

Philipp Hilbert. *Head of Product for public-interest AI ecosystems.*

Positioning, 13 years shipping technical products across regulated industries, now focused on AI platforms built for the public good.

§ WHY CURRENT AI

Current AI is building infrastructure for AI that serves the public, not just the market. AI Potluck, Alpha, and the Gap Map are exactly the kind of ecosystem-level bets that require a product person who can hold technical depth and strategic vision at the same time. The Alpha Public Router, in particular, is a product with real developer-facing complexity, routing logic, partner APIs, interoperability constraints, that I have shipped analogous work on before. The 2027 roadmap challenge of aligning partners, grantees, and engineering around a shared direction is a problem I find interesting, because it is hard in the right way. *That is the kind of product surface where I do my best work.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec and refactor work
- **GitHub Copilot**, day-to-day code assistance
- **Cursor**, VSCode-based AI-assisted development
- **Lovable**, rapid front-end prototyping
- **n8n**, agentic workflow automation
- **GPT**, drafting, research, evaluation loops
- **Gamma.app**, stakeholder decks and roadmap comms
- **Framer**, design-heavy prototyping

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, Docker, ArgoCD, GitOps, Jenkins, CI/CD, GitLab, Azure DevOps, REST APIs, Python, Kotlin (Spring Boot), Django, PostgreSQL, MongoDB, Kafka, Dagster, dbt, SQL, Git, all in production contexts across defence AI, public-sector analytics, insurance SaaS, healthcare, and fintech.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A two-sided B2B marketplace taking the headhunter out of construction staffing.

- Matches construction firms with workers directly, with an anonymity-until-payment model that protects both sides until commitment.
 - WhatsApp and Telegram as the primary product surface; LLM agents run the funnel end to end.
 - Built zero to one alone, with funnel and conversion analysis in SQL.
 - Demonstrates the builder mindset this role calls for: ecosystem thinking, agentic automation, and shipping alone under constraints.
-

§ HOW I WOULD WORK AT CURRENT AI

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Talk to every partner organisation currently using Alpha, read the existing Gap Map and Public Router documentation, and identify where the roadmap is blocked by unclear ownership versus unclear requirements.

WEEK 2

Slice and validate.

Pick the two or three highest-friction points in Alpha's path to everyday use inside partner organisations, write concrete user stories around them, and get engineering and partners aligned on what "done" looks like.

WEEK 3+

Ship and communicate.

Push the first incremental release through the Public Router, write the release notes, and establish the partner communication cadence that keeps the 2027 roadmap from drifting.

I COVER LETTER

Dear Current AI team,

I am applying for the Head of Product role. I have 13 years of product ownership across regulated, high-stakes environments, defence AI, public-sector analytics, insurance, healthcare, and fintech, and I am now looking to apply that experience where the stakes are societal rather than commercial.

What draws me to Current AI is the specific challenge of AI Potluck: building a public-interest AI stack that is interoperable by design, not just as an afterthought. At Rohde & Schwarz I drove the AI and data platform for the FCAS European programme, coordinating a cross-functional team of 15+ engineers and data scientists across multinational partners. The constraint there was not technical, it was alignment. Getting distributed teams, external partners, and internal leadership to agree on a shared roadmap is exactly the work this role describes, and I know how to do it. I also know that beautiful roadmaps mean nothing if usage does not follow: at Rohde & Schwarz I instrumented two competing workflows and found that the UI-led one recorded exactly zero clicks. I redirected strategy around that finding, and pipeline runs increased 200%.

On the AI-native side, I build with Claude Code, GitHub Copilot, Cursor, Lovable, and n8n daily. I have written user stories that went straight into implementation, run agentic workflows across a full product funnel, and shipped front-end prototypes without a dedicated engineering resource. This is not aspirational, it is how I currently work. Setting the vision for AI coding-tool use while preserving human judgment in critical product decisions is a line in the job description I could have written myself.

The Public Router's developer use cases are a product surface I find interesting. Routing logic, partner API design, interoperability constraints, and ecosystem completeness are hard problems with real tradeoffs. I have owned technically complex platform products before, at the Bundesagentur für Arbeit I migrated a bare-metal national analytics platform to containers, introduced Dagster and dbt for ETL, and saved roughly 75% of the time per data update, all while keeping the platform available to policymakers. That is the kind of unglamorous but high-leverage infrastructure work that underpins everything else.

I would like to talk about the 2027 roadmap and what "everyday use inside partner organisations" looks like for Alpha in practice.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ PROFILE

Product manager and product owner with 13 years of product ownership in regulated industries, including AI systems, public-sector analytics, defence, insurance, healthcare, payments and retail. I run continuous discovery, turn strategy, user needs and technical constraints into requirements and a prioritised roadmap, and lead cross-functional teams through agile delivery (Scrum, Kanban, SAFe).

§ HOW I WORK

- I leave my ego at home. I want to drive the decision, not to have the last word.
 - On a new product I spend a little to learn before spending a lot to build. Cheap experiments make expensive decisions safe(r).
 - Outcome over output. Producing something is not the achievement; it also has to fit a market, so I agree what would count as success before we build and check afterwards whether it happened.
 - I keep the whole value chain in view, not just the backlog. Defect-to-fix time is a product metric; architects and DevOps engineers build that chain, my job is to steer it into the right lanes.
-

§ WORK EXPERIENCE

PRODUCT MANAGER, ROHDE & SCHWARZ, MUNICH / REMOTE |
07/2024-05/2025

Defence and aerospace. Internal AI and data platform for the FCAS European programme.

