Dear Ledger team,

Ledger's Earn scope is exactly the kind of product I want to own. Millions of users already trust Ledger devices with custody. The next step, helping them put those assets to work without giving up that custody, is a genuine value proposition, not a feature bolt-on. The challenge is delivering yield products that clear a high regulatory bar, integrate cleanly with the hardware layer, and still feel simple enough that a non-technical user finishes the flow.

I have 13 years of product ownership in regulated environments. At EMIL Group I shipped an insurance claims platform from concept to production and restructured an 18-person delivery organisation that was losing engineers and client trust. At Bundesagentur für Arbeit I owned a national analytics platform as Deputy IT Security Officer, ran a full ETL migration, and cut data update time by 75%. At Rohde & Schwarz I drove a cross-functional team of 15+ engineers on a safety-critical AI and data platform, instrumented competing workflows to make a prioritisation call with evidence, and got rollout time from days to 30 minutes. In every case the job was the same: understand what users actually need, align engineering, compliance, and leadership behind a plan, and ship something that can be measured.

On the crypto side, I am not a casual observer. I actively trade perpetual futures and spot across Hyperliquid, Bitget, Jupiter, and 1inch, use Coinglass and Hyblock Capital for market microstructure analysis, and have built a backtesting engine and live trading infrastructure in my own time. I understand staking mechanics, bridge risk, DEX routing, and the incentive structures that yield partners bring to a negotiation. I also co-founded Kvitt Payment Solutions, a P2P payments product that was acquired and operated inside the Sparkasse girocard ecosystem, so I know what it takes to get a financial product past a compliance team and into production. That combination, fintech delivery experience plus hands-on crypto infrastructure knowledge, is what makes the Earn PM role a natural fit rather than a stretch.

I use AI tooling throughout my workflow: Claude Code for in-repo work, Lovable for rapid prototyping, n8n for agentic automation. I can produce roadmaps, PRDs, and decision-ready dashboards that go straight to leadership without editing, because I have had to do exactly that in every role.

I would be glad to talk through how I would approach the Earn roadmap and partner evaluation. Four weeks' notice from offer.

Best regards, *Philipp Hilbert*
