a country of 84 million) gave me direct experience navigating public-sector governance and communicating product strategy to audiences who care about outcomes, not architecture. I am ready to bring that experience to the Gulf context and I am willing to relocate to Abu Dhabi.

I recognise that my CV does not show a smart-cities or IoT product title. What I do bring is the underlying mechanics: sensor-to-dashboard data pipelines, enterprise integration across heterogeneous systems, and the stakeholder-management pattern that makes public-sector digital products actually get used rather than merely get launched. I am a fast domain learner and I have the reference points to ramp quickly.

I would welcome a conversation about the specific client contexts and delivery challenges your team is navigating.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product leader with 10+ years of experience delivering B2B enterprise and public-sector digital products. He works at the intersection of AI, data platforms, and complex stakeholder environments, with a track record spanning defence AI, public analytics, insurtech, health data, and payments. His working mode is AI-first: prototypes over decrees, outcome metrics before build, and continuous discovery as a permanent operating state rather than a project phase. He is relocating to Abu Dhabi and is open to full on-site engagement.

§ WHAT I CAN DO

AI-first building. Claude Code, GitHub Copilot, Lovable, Framer, n8n, GPT, Cursor; agent frameworks under own guardrails; prototype to validated product in days.

Product craft. Continuous discovery, prototype-led validation, outcome negotiation, backlog and release ownership, SAFe (PI planning, release trains), metric definition before build.

Data and AI platforms. Multimodal AI training pipelines, ETL orchestration, analytics platforms for public use. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud, delivery and operations. Bare-metal to container migration, GitOps rollout and hotfix pipelines. Kubernetes, OpenShift, ArgoCD, Jenkins, GitLab, Azure DevOps.

Integration and platforms. Clinical interfaces (CGM/KIS), payment and forecourt systems, e-commerce (Shopware), messaging APIs (WhatsApp, Telegram).

Regulated environments. Defence, public sector, health data, insurance: identity management, audit cycles, highest privacy requirements.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build; LLM agents and WhatsApp/Telegram APIs automate previously manual marketplace operations; AI-assisted prototyping drives every discovery cycle.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI training data unified to one homogeneous standard; rollout time reduced from days to 30 minutes, fully hotfix-capable; product repositioned from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, trend-sharp, and social-media-ready; bare-metal-to-container migration and full UI relaunch delivered. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Claims Center launched; 17-person monolithic team restructured into three autonomous teams with leads, unlocking delivery velocity.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface directly.

BUNESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking at national scale; identity management, highest privacy standards.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAFe delivery across PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Legacy webshop fully migrated to modern Shopware application serving approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, cabling, and software stack.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (encryption, Product Owner for backup, restore, and data-encryption architecture) · Smart Soil Technologies (nanotech)
