Dear Dental21 team,

I am applying for the Product Owner role at Dental21. I have 13 years of Product Owner and Product Manager experience in regulated industries, including healthcare (CLINET Platforms, Waldburg-Zeil Kliniken, AOK ITSCare), insurance, defence AI, and public-sector analytics. I know how to own a backlog, run Scrum ceremonies, and translate stakeholder input into User Stories with precise acceptance criteria.

At CLINET Platforms, I inherited a backlog a five-person team could not realistically deliver. I cut it to the top 10% of features against agreed success measures and user acceptance rose more than fivefold. At Rohde & Schwarz, I managed a cross-functional team of 15+ engineers and data scientists through Scrum in Jira and Confluence while delivering an AI and data platform for the FCAS European programme. I understand how to keep Sprint Planning focused and how to identify impediments before they slow a team down.

Your posting specifically asks for experience developing and managing AI-powered products. At Rohde & Schwarz I owned an internal AI and data platform. At construct8, my current project, I run LLM agents across the product funnel so one person can operate the day-to-day. I use AI tooling daily for spec generation, user story drafting, edge-case analysis, and rapid prototyping. I can speak concretely with your development team about where AI integration adds real value and where it adds noise.

On the technical side, I have hands-on experience with APIs, microservices, containerised environments, and GitOps workflows. I have also worked as a Deputy IT Security Officer, which means I understand data governance and the constraints that come with regulated products. Both are relevant when building AI-powered tools in a healthcare context.

German is my native language and my English is C2. I can switch between both in the same sprint review without friction. I am based in Berlin, available with four weeks' notice, and happy to work hybrid or remote.

I would welcome the chance to talk through how my background fits what you are building.

Best regards, *Philipp Hilbert*
