Dear Sumsu team,

I have spent 13 years shipping regulated B2B products, payments, insurance platforms, defence AI data infrastructure, public-sector analytics, and the through-line in all of it is the same problem Sumsu is solving: how do you make compliance workflows fast and reliable enough that they stop blocking growth?

The Reusable KYB role is a concrete brief. You want someone to close the feature gap between KYC and KYB reusability, then build toward corporate identity wallets and reliance networks. I have done the gap-close motion before: at CLINET Platforms I inherited a bloated roadmap, cut it to the top 10% of features against agreed success criteria, and user acceptance rose more than fivefold. At EMIL Group I shipped the Claims Center from concept to production while restructuring a delivery organisation that was close to collapse. The pattern is the same, find what actually moves the metric, cut everything else, ship it.

On the technical side, I am comfortable in the REST API, webhook, and microservices layer that KYB workflows run on. At Rohde & Schwarz I owned a GitOps-based AI and data platform for the FCAS programme and drove rollout time from days to 30 minutes through ArgoCD pipelines. At the Federal Employment Agency I ran a full ETL migration from bare metal to containers while keeping a national analytics platform live. I can talk to your engineers about token architectures and webhook reliability without needing a translator.

The B2B RegTech angle is also where my crypto and fintech background adds something specific. Kvitt Payment Solutions, which I co-founded, was acquired into the Sparkasse girocard ecosystem, so I have built a regulated payment product from zero through acquisition. I follow GLEIF's LEI ecosystem and eIDAS 2.0 closely because they define where B2B digital identity is heading, and they inform how I would think about the long-term roadmap for corporate wallets and reliance networks.

What I bring to Sumsu is not a KYB specialist background, I will say that clearly. What I bring is 13 years of turning complex regulated workflows into shippable, measurable product, a track record of earning engineer trust quickly, and the drive to own a product line end to end. If you want someone who will run discovery with your B2B customers on Monday and be in sprint planning with engineering on Tuesday, I am ready.

Best regards, *Philipp Hilbert*
