

Philipp Hilbert. *Product Manager who ships in feedback loops, not slide decks.*

Positioning, ten years building B2B SaaS end-to-end – from regulated enterprise platforms to AI data systems – for teams that need clarity, not process.

§ WHY ALASCO

Real estate sits at the intersection of capital intensity and operational opacity – exactly where software can create measurable, lasting value rather than incremental convenience. The framing in the job description – "large budgets, many stakeholders, and decisions that matter long before a building is finished" – matches the complexity class I have spent a decade working in: regulated environments, incomplete information, and stakeholders who will only trust the product if it earns that trust one workflow at a time. The explicit invitation to identify where AI removes manual work rather than adding surface area is the kind of product mandate that attracts careful thinking, not hype. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not shipped product in real estate or construction software directly. The domain is new to me. What is not new is the underlying pattern: high-stakes, multi-stakeholder financial decisions governed by external compliance constraints, where data integrity and auditability are non-negotiable and where wrong prioritisation is expensive – the same pattern I navigated in public labour market analytics, InsurTech, and defence AI platforms.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GPT**, research, synthesis, and edge-case generation
 - **GitHub Copilot**, code review and implementation support
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy prototype work
 - **Gamma.app**, stakeholder communication and decks
 - **n8n**, agentic workflow design and automation
 - **Cursor / VSCode**, day-to-day development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, Django, AngularJS, REST APIs, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, Redpanda, MicroStrategy, CGM API integration.

§ SIDE PROJECT

HILBERTP [GITHUB.COM/HILBERTP](https://github.com/HILBERTP) →

Personal dev agent framework and crypto backtesting infrastructure.

- Builds and maintains a custom multi-agent orchestration framework using file-queue-based agent loops.
- Architecture: Python-based backtesting engine with exchange connectivity across centralised and decentralised venues.
- Integrates market microstructure analysis tools including liquidation heatmaps and execution quality signals.
- Demonstrates the same hands-on technical curiosity Alasco looks for in AI-supported product work: building, breaking, and evaluating systems rather than describing them.

§ HOW I WOULD WORK AT ALASCO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow customer-facing calls, read existing research and usage data, and map the current discovery-to-rollout workflow against what the Go-to-Market team hears in the field – the goal is a clear picture of where assumptions are untested before I add my own.

WEEK 2

Sharpen one bet.

Pick the highest-uncertainty opportunity from week 1, run two to three targeted customer interviews, and return with a sharpened problem statement and a prioritisation recommendation grounded in business value and workflow evidence rather than intuition.

WEEK 3+

Ship, close loops.

Define scope and success criteria for the first incremental delivery, work in tight cycles with Engineering and Design to move from concept to production, and establish the feedback loop – usage signals, customer input, Go-to-Market telemetry – that will drive the next iteration.

I COVER LETTER

Alasco is building software for a domain where the stakes are high, the workflows are genuinely complex, and the users – investment managers, construction controllers, financial planners – have spent years managing decisions with tools that were not built for them. That is not a positioning statement I take at face value; it is a product challenge I recognise from experience.

At Rohde & Schwarz I built a central AI and data management platform for a European defence programme. The users were data scientists and ML engineers who needed curated, auditable, reproducible datasets. The challenge was not the technology – it was understanding their actual workflows, surfacing the assumptions behind existing processes, and translating that into requirements the engineering team could act on with confidence. I delivered autonomous feature sets end-to-end, including a GitOps-based rollout that reduced deployment times from several days to under forty minutes. At the Federal Employment Agency I owned the Arbeitsmarktmonitor, an analytics platform for regional labour market data, where I served simultaneously as product manager, Deputy IT Security Officer, and the person responsible for

migrating legacy infrastructure to Kubernetes – a breadth of ownership that forces exactly the kind of trade-off thinking your posting describes.

What these roles share with the Alasco problem space is complexity that does not simplify cleanly: multiple stakeholder groups with competing priorities, data that needs to be trustworthy before it can be useful, and product decisions made under incomplete information. I am most effective in this kind of environment because I am comfortable holding ambiguity long enough to make good decisions rather than fast ones.

