

Philipp Hilbert. *Digital checkout specialist with a decade of Agile delivery.*

Positioning, B2B product leader with ten years of Agile delivery, end-to-end checkout and payment product ownership, and a track record of turning ambiguous requirements into shipped features.

§ WHY WESCO

Wesco's scale — over 20,000 people, a Fortune 500 B2B distribution network, and a complex supply chain spanning web, mobile, and emerging commerce channels — is exactly the kind of environment where rigorous backlog management and cross-functional alignment create compounding value. The role sits at the intersection of checkout conversion, payment integration, and fulfilment orchestration, which maps directly to work I have done: owning end-to-end digital flows, integrating third-party systems, and making complex operational workflows legible to both business and engineering teams. The explicit focus on analytics-driven prioritisation of KPIs like cart-to-order conversion and payment authorisation success rate signals a data-serious product culture. *That is exactly the environment where structured thinking and delivery discipline separate good product ownership from great.*

§ HONEST FRAMING

I have not owned a checkout product at a B2B distribution company of Wesco's scale — my e-commerce experience includes a Shopware webshop migration at AOK and a P2P payment product, not a Fortune 500 checkout platform. The transferable mechanic is strong: I have owned complex, multi-stakeholder digital flows with third-party integrations, tight KPI accountability, and cross-functional Agile teams in B2B SaaS environments.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GPT**, edge-case analysis and user story drafting
 - **GitHub Copilot**, development support and acceptance criteria generation
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframing
 - **Gamma.app**, stakeholder presentations
 - **n8n**, workflow and integration automation
 - **Cursor / VSCode**, LLM-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Dagster, dbt, DuckDB, Redpanda, Shopware, Ionic, CGM API integration, MicroStrategy, Git, Bitbucket.

§ SIDE PROJECT

KVITT PAYMENT SOLUTIONS [LINKEDIN.COM/IN/PHILIPP-HILBERT-34032275](https://www.linkedin.com/in/philipp-hilbert-34032275) →

Group-based P2P payment app built from concept to mobile prototype, later acquired and operated by Sparkasse.

- Designed and shipped full UX/UI for group-based P2P payment flows on a P2P backbone.
- Integrated PSP (payment service provider) for transaction processing and settlement.
- Delivered a mobile app prototype covering account creation, group management, and payment execution.
- Direct precedent for Wesco's checkout integration work: PSP selection, payment UX edge cases, and fraud surface awareness were live design constraints throughout.

§ HOW I WOULD WORK AT WESCO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow checkout flows across web and mobile, audit the current backlog, speak with engineers and analytics partners to establish a baseline on conversion KPIs, payment authorisation rates, and the most painful integration seams with payment providers and tax engines.

WEEK 2

Slice and prioritise.

Identify the two or three backlog items with the highest conversion impact and lowest delivery risk, write tight user stories with acceptance criteria, and align with the team on a shared Definition of Done that everyone can hold to.

WEEK 3+

Ship and close loops.

Begin driving sprint ceremonies with discipline, establish a regular cadence of product review with stakeholders, and instrument the first shipped improvements against checkout KPIs to build an evidence base for the next prioritisation round.

I COVER LETTER

Dear Wesco hiring team,

I am applying for the Product Owner, Digital Cart and Checkout role. With ten years of Agile product delivery across B2B SaaS, regulated environments, and complex integrations, I am drawn to the specificity of this mandate: own the checkout experience, drive measurable conversion improvement, and hold the thread across engineering, business, and third-party systems. That is the kind of clearly scoped, high-accountability product ownership I do best.

At Emil Group, I took over a B2B InsurTech platform under significant delivery stress. The team had grown too large to function, sprint discipline had collapsed, and client trust was eroding. I split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt weekly product workshops with clients. Within months, senior developer attrition dropped from near-total to a single departure and we were shipping predictably again. The parallel to Wesco's checkout mandate is direct: managing a complex product backlog, re-

establishing delivery discipline, and representing stakeholder needs clearly to engineering teams is work I have done under pressure.

At Bundesagentur für Arbeit, I owned a public-facing analytics platform where third-party integrations, data quality, and KPI accountability drove every prioritisation decision. I introduced automated ETL with Dagster, drove Kubernetes migration, and served as Deputy IT Security Officer – demonstrating the kind of cross-functional breadth this role requires, from analytics partnerships to infrastructure-level decisions. The checkout KPIs Wesco names – cart-to-order conversion, payment authorisation success rate, checkout completion time – are the same class of outcome-oriented metrics I have used to make backlog calls throughout my career.

Earlier, I co-founded Kvitt Payment Solutions, a group-based P2P payment product that I took from concept through PSP integration, full UX/UI design, and mobile app prototype before it was acquired by Sparkasse. That experience gave me hands-on understanding of payment flows, edge-case handling, authorisation failure modes, and the user experience decisions that separate a frictionless checkout from an abandoned cart. It is directly relevant to Wesco's work with third-party payment providers and fraud detection tools.

I am a fluent English speaker (C2), experienced in SAFe and Scrum environments, comfortable in ambiguity, and oriented toward delivery over process theatre. I would welcome the opportunity to discuss how my background maps to Wesco's checkout roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience delivering complex digital products in B2B SaaS, regulated government, and founder-stage environments. Proven track record of translating multi-stakeholder requirements into clear backlogs, driving Agile team delivery under pressure, and owning integrations with third-party systems across payment, data, and operational workflows. Experienced in analytics-driven prioritisation, sprint discipline, and cross-functional alignment across engineering, business, compliance, and external partners. Comfortable owning the full product lifecycle from discovery through production rollout.

§ CORE STRENGTHS

- Backlog ownership and sprint discipline in Scrum and SAFe environments
- Checkout, payment, and PSP integration product design
- Cross-functional stakeholder alignment across business and engineering
- Analytics-driven KPI prioritisation and conversion optimisation
- Third-party integration management (payment, tax, fulfilment, fraud)
- User story authoring with precise acceptance criteria and Definition of Done
- Delivery recovery in high-pressure, ambiguous environments
- AI-native product execution and rapid prototyping
- Founder-level pragmatism and low-ego ownership

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability across a dysfunctional 17-person Scrum team; split into smaller focused units with clear ownership and deputy structures
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure, restoring predictable shipping cadence
- Designed and delivered a Claims Center module end-to-end: discovery, user stories, acceptance criteria, production rollout
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA across a multinational stakeholder landscape
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD

- Defined and maintained transparent product backlog aligned to programme priorities under shifting government contract requirements
- Unblocked infrastructure-level issues independently; delivered in one week a feature engineers had deferred for over a year

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned analytics platform backlog; prioritised and delivered features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, improving data pipeline reliability and auditability
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Standardised CI/CD with full test integration at build time

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned backlog and delivery for a mobile-first hospital app across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows; managed third-party API constraints and legacy database dependencies
- Built stakeholder trust through transparent communication of technical complexity under tight delivery deadlines

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product from concept through PSP integration, full UX/UI design, and mobile app prototype; later acquired and operated by Sparkasse
- Hands-on ownership of payment flow design, authorisation edge cases, and consumer checkout UX

QCRYPT AG 2016, 2018

Product Owner

- Owned a quantum-secure encryption product (one-time-pad, true random number generator hardware); designed for setup under two minutes with no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security architecture decisions

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policies for B2B purchasing
