

Philipp Hilbert. *Experienced SaaS product leader with deep AI and platform delivery credentials.*

Positioning, ten years shipping B2B SaaS products across regulated industries, now bringing AI-native execution and GenAI platform experience to strategic HR software.

§ WHY MÉTIER - STRATEGIC HR SOLUTIONS

Strategic HR is a domain where the gap between what AI can do and what practitioners actually experience in their tools is still very wide, and closing that gap for users is exactly the kind of product problem worth owning end-to-end. The job description is honest about the full scope: roadmap, PRDs, trade-offs between latency and cost, post-release monitoring, and compliance. That is not a partial product role; that is the whole thing. The reference to RAG pipelines, vector databases, and LLM orchestration as an advantage signals a team that has already moved past surface-level GenAI integration and is making real architectural choices. *That is exactly the environment where careful trade-off discipline and AI-native tooling make a measurable difference.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, continuous development assist
- **Lovable**, rapid full-stack prototyping
- **Framer**, design-heavy wireframes and clickable prototypes
- **GPT**, research, edge-case generation, PRD drafts

- **n8n**, multi-agent workflow orchestration
 - **Gamma.app**, stakeholder presentation and discovery summaries
 - **Claude**, structured requirements and acceptance criteria
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kafka, Kotlin, Python, Dagster, dbt, DuckDB, Kubernetes, OpenShift, ArgoCD, Helm, Jenkins, GitLab, Azure DevOps, LLM agents, REST APIs, PostgreSQL, MongoDB, Shopware, WhatsApp/Telegram messaging APIs, CGM/KIS clinical interfaces, GitOps pipelines, Docker, Red Hat.

§ SIDE PROJECT

HILBERTP [GITHUB.COM/HILBERTP](https://github.com/HILBERTP) →

Personal agent and crypto infrastructure lab.

- Builds an autonomous dev-agent framework and a backtest engine for crypto markets.
 - File-queue-based agent loop architecture; Python core with LLM orchestration.
 - Active trading and analytics across Hyperliquid, Jupiter, 1inch, and Across Protocol.
 - Demonstrates the hands-on AI orchestration and data-pipeline ownership directly relevant to RAG and LLM integration work in this role.
-

§ HOW I WOULD WORK AT MÉTIER - STRATEGIC HR SOLUTIONS

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow customer success calls and review existing PRDs to map where AI model outputs touch end-user workflows, identify the trade-offs already made between accuracy, latency, and cost, and locate the first measurable gap between intended and actual model behaviour in production.

WEEK 2

Slice and validate.

Pick the single highest-uncertainty item from the roadmap, write a testable hypothesis with acceptance criteria, and run a structured session with engineering and data science to surface feasibility risks before any sprint commitment is made.

WEEK 3+

Ship and close loops.

Own the first feature through release, instrument post-launch monitoring, and present adoption and model-performance metrics back to stakeholders as the baseline for the next roadmap decision.

I COVER LETTER

Dear hiring team at métier - Strategic HR Solutions,

HR software is a domain I have observed closely: the workflows are operationally dense, compliance requirements are non-negotiable, and the gap between what an AI model can do in a demo and what it reliably does in a production system used by HR practitioners under time pressure is often brutally wide. Closing that gap is a product problem, not an engineering problem, and it is exactly the kind of problem I have spent ten years learning to solve.

At Rohde & Schwarz I owned the AI data platform for the FCAS defence programme, where the core challenge was making multimodal AI training data interoperable across incompatible source systems and getting it into a single homogeneous standard the data science team could actually use. I reduced rollout time from days to thirty minutes, made the pipeline fully hotfix-capable, and steered the product from a UI-heavy interface toward a developer-friendly API surface, a trade-off that required sustained negotiation with stakeholders who had invested in the original direction. That is the same trade-off muscle this role asks for: model accuracy versus latency, user experience versus cost, compliance versus feature velocity.

At the Bundesagentur für Arbeit I managed a public analytics platform migration, bare metal to container, ETL relaunch with Dagster and dbt, and a UI relaunch, while keeping a live public service running. Compliance, privacy, and zero-downtime delivery are not abstract concerns for me; they are the constraints I have shipped inside. At EMIL Group I took a seventeen-person team that was moving too slowly and restructured it into three nimble squads with leads, which is how the Claims Center shipped. Structural and operational repair is something I do as a product function, not as a side effect.

On the GenAI side, I work AI-natively every day: Claude Code for in-repo work and requirements, Lovable for rapid prototyping that produces something stakeholders can react to in hours, n8n for agent workflow orchestration, and a personal project building an autonomous agent framework and backtest engine. I understand RAG pipeline architecture, vector database trade-offs, and LLM orchestration at a level that lets me have substantive conversations with engineers about implementation choices rather than simply accepting their first proposal.

I would welcome a conversation about where the AI roadmap is right now and what the largest open uncertainty is. I am available on four weeks' notice.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a Berlin-based product leader with ten-plus years of experience shipping B2B SaaS products across regulated industries including defence, public sector, insurance, and health data. He has owned AI and data platform products end-to-end, from discovery and PRD through GitOps rollout and post-release monitoring, and brings hands-on AI-native tooling and working knowledge of LLM integration, ETL orchestration, and cloud delivery into every engagement. His operating mode is outcome-first: he negotiates metrics before scope and treats each product decision as a testable bet.

§ WHAT I CAN DO

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, LLM agents, RAG-adjacent data workflows. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale (PI planning, release trains), metric definition before build.

AI-first building. I own production code without writing it: Claude Code, GitHub Copilot, Lovable for full prototyping, agent frameworks under my own guardrails.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, Red Hat, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

Integration and platforms. Clinical interfaces (CGM/KIS), payment and forecourt systems, e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram).

Regulated environments. Defence, public sector, health data and insurance: identity management, highest privacy requirements, audit and governance cycles.

Working tools: Jira, Confluence.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one AI-assisted operations; LLM agents and WhatsApp/Telegram APIs for workflow automation in a marketplace context.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Unified multimodal AI training data into one homogeneous standard; reduced rollout from days to 30 minutes, fully hotfix-capable; steered product from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration and big ETL relaunch. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Insurers launch products in days, not months; Claims Center launched; 17-person team restructured into three nimble squads with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android app; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking; identity management, highest privacy requirements.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAFe: PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019
TO 2020

Full migration of a legacy webshop to a modern Shopware application for approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, and software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (encryption, quantum-resistant) · Smart Soil Technologies (nanotech)