On AI in product work: I use it daily – Claude Code and GPT for spec generation and edge-case analysis, Lovable and Framer for rapid prototyping, n8n and custom agent frameworks for workflow automation. More importantly, I have thought carefully about where AI creates real value for users and where it introduces new failure modes they cannot see. At Rohde & Schwarz I worked directly on SafeAI and ExplainableAI concepts for ML training pipelines – not as a theoretical exercise but as a product requirement for a stakeholder group that needed to trust the outputs before they would act on them. That experience maps directly to the evaluation criteria, feedback loops, and user-facing guidance your posting specifically calls out.

I speak German natively and English at C2 level. I am open to relocating to Munich. I am genuinely interested in what Alasco is building, and I would welcome a conversation about how I could contribute.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience building B2B SaaS products end-to-end – from discovery and stakeholder alignment through to production rollout and iteration. Background spans AI data platforms in regulated defence environments, public analytics infrastructure, InsurTech, and healthcare, with consistent emphasis on complex operational workflows, data integrity, and cross-functional delivery. Comfortable operating where requirements are incomplete, priorities shift under external pressure, and teams need a clear decision framework rather than a process to follow. AI-native by practice: daily use of LLM-assisted development, rapid prototyping tools, and agentic workflow automation.

§ CORE STRENGTHS

- B2B SaaS product ownership from discovery to iteration
- Assumption mapping and prioritisation under incomplete information
- Structured discovery: customer interviews, problem sharpening, early validation
- Cross-functional alignment across Engineering, Design, QA, and Go-to-Market
- AI in product: practical evaluation criteria, feedback loop design, human-in-the-loop workflows
- Data-rich workflow analysis and requirements engineering
- Delivery ownership: backlog management, sprint discipline, success metrics
- Technical fluency across modern infrastructure and data systems
- Founder-level pragmatism, low ego, high agency

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned product definition for a central AI and data management platform within the FCAS European defence programme – a high-stakes, multi-stakeholder environment with strict auditability requirements.
- Defined evaluation concepts for ML training and model outputs, including SafeAI and ExplainableAI frameworks, in direct collaboration with data scientists and ML engineers.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps; independently unblocked an infrastructure-level issue in OpenShift that had been stalled for over a year.
- Led cross-functional delivery team: architect, data scientists, backend and frontend engineers, QA, and multinational stakeholders.

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor, an analytics platform for regional labour market and demographic data used by policymakers and researchers.
- Delivered new features including labour shortage analytics, flexible regional comparison tooling, and modernised admin workflows – each scoped, prioritised, and shipped in incremental cycles.
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual processes with reproducible pipelines.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage.
- Managed major Kubernetes migrations and standardised CI/CD with full test integration at build time.

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product delivery across an InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters – reducing insurance product time-to-market from over one year to under one week.
- Designed and delivered a Claims Center module from concept to production, including full discovery, scoping, and rollout.
- Re-established sprint discipline and delivery stability after a period of structural instability; restructured a 17-person team into smaller Scrum units with clear ownership.
- Regained client trust in a prototype-stage environment through structured weekly product workshops and transparent communication of trade-offs.
- Reintroduced velocity tracking and structured refinement practices; reduced senior developer attrition from near-total to a single departure.

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Built a mobile-first pilot application for hospitals across iOS and Android, delivering core flows for digital anamnesis, meal and therapy plans, transport, patient chat, and document storage.
- Integrated CGM interface into hospital information system (KIS) workflows under strict API constraints.
- Managed stakeholder expectations by making technical complexity – legacy APIs, external databases – explicit and actionable rather than opaque.

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- Designed the end-user experience with a target of sub-two-minute setup requiring no technical knowledge – a direct product constraint that shaped every architectural decision.
- Served as deputy IT security officer, responsible for attack vector mitigation and security governance.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded and built a group-based P2P payment product on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype.
- Later acquired and operated by Sparkasse.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder / CDO / CFO / Project Lead

- Established digital tooling, financial and investment planning, and HR infrastructure for a deep-tech agri startup.
- Built and maintained investor relations through multiple funding stages.
