

Philipp Hilbert. *Senior B2B SaaS Product Manager – full lifecycle ownership.*

Positioning, ten years driving complex software products from strategy through sunset in regulated B2B environments, across InsurTech, GovTech, and defence.

I am applying for the Senior Product Manager role at your company – placed through Experis GmbH – because the combination of secure digital communication, electronic signatures, and legally compliant archiving for public-sector clients is a product space I have navigated directly, not adjacent to.

At Rohde & Schwarz I owned a central AI and data management platform inside the European defence programme FCAS. That environment required exactly what your posting describes: translating regulatory constraints and multinational stakeholder requirements into a prioritised roadmap, managing a cross-functional team across architecture, data science, backend, frontend, and QA, and maintaining delivery credibility under high compliance scrutiny. I drove full-lifecycle feature delivery – user stories through GitOps rollout – and unblocked infrastructure problems independently that had been open with the engineering team for over a year.

At Emil Group I took over a B2B InsurTech SaaS platform in a state of delivery crisis. Client trust had eroded, a 17-person team was operating without sprint discipline, and senior developers were leaving. Within weeks I restructured the team into effective Scrum units, reintroduced velocity tracking and structured refinement, and re-established weekly product workshops with clients. I designed and shipped a Claims Center module from concept to production. The product served primary insurers, reinsurers, MGAs, brokers, and underwriters – an enterprise buyer landscape not far from your regulated-industry client base.

Earlier, as co-founding Product Owner at Qcrypt AG, I owned the architecture of a quantum-secure encryption product built on one-time-pad keys and true random number generator hardware. The USP was security at consumer simplicity – full setup under two minutes, no technical knowledge required. I also served as deputy IT security officer. That experience gave me a clear model for how to position a security product to non-technical buyers while keeping the technical substance accurate and defensible.

I cover the full scope this posting names: product strategy and value proposition, roadmap ownership, market and competitive analysis, KPI-based steering, user research and data-driven validation, business case development, and representation of the product to customers and partners. I am technically fluent enough to challenge engineers constructively and to understand what is genuinely complex versus what is organisational friction. I work closely with Product Owners without overstepping into their execution domain.

I am available within four weeks and open to discussing the engagement scope in detail.

Best regards, *Philipp Hilbert*