- Championed GitOps delivery and test automation with ArgoCD, reducing rollout time from days to 30 minutes across multinational teams, making the platform hotfix-capable.
- Redirected product strategy based on user workflow analysis, increasing pipeline runs by 200% by prioritising developer-code-first over UI-led design.

- Spearheaded the internal AI and data platform for the FCAS European programme, managing a cross-functional team of 15+ engineers and data scientists through Scrum in Jira and Confluence.

PRODUCT MANAGER, BUNDESAGENTUR FÜR ARBEIT (FEDERAL EMPLOYMENT AGENCY), NUREMBERG / REMOTE | 05/2023-07/2024

Public sector. National labour-market analytics platform for policymakers and researchers. Deputy IT Security Officer.

- Introduced Dagster and dbt so quarterly imports and new indicators ran without hand-holding, saving almost 75% of the time per data update.
- Migrated a bare-metal system fully into containers, giving the team autonomous control of its own environments, while carrying a full UI relaunch and a large ETL migration through the same period.

PRODUCT OWNER, CLINET PLATFORMS, BERLIN | 01/2023-07/2023

Healthcare. Mobile patient app for iOS and Android, piloted in hospitals.

- Cut the roadmap to the top 10% of features against agreed success measures: user acceptance rose more than fivefold.
- Implemented the CGM interface into KIS workflows, reducing digital anamnesis time from 30 minutes to 5.

PRODUCT MANAGER, EMIL GROUP, BERLIN | 04/2022-12/2022

Insurance. B2B SaaS platform for insurers, reinsurers, brokers and underwriters.

- Restructured an 18-person delivery organisation into three lean teams: attrition fell from near-total to a single departure.
- Shipped the Claims Center from concept to production with no precedent and cut time-to-market for new insurance products from months to under a week.

PRODUCT OWNER INTEGRATION TEAM, SCHEIDT & BACHMANN FUEL & CONVENIENCE RETAIL, MÖNCHENGLADBACH | 09/2021-03/2022

Retail and payments, POS and forecourt systems. Moved research into production in a fully SAFe setup with agile release trains and PI planning.

PRODUCT OWNER (INTERIM), BUNDESDRUCKEREI, BERLIN | 03/2021-06/2021

Government, secure data platform. Data structures and identity management for the Robert Koch Institute programmes DIM and DESH.

PRODUCT OWNER (PROXY), AOK ITSCARE, FRANKFURT | 03/2019-05/2020

Health insurance. Migrated a legacy system to Shopware for three AOK insurers and roughly 20,000 employees; still in production.

§ FOUNDER TRACK

FOUNDER AND PRODUCT MANAGER, CONSTRUCT8, LIMASSOL | 12/2025-PRESENT

Construction staffing, two-sided B2B marketplace. Zero to one alone with LLM agents across the funnel and WhatsApp/Telegram as the product surface.

- Built anonymity-until-payment model protecting both sides; funnel and conversion analysis in SQL.

CO-FOUNDER AND PRODUCT OWNER, QCRYPT AG, BERLIN | 01/2016-12/2021

IT security, quantum-secure encryption hardware and software.

- Shipped a three-layer product that installs in under two minutes for enterprise buyers unwilling to accept long installations. Later Chair of the board.

FOUNDER AND CFO, KVITT PAYMENT SOLUTIONS, BERLIN | 02/2013-11/2018

Fintech, mobile group-based P2P payments. Built from zero to acquisition by Sparkasse inside the girocard ecosystem.

§ SKILLS

AI Products and Tooling: LLM (large language model) agents, agentic workflows, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI (XAI); full prototyping with Claude Code, GitHub Copilot, Cursor and Lovable.

Product Management: continuous discovery, product vision and product roadmap, prioritisation, MVP definition, PoC, A/B testing, user research and interviews, user stories, prototyping, product lifecycle management, go-to-market support.

Product Ownership: requirements engineering, user stories, acceptance criteria, definition of done, epics, backlog refinement, sprint planning, story-point estimation, velocity and burndown, UAT, Jira, Confluence, Figma, Miro.

Agile and Scaled Delivery: Agile, Scrum, Kanban, SAFe, ART, PI planning.

Technical Environments Owned: Kubernetes, OpenShift, Docker, ArgoCD, GitOps, CI/CD, Jenkins, GitLab, Azure DevOps, REST APIs, Python, Kotlin, PostgreSQL, MongoDB, Kafka, Dagster, dbt, SQL.

Analytics and Data: funnel and churn analysis, KPI definition, ETL, Dagster, dbt, PostgreSQL, Matomo, MicroStrategy.

Stakeholder and Leadership: stakeholder management, cross-functional team leadership, C-level reporting, workshop facilitation, conflict resolution, change management.

Governance and Business: GDPR, Deputy IT Security Officer, identity management, budget ownership, ROI reasoning.

§ EDUCATION

DIPLOM-WIRTSCHAFTSINGENIEUR (INDUSTRIAL ENGINEERING AND MANAGEMENT, EQUIVALENT TO A MASTER'S DEGREE), TECHNISCHE UNIVERSITÄT BERLIN (TU BERLIN), GERMANY | 10/2006-09/2014

- Specialisation: Logistics. Thesis with Siemens AG Energy Service on balancing-power market profitability.
