---

Dear Wesco hiring team,

I am applying for the Product Owner, Digital Cart and Checkout role. With ten years of Agile product delivery across B2B SaaS, regulated environments, and complex integrations, I am drawn to the specificity of this mandate: own the checkout experience, drive measurable conversion improvement, and hold the thread across engineering, business, and third-party systems. That is the kind of clearly scoped, high-accountability product ownership I do best.

At Emil Group, I took over a B2B InsurTech platform under significant delivery stress. The team had grown too large to function, sprint discipline had collapsed, and client trust was eroding. I split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and rebuilt weekly product workshops with clients. Within months, senior developer attrition dropped from near-total to a single departure and we were shipping predictably again. The parallel to Wesco's checkout mandate is direct: managing a complex product backlog, re-establishing delivery discipline, and representing stakeholder needs clearly to engineering teams is work I have done under pressure.

At Bundesagentur für Arbeit, I owned a public-facing analytics platform where third-party integrations, data quality, and KPI accountability drove every prioritisation decision. I introduced automated ETL with Dagster, drove Kubernetes migration, and served as Deputy IT Security Officer – demonstrating the kind of cross-functional breadth this role requires, from analytics partnerships to infrastructure-level decisions. The checkout KPIs Wesco names – cart-to-order conversion, payment authorisation success rate, checkout completion time – are the same class of outcome-oriented metrics I have used to make backlog calls throughout my career.

Earlier, I co-founded Kvitt Payment Solutions, a group-based P2P payment product that I took from concept through PSP integration, full UX/UI design, and mobile app prototype before it

was acquired by Sparkasse. That experience gave me hands-on understanding of payment flows, edge-case handling, authorisation failure modes, and the user experience decisions that separate a frictionless checkout from an abandoned cart. It is directly relevant to Wesco's work with third-party payment providers and fraud detection tools.

I am a fluent English speaker (C2), experienced in SAFe and Scrum environments, comfortable in ambiguity, and oriented toward delivery over process theatre. I would welcome the opportunity to discuss how my background maps to Wesco's checkout roadmap.

Best regards, *Philipp Hilbert*
